ANNUAL REPORT
OF THE
BOARD OF EDUCATION
AND THE
Superintendent of Public Instruction
OF NEW JERSEY.

REPORT OF SUPERINTENDENT OF SCHOOL CENSUS.

For the School Year ending June 30th, 1893.

PART II.

977.001
E 31

REPORT

OF THE

SUPERINTENDENT OF SCHOOL CENSUS.

TRENTON, N. J., September 1st, 1893.

To the State Board of Education:

GENTLEMEN—I have the honor of herewith transmitting to your honorable body, as required by law, my annual report as Superintendent of the School Census for the year 1893.

The annual school census was taken under the following rules and regulations, which were approved by the Committee on Education of your Board, to whom special supervision of the school census was referred :

1. The census must be taken during the month of May and closed on the thirty-first day of May, and must include only those children who are between five (5) and eighteen (18) years of age on that day ; therefore no one who is eighteen (18) years of age on or before the thirty-first day of May of this year can be included in this census, nor can anyone be included who is not five (5) years of age on or before the thirty-first day of May, even if they lack but a single day.

2. Children who are inmates of poorhouses, asylums or almshouses must *not* be included in this census. Children absent from home attending colleges, boarding schools and private seminaries of learning shall be included in the census list of the city, town or district in which their parents or guardians reside, and not be taken in the city, town or district where they may be attending such institutions of learning.

3. In cities the census must be taken by blocks. The enumerator must start on a corner and go entirely around the block, returning to the place of beginning before starting on another block, and must

not cross the street except in cases where there is only a single house or at most two houses on the opposite side of the street. In cases where families are not at home the streets and numbers should be noted and the enumerator must call again. Names thus taken should be entered in census-book, under a proper heading, after names taken by blocks.

Chapter XIV., Laws of 1892, provides "that there shall be taken during the month of May in each year an exact census of all children residing in the several school districts in this State, between the ages of five and eighteen, not including the children who may be inmates of poorhouses, asylums or almshouses, and shall specify the names, ages and residences of such children and the names and residences of their parents or guardians."

In addition to the above information required by law to be taken, the Committee on Education of your Board directed the following to be obtained, viz.:

1. Children attending private schools.
2. Children attending no school during the year.
3. Children over ten years of age unable to read.
4. Children under fifteen years of age employed in factories.
5. Children unvaccinated.
6. Children whose male parent or guardian is not a citizen.
7. Children who are deaf-mutes.

Number of children in the State of New Jersey of school age from five (5) to eighteen (18) is:

Males.....	215,805
Females	208,067
Total.....	<u>423,872</u>

Being an increase of 18,650 over the number of children reported for the year 1892.

The following table shows the number of children reported in each county in the State this year, the number reported last year, and the loss or gain in each:

For each district (city by wards), township and county in the State, there is reported in the annexed table, entitled "School Census by Districts," the number of males, females and total number, at each age from five (5) to eighteen (18); the total number in the district, the number reported last year, the increase or decrease in district, the number attending private school, attending no school during the year, children over ten (10) unable to read, children under fifteen (15) years of age employed in factories, mines or stores, children unvaccinated, children whose male parent or guardian is not a citizen, and the number of children who are deaf-mutes.

Respectfully submitted,

JOHN J. MATTHEWS,

Superintendent of School Census.

SCHOOL CENSUS,

BY DISTRICTS.

ATLANTIC COUNTY SCHOOL CENSUS, BY DISTRICTS.

Number of district.	COUNTRIES, TOWNSHIPS AND DISTRICTS.													Increase.	Decrease.	Number of children attending private schools.	Number of children attending no school during the year. REPORT
OF THE
New Jersey School for Deaf-Mutes.
1893-1894.

WESTON JENKINS, SUPERINTENDENT.

NEW JERSEY SCHOOL FOR DEAF-MUTES.

TRENTON, November 1st, 1894.

To Addison B. Poland, State Superintendent :

SIR—I have the honor to submit the following report of the New Jersey School for Deaf-Mutes, for the year 1894 :

The work of the school has proceeded along the lines indicated in my last report, but certain features of the course have received especial attention, and additional branches have been tentatively introduced.

The teaching of speech and of speech-reading to an increasing number of our pupils has been and still is followed with generally-gratifying results.

It is true that artificial speech in many of these cases is harsh in quality and falls far short of entire intelligibility, and that, as a means of intercourse, it often needs to be supplemented by pencil and paper. Still, even in the less successful cases, the deaf person so taught succeeds in establishing oral language as the medium of intercourse between himself and his immediate family circle, and in making himself understood by those who are brought into closest relations with him in social or business matters.

The improved methods of teaching, the formation of articulate speech—methods based on anatomical study and on the principles of pedagogic science—have made it possible to give this instruction without spending an excessive time in long and exhausting vocal drills, as was formerly the case. When the acquisition of speech—even very imperfect speech—by the deaf child implied the sacrifice of general information and mental training which could be attained by confining the study of language to the written form, it was with much justice that many of the wisest educators of the deaf felt that articulation-teaching was of very doubtful advantage.

We have not found that our orally-taught pupils have their faculties less thoroughly and symmetrically trained, that they are less fond of their school work, or that they make slower progress in written language than those who have been taught by other methods.

It is far from certain, however, that all the deaf may with advantage be taught orally. There are cases in which the vocal organs are so intractable and the perceptive ability necessary for speech-reading

is so far lacking that the time necessary to secure any appreciable results in this direction is more than can be spared from other studies.

The kindergarten training is based on principles which, it would seem, should apply as well to the development of deaf children as of those who hear. Of course, many of the ordinary methods and games cannot be used in classes of deaf children, as they appeal chiefly to the ear. Again, as the minimum age for admission to this school is eight years, it is evident that much of the kindergarten work is too childish to be taken seriously by our pupils. And the kindergarten has not been exempt from the misfortune which befalls a movement when it solidifies into an institution.

Earnest and sincere workers have taken for an end what was never meant to be more than a means, and have come to measure the benefit to the child in terms of the quantity of material used up rather than to look for evidences of a clearer brain and a purer heart.

But if the teacher of the young deaf child will start in the spirit of the true kindergartener, and, accepting what is ready to her hand from the results of others' labor, will adapt it to the special needs of her pupils, and will go on to develop the principles of child-culture in the direction of her work, much benefit may be expected.

A beginning has been made in this school in this direction, and seems to promise excellent results.

The modifications in the usual kindergarten methods have been chiefly in the direction of making the work naturally a subject of conversation and so of practical instruction in language, the greatest need of the deaf child. The customary work in weaving, making paper rings, &c., is largely replaced by the construction of models, in paper, of houses, trees, household utensils and articles of furniture and other familiar objects. The names of these are taught, and each article is made the subject of conversation, the pupil's interest being secured by his own share in the creation of the representation of a thing which is identified with his past experiences.

Often there will be suggested to him a recollection which he will wish to make known to his teacher and a powerful incentive is thus supplied towards original expression.

The construction of these models and also of simpler geometrical solids is a valuable preparation for manual training, cultivating as it does the sense of proportion and accuracy of execution.

The subject of industrial training has occupied the attention of the management of the school during the past year.

A building designed to provide suitable quarters for this department is now near completion, and when fully equipped will offer facilities in this direction excelled by no school of the kind in this country, the number of pupils being taken into account.

The plan contemplates instruction in printing, shoemaking, wood-working, sewing, machine-knitting and tailoring. In all the branches except the two last named, instruction is already given, but the

quarters heretofore occupied have been too narrow, and the equipment has been too scanty to allow the best results to be obtained. Still, under these disadvantages, our printing department has been able to issue regularly a little illustrated paper which has been pronounced by competent judges fully equal in make-up to anything turned out from an institution press anywhere in this country.

With an adequate equipment and with capable and faithful instructors, the school should be able to do much more for its pupils in this line than it has hitherto done. It is not believed that in a school of this kind boys and girls can or should be trained to full efficiency as journeymen workmen in the different trades. Do what the instructors may, the exact conditions of the workshop cannot be reproduced in the class-room. The perfect facility in the use of tools, the numberless little devices for doing work in the quickest and easiest way, come only by long practical experience. But accuracy in execution, concentration of mind and vigorous exertions in the performance of work are lessons which the school well can teach and which will fit the pupil to become a workman of superior merit when he has passed through the further training of the factory or the workshop.

An instance of the value of this training is afforded by one of our pupils who left school two years ago, and entering a printing office has, by repeated promotions, gained the position of foreman in spite of his deafness.

A competent mechanical instructor should therefore be more than a mere mechanic. Mechanical skill he certainly must have, but equally essential, at least, is a knowledge of teaching and the capacity so to teach his art that it shall make a part in the symmetrical development of his pupils' mind and character.

Physical training is a branch of education of which the deaf stand in special need, yet up to the present time this school has been entirely without facilities in this direction.

The deaf are, perhaps, as a class, of inferior physique; their infirmity is in many cases due to disease which, attacking the mucous surfaces of the throat and ear, has left those parts specially weak; their lungs are generally somewhat enfeebled from partial disuse, and from lack of the warning given by the hearing they are very apt to form slovenly habits of walking.

It is a curious fact and one of which the reason is obscure, that deaf persons generally find a certain difficulty in walking with steadiness in the dark. It is, by the way, an equally singular fact that they are generally less liable to seasickness than hearing persons are.

The new building above mentioned will, when completed, furnish ample room for physical training, the whole basement being reserved for use as a gymnasium.

With systematic and well-planned instruction, there is no reason why our pupils should not profit by it as much as those of a Western school for deaf-mutes who were examined by a specialist and were

pronounced the best-developed body of youths he had ever found in any school.

A stereopticon and a number of views have been purchased during the year and have been found of the greatest value. The flashing of the picture upon the screen before their eyes never fails to awaken the interest of the pupils in the subject, and lessons given by the aid of this instrument sink deeper into their memory than those conned from books. In this way the hours of recreation may be utilized for instruction, which is all the more effective as it comes in the guise of amusement.

It is gratifying to be able to report, in various directions, substantial progress. The needs of the school, under existing circumstances, have been fully met by the liberality of the State. I can confidently say that those employed by the State in the education and care of the deaf are working faithfully to the best of their ability, and I trust that the results reached commend themselves to those in authority and to the public at large.

Very respectfully,

WESTON JENKINS,

Principal.

REPORTS

ON

Manual and Industrial Training

FOR THE

STATE OF NEW JERSEY.

1893-1894.

(217)

REPORT OF MANUAL AND INDUSTRIAL TRAINING FOR THE CITY OF NEWARK—1893-1894.

[Organized under the Act of 1881, Chapter CXLIV.]

To Addison B. Poland, State Superintendent :

SIR—The Newark Technical School is pre-eminently a school for the industrial classes, since all its students work through the day.

When it is considered what it means to work ten hours a day, attend school five evenings in the week for seven months and a half each year, for four or five years, it can truly be said that the completion of a course of study such as this institution offers, is no child's play, and those who finish it deserve great credit for their fidelity and perseverance. Some find the task too difficult to accomplish and withdraw after attending a year or two. In addition to the hard work required to complete the course, there is always an element of uncertainty as to the time a student will remain in the school, arising from the condition of the labor market, which has a surplus in one locality and a scarcity in another, so that frequently students withdraw when they have nearly finished the course, by the necessity of securing employment—if without it—where they can get it, or the desire of bettering themselves where it is possible.

Bread and butter must be considered prior to everything else.

From such facts it is not surprising that the attendance shows a considerable falling off between the opening and closing of the school year, and this condition will confront the management of all schools for the industrial classes. That many students who attended two or three years were benefited by the instruction received here is frequently confirmed by communications received from them.

The management is thoroughly convinced that the institution has been a valuable help to many young men in this community, and believes efforts should be made to organize similar schools in other parts of the State.

The management regrets the lack of means at its disposal to carry out the plans for the inauguration of trade departments and the proper equipment of physical and chemical laboratories. It is believed with returning business prosperity funds will be provided

for the proposed extension of and additions to the courses of study, when efforts will be made to furnish instruction in lines more particularly bearing on trades peculiar to this locality.

Toward the building and furnishing fund, the school now has in reserve \$5,983, besides about \$23,000 in subscriptions, which are to be paid when the subscription list reaches \$30,000.

As drawing is the beginning and end of all technical education, much thought has been given to the working out of a proper course in that subject for the class of students in attendance. All students desiring to receive instruction in architectural or mechanical drawing are required to take lessons in free-hand first, as it is considered absolutely essential that the proper execution of an instrumental drawing depends on the ability to make a sketch.

In the instruction in free-hand drawing no attempt is made to produce works of art. The students of the Technical School have not the time to spend filling in backgrounds and softening lines and shadows here and there, all of which is perfectly proper in its place, but adds nothing to the student's dexterity in handling the pencil. Hence such work is purposely omitted, and the student is not encouraged to work for an exhibition which shall be a show. In the two hundred hours given to free-hand drawing, the object is to teach the student to make rapid and sufficiently accurate sketches to work from either in making an instrumental drawing or in executing a piece of work. The same idea is carried out in both architectural and mechanical drawing, no attempt being made to produce pictures, but actual working drawings, such as a person would be willing to pay for, and such as are found in all shops.

As the Technical School has been in operation ten years, a circular letter was recently forwarded to all the graduates, asking a number of questions.

One of these was:

"Has the instruction you received at the school been of any benefit to you?"

Among the replies received were the following:

"—— AVE K, —— N. J.

"*Charles A. Colton, E.M., Director Newark Technical School:*

"DEAR SIR—You will please pardon my giving personal history, for it seems the most convenient mode of expression. About the time of my admission to the school, I conceived the idea of learning to be a machinist, and with the reluctant consent of my parents was apprenticed to the trade. I had no idea of doing anything but learning a trade, but during the fourth year of my apprenticeship, a vacancy occurred in the draughting-room of the establishment and I was selected to fill it, solely through the influence of the fact that I at-

tended the Technical School, for I had nothing else to recommend me. The Technical School has therefore been the means of leading me into a business in which I am greatly interested, and which I never could have entered without the instruction I received there.

"Aside from that, the mental training and development acquired have an almost inestimable value, and have been the means of opening channels of information which otherwise would have been sealed.

"Yours respectfully,
" _____ ."

[The writer of the above is a draughtsman and designer of modern shop appliances.—C. A. C.]

_____ St., Newark.

"Charles A. Colton, E.M., Director Newark Technical School :

"DEAR SIR—My occupation is that of toolmaker, a trade in which all but one of the sciences taught in the school have some application, and I believe, without the knowledge thus obtained, I would be inferior as a workman, for aside from the actual application of that knowledge there is the inevitable sharpening of the wits that makes a person view things in a broader light, so that I truly believe no one can attend the Technical School without deriving benefit from it. The school can only place the tools in his hands, and if through some deficiency of character he lacks the energy to use them, the fault is his, not the school's.

"Yours respectfully,
" _____ ."

_____ St., Newark.

"Charles A. Colton, E.M., Director Newark Technical School :

"DEAR SIR—It has been and is of great benefit to me. It enabled me to learn a trade under difficulties so great that I could not have surmounted them without the instruction received at the Technical School.

"Yours respectfully,
" _____ ."

[The writer of the above is a machinist.—C. A. C.]

Many other letters have been received, all of which testify to the valuable help the Technical School has been to those who have attended it.

Appended is the financial statement for the year ending] April 30th, 1894 :

REPORT OF MANUAL AND INDUSTRIAL TRAINING FOR THE CITY OF HOBOKEN—1893-1894.

[Organized under the Act of 1881, Chapter CXLIV.]:

To Addison B. Poland, State Superintendent:

SIR—The Board of Trustees of the “New Jersey Industrial Education, City of Hoboken,” in compliance with the law as set forth in the act of 1881 of the Legislature of this State, for the establishment of industrial education, under which act this board is constituted, has the honor to submit its seventh annual report.

Such changes as have been made during the past year in the organization of the various departments have been in the line of progress, and yet we still adhere to the general plan of work, the nature of which has been fully outlined in former reports. The past year brought us a marked increase in the number of pupils. An additional room has been fitted up in the Martha Institute for instruction in drawing, for the purpose of supplementing the work of the grammar schools in this branch.

We are obliged to record with great regret the loss suffered by this board in the death of one of our number, Mr. John Reid, who commanded universal respect and esteem, and his services to the educational interests of the city of Hoboken especially endear his memory to its citizens. He had for many years been a member of the board of education, and also a member of the manual training board since its organization.

Edward Russ, Esq., now and for three years past president of the city board of education, was most fittingly appointed to fill the vacancy caused by Mr. Reid's death.

Miss Jeannette Palen, who had been phenomenally successful as our teacher of wood-carving, resigned her position to accept a more convenient and lucrative appointment in East Orange, and we desire to place on record our appreciation of her valuable services, especially in the arduous labors which devolved upon her in the formative work of her department. Miss Palen is a painstaking student, ardently devoted to her profession, thoughtful, original, progressive. We are indebted to her for her unswerving fidelity to the trust we

imposed in her, and for much of the success heretofore attained in our wood-carving department and for our creditable exhibit at the Columbian Exposition and the honorable distinction awarded us.

The vacancy caused by her resignation has been filled by the appointment of Miss Alice B. Perry, a graduate of the State Normal School and a student of the University of the City of New York.

We have undertaken some iron-work in connection with our wood-working department, and it gives promise of success. If our anticipations are realized no doubt the iron-working will be organized into a separate department.

Our work in the several departments during the year may be briefly summarized as follows :

SEWING DEPARTMENT—MRS. P. G. FLEMING, TEACHER.

The course of instruction in this department is carefully graded, not only to insure a thorough knowledge of the subject, but also to impress upon the pupil the value of order, accuracy and economy.

The first lessons given teach the pupil the position of the body, holding the work, threading the needle, wearing the thimble, making knots, and the use of all the necessary articles for sewing.

Our annual exhibition, at the close of the year, is a great incentive to the pupils, inasmuch as all the sewing of the year, in all grades, is shown.

There are nineteen classes in this department, and each of these classes has an average of thirty-eight pupils.

The work of each individual pupil is carefully guided and criticised by the teacher.

DOMESTIC ECONOMY DEPARTMENT—MISS ELIZABETH HUGER,
TEACHER.

We have, daily, two classes well attended—in fact, the attendance had not heretofore been as regular as during the year past, and with a seeming increase of enthusiasm. Never before have we had so many of the parents visit the school as in the past season, and herein lies one of our hopes for the advancement of this branch of manual training, for nothing can be done to change for the better the existing methods of housekeeping, until housekeepers are educated in the science of household affairs.

A Harvard professor is credited with saying, "No man can be a gentleman without a knowledge of chemistry," and immediately all the students fell upon chemistry. Would that some worthy master might authoritatively declare that "No woman could be a lady without a knowledge of the chemistry of the household." What a

glorious prospect would there be opened for the future health of the nation!

The children are taught the simple methods of filtration, sterilization of milk, water, accuracy of measurements, weights, &c.; they are also taught that food, as a subject, may be studied and mastered like any other subject, and the changes it undergoes in its care and preparation are governed by fixed laws.

Much time is devoted to the best and most economical uses of the fresh, as well as the "left-over" materials, which are always more or less to be found in the kitchen. The subject is large and certainly interesting, and even with the limited time in our model kitchen the practical results will be seen and felt in our city homes.

CLAY-MODELING DEPARTMENT—MISS MINNIE B. ARNOLD,
TEACHER.

The work in this department last year began with the study of form as represented by the type solids, the sphere, cube, cylinder, &c. They were first studied as wholes, considering the beauty of outline and proportion. After making them in clay, they are taught to observe these forms in the objects around them, and to express the forms thus observed in clay. After this the flat forms derived from the solids are used as foundation principles in design, arrangements in borders and around a center; also many familiar geometric forms. Some valuable lessons are learned in the beauty of outline and proportion from the study of the kite unit and its variations and arrangements in pleasing designs in low relief.

Drawings were used that would train the eye as well as the hands in the beauty of curves and their application in design, combined with natural forms conventionalized.

Bits of historic ornament are introduced through the use of casts representing some of the characteristic forms of different periods. As the season advances and there is access to natural leaves and plant forms the pupils develop much artistic ability.

There is no medium so well adapted to the needs of the pupils in the expression of form as plastic clay.

It is our aim in the work of this year to develop a love for the work that will inspire the pupils to express (through making) the impressions that are made upon the mind by the close observation of the beauty of the forms with which we are surrounded, and more attention will be given to the study of ornament in history and its application to the architecture of the present day.

WOOD-CARVING DEPARTMENT—MISS ALICE B. PERRY,
TEACHER.

The general subjects of our carving course, and, indeed, all manual training, are to develop the faculties, produce ability to perform work, and the power to enjoy the beautiful.

Our course consists of a series of exercises, carefully graded, divided into two parts—wood-carving as a manual training subject, and wood-carving as an art. The first exercise involves the use of only one chisel, the second of two chisels, and so on, proceeding from the simple to the complex.

We are using the group system so successfully initiated at the Teachers' College in New York City. This is found to work admirably, providing exercises for the faster and more skillful carvers, and at the same time keeping the class together in their work. In no case do we sacrifice accuracy and feeling to speed.

The subjects of the successive groups are the following :

1. Horizontal and vertical planes.
2. Outside bevels.
3. Inside bevels.
4. Grounding and interlacing rectilinear designs.
5. Grounding and interlacing curvilinear designs.
6. Convex modeling.
7. Concave modeling.
8. Sweep curves.

More advanced workers are given designs in Moresque, Norse, Byzantine, Renaissance and Gothic ornament. All the designs are taken from the best styles of art, thus laying a foundation for appreciation of the truly beautiful.

At the most suitable time pupils are instructed in the use of chisels, gouges, &c., how to sharpen them, and are taught the kinds and utility of wood suited to carving. At the close of the course the students carve some useful or ornamental article, thus applying principles previously developed.

The interest is all that could be desired. We know of not one case of indifference to the work among the two hundred and thirty-five pupils. The class teachers in the various schools seem glad to cooperate with our teacher in making the work successful.

WOOD WORKING DEPARTMENT AND MECHANICAL DRAWING—
 JAMES S. BLOOMER, TEACHER.

The work in carpentry and mechanical drawing has been continued on the same general lines that have been followed heretofore; we are adding and pruning each year for the betterment of the system.

During the year in addition to the drawing necessary for the joint work, each pupil drew two sheets of geometric problems, two sheets of isometric projection, elbows of two and four joints, screws and pieces of machinery, and we shall add to these, in the coming year, designs for houses.

We find the pupils entirely without information on the subject of drawing suitable for our work, and wonderfully interested when it is presented in a way they can understand. The effect of our instruction is such that we hope the schools will add something to their course in this study and improve the system now in use.

In the carpentry we are confining ourselves more to the joint work, leaving out, as far as possible, the project work that has occupied so large a part of the very short time the pupil has in manual training, and we are constantly demanding greater exactness in the work done. Of course, one of the common traits of the pupil in this work is the inability to do with exactness anything, and we hold that the ability to do anything "exactly" is a power in education along the lines toward the purpose we have to accomplish.

Looking over the work, the classes during the year have been larger than heretofore and the regular attendance marked; the interest has been unabated.

We have found much help in this department in the custom of the school teachers to use "woods" and "carpentry," and kindred subjects, for their pupils' "compositions."

We herewith present the annual report of the treasurer:

HOBOKEN, December 1st, 1894.

To the Honorable Board of Trustees, &c.:

GENTLEMEN—I have the honor to submit the following report of the funds of your Board for the year ending December 1st, 1894:

RECEIPTS.

To balance on hand November 10th, 1893.....		\$530 74
To mayor and council, appropriation.....	\$3,186 33	
To State comptroller, appropriation	3,186 33	
To interest on deposits.....	35 29	
	<hr/>	6,407 95
		<hr/> <hr/>
		\$6,938 69

DISBURSEMENTS.

By salaries and materials.....	\$4,203 26
By tools and fixtures.....	179 39
By rents and sundries.....	1,266 40
By balance on hand.....	1,289 64
	<hr/>
	\$6,938 69
	<hr/>

ASSETS.

On deposit savings bank, Hoboken.....	\$10 00
Cash on hand	1,289 64
Outstanding bills.....	30 00
Value of tools and fixtures	1,000 00
	<hr/>
	\$2,329 64

Respectfully submitted,
 T. H. McCANN,
Treasurer.

In conclusion we desire to report that we have had very encouraging letters from superintendents, teachers and manual training instructors in nearly every State in the Union, commending our "Primer" and its usefulness, and asking for additional copies of the "Primer" and "Chart." It will be a pleasure for us to send copies to all who may desire to see them.

Very respectfully submitted,

GEORGE T. WERTS, *President.*
 GEORGE C. HOUGHTON, *Vice President.*
 THOMAS H. McCANN, *Treasurer.*
 DAVID E. RUE, *Secretary.*
 EDWARD RUSS,
 MARTHA B. STEVENS,
 NICHOLAS MURRAY BUTLER,
 CHARLES W. FULLER.

REPORTS ON MANUAL TRAINING—1893-1894.

[Organized under Act of 1888, Chap. XXXVIII.]

ATLANTIC CITY.

To Addison B. Poland, State Superintendent:

SIR—I have the honor to submit to you my second report of the manual training department of the Atlantic City public schools, for the year ending June 30th, 1894.

It is very gratifying to say that manual training still continues to grow in favor with our citizens. We have had a number of serious and perplexing questions confronting us. Public sentiment was at first against the continuance of this department; but through careful and well-directed efforts we have overcome these objections, and to-day we realize that it has become one of the strongest factors in our school work. Boys who heretofore were very careless and indifferent in their school work, have demonstrated very forcibly the true educational value of such a training. At present their work is neat, accurate and well arranged. This change is largely due to the systematic training which they received in the shop or mechanical drawing-room.

We have been pushing our work along the same lines as last year, making slight modifications here and there as experience suggested. Believing that the foundation of successful instruction in manual training must be laid in the grades below the high school, we introduced into our schools last February, "White's New Course in Art Instruction." In the various grades below the high school we teach clay-modeling, paper-folding, paper-cutting, color-work, constructions with cardboard, geometric drawings, free-hand drawings and study of historic ornament. When pupils have finished the course in drawing as now taught in our primary and grammar grades, we feel quite confident that they will have the proper training in the preliminary work which will fit them for the manual training department in our public schools.

Considering all the disadvantages which we have had during the past year, I am quite certain that our work, not in quantity but in quality, would compare favorably with other schools.

Below is given the course of study now pursued in our manual

training department. This course is based upon a careful study of our actual need for the present time, but is by no means final. It is subject to change when time and experience may prove the necessity of doing so.

WOOD-WORKING.

(a) *Joinery.*

1. Plant.—
Twelve benches made of pine.
Twelve sets of joiner's tools.
2. Material.—
Pine and whitewood lumber and small amount of hard wood.
3. Character of work.—
Marking.
Exercise in rip-sawing.
Cross-cut sawing.
Chiseling and use of back-saw.
Making of bench hook.
End lap-joint.
Middle lap-joint.
Lap miter-joint.
Mortise-and-tenon joint.
Lap dovetail.
Drawer dovetail.
Door, gate or box.
4. Amount of work.—
Each pupil taking twelve exercises in the course during the year.

(b) *Wood-carving.*

1. Plant.—
The same benches used in joinery.
Twelve sets of carving tools.
2. Material.—
Pine, whitewood, oak and cherry.
3. Character of work.—
Five exercises, outlining with parting tool and gouge in soft wood.
Stippling-work on diaper pattern.
Flat relief.
Carved relief.
Pupils making applications of cuts on picture frames, &c., also in decorating articles made by boys in joinery.
Designing is studied in connection with this work. All designs are original.
4. Amount of work.—
Each pupil carves on an average about eight pieces during the year.

MECHANICAL DRAWING.

1. Plant.—
Sixteen combination drawing and painting desks.
Sixteen sets drawing instruments and tools.
One hundred drawing boards.
2. Material.—
Five hundred sheets white drawing paper, $15\frac{1}{2} \times 19\frac{1}{2}$ inches.
Drawing inks—red and black.

3. Character of work.—
 - Geometrical constructions.
 - Mechanical drawing of cube at different angles.
 - Hollow cylinder with section.
 - Mechanical drawing of some simple object, applying the above principle.
 - Drawing of sample joints for shop use.
 - Drawing of gate or door.
 - Surface development.
 - Cycloidal curves.
 - Developing gear wheels from curves.
 - Developing screw threads.
 - Belting problems.
 - Drawing of machine parts from models, applying principles learned.
 - Drawings are accompanied by and made from free-hand sketches.
4. Amount of work.—
 - Pupils cover about eight sheets during the year.

DESIGNING.

1. Plant.—
 - Same desks used in mechanical drawing.
 - Sixteen sets brushes and cups.
 - One hundred drawing boards.
2. Material.—
 - Water-color and cold-pressed paper.
3. Character of work.—
 - Lay on wash, working to line and lining with brush.
 - Charts for study of colors, hues and scales.
 - Shading of colors.
 - Matching of colors from samples given.
 - Planning of design.
 - Planning of wall paper design.
 - Planning of border to match.
 - Planning of ceiling paper.
 - Planning of frescoe ceiling.
 - These designs are all colored, the color being selected by the pupil.

SEWING.

1. Plant.—
 - Sets of scissors, thimbles, needles, sewing boxes for each class instructed in sewing.
2. Material.—
 - Cotton goods for drill exercises and various cloths for practical applications of steps taken.
 - Thread, sewing silk and yarn.
3. Character of work.—
 - The work in sewing is taken up according to the following steps:
 - Basting, running seams, back-stitching, over-casting, over-seaming, hemming, felling, gathering, binding, patching, darning, grafting, gusset-work, sewing on buttons and making buttonholes.
4. Amount of work.—
 - During the first and second year (fifth and sixth grades) pupils finish from eight to nine steps. In the seventh and eighth grades the above steps are all finished and the same applied in making various articles of clothing.

The increase in our population demands more and better facilities for school work. It is earnestly hoped that the citizens will, in the very near future, grant permission to the board of education to erect a central high school building in which better facilities can be had for manual training.

Our present rooms are too small and must be lighted by electric lights at times. This is a serious disadvantage and can only be remedied by having a new and more modern school building.

FINANCIAL STATEMENT.

Receipts.

1. *Name of teacher.*—L. E. Ackerman and Albion Preble.
2. *Special salary paid.*—Ackerman, \$1,200; Albion Preble, \$343.18.
3. *Is teacher engaged exclusively in this work?*—Yes.
4. *Number of pupils taught.*—Males, 48; females, 57.
5. *Number of lessons per week given each class.*—Three.
6. *Length of lesson.*—Forty minutes.
7. *Grade or grades in which subject is taught.*—Ninth and tenth.
8. *Amount expended during current year.*—Plant, \$; material, \$; salary, \$1,543.18.
9. *Total amount expended to date.*—

MODELING.

1. *Name of teacher.*—L. E. Ackerman.
2. *Special salary paid.*—
3. *Is the teacher engaged exclusively in this work?*—
4. *Number of pupils taught.*—Males, 6; females, 32.
5. *Number of lessons per week given each class.*—Three.
6. *Length of lesson.*—Forty minutes.
7. *Grade or grades in which subject is taught.*—Eleventh and twelfth.
8. *Amount expended during the current year.*—Plant, \$; material, \$; salary, \$
9. *Total amount expended to date.*—

WOOD-WORKING.

1. *Name of teacher.*—L. E. Ackerman.
2. *Special salary paid.*—
3. *Is the teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Males, 54; females, 89.
5. *Number of lessons per week given each class.*—Three.
6. *Length of lesson.*—Forty minutes.
7. *Grade or grades in which subject is taught.*—Ninth, tenth, eleventh and twelfth.
8. *Amount expended during current year.*—Plant, \$.....; material, \$.....; salary, \$.....
9. *Total amount expended to date.*—

SEWING.

1. *Name of teacher.*—Regular class teacher.
2. *Special salary paid.*—None.
3. *Is teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Males, 25; females, 615.
5. *Number of lessons per week given each class.*—One.
6. *Length of lesson.*—One hour.
7. *Grade or grades in which subject is taught.*—Third to eighth grades.
8. *Amount expended during current year.*—Plant, \$.....; material, \$.....; salary, \$.....
9. *Total amount expended to date.*—

Respectfully submitted,

W. B. LOUDENSLAGER,
Superintendent.

CAMDEN.

To Addison B. Poland, State Superintendent:

SIR—During the past three years it has been our expectation to change our present quarters and secure accommodations sufficiently large to take in 200 pupils and besides to give us one more additional work-room, containing iron lathes, shaping machine, &c., in order that our full three-years' course in manual training might be carried into execution; but the best we could do was (in February, 1894) to secure the second and third floors of the adjoining building, thus securing a more commodious drawing-room and three additional class-rooms for the academic department. These additions enabled us to take in two classes (50) of young ladies, who, besides the academic studies, are taught sewing, modeling, the first year's course in joining, &c, and wood-carving; and, I may say in passing, that the young ladies are doing as well as the young men in manual training exercises as well as in mathematics and the other academic branches, and that their presence here has done much to strengthen the school. Our boys and girls, with the exception of the metal-working room, use the same rooms, but are kept in separate classes.

We have made but little change in our manual training course.

In the metal-room, the first-year boys get chipping, filing, fitting, &c.; the second-year boys, the same, with tinsmithing and forging, and the third-year boys, chipping, filing, fitting, &c.; forging and ornamental work in cold iron. The boys' classes average about two hours to two and a half hours in the metal-room, and about the same length of time in the wood-room.

In the first year, the boys have about twenty-nine exercises in joinery; in the second year, turning and pattern-making; in the third year, carving, inlaid work, patterns for parts of the steam engine, &c.

The girls' class during the first year have the twenty-nine exercises in joinery; during the second year, clay-modeling, wood-carving; plain and fancy sewing during the first two years. During the third year, besides continuing wood-carving, clay-modeling in an advanced course, the girls will also be taught the elementary forms of modeling with sticks, paper, cardboard, clay, &c., to fit them as teachers in the primary schools. The girls receive manual training instruction three times a week (lessons forty-five minutes each), besides five hours in drawing and one hour in sewing.

In drawing, we give a full course in geometric drawing, orthographic projections, isometric projections, the principles of descriptive geometry, perspective, free-hand from objects and groups and design, besides working drawings; the use of washes, &c., color-study, &c. In modeling in clay, pupils fashion from plaster casts, wooden models, and from their own designs.

In regard to the manual training work in the grammar and primary schools of our city, we still adhere to our belief that the special benefits of this work are derived from "form study," and by selections from the kindergarten (but not instructing in the kindergarten methods) of stick-laying, paper-folding, paper-cutting; and cardboard construction, design-work in colored paper, besides modeling in clay, &c. We are trying to cultivate the eye and the hand, and to call forth the observing powers of the pupil, and follow up these exercises by teaching the child to draw directly from the thing—the object or model.

We have been greatly aided in our efforts in this line by the action of the commission of public instruction. By this action, each of our regular teachers receives ten lessons in model-drawing from a competent drawing teacher under the direction of the manual training supervisor, and by further action primary manual training is made a requisite of qualification to secure a teacher's certificate of any grade.

The course in sewing consists of exercises on perforated cardboard for the little people, and a course of plain sewing taught to the girls from third grade to the eighth, inclusive, by the regular teachers.

In several of the schools, folding-tables, 7 feet by 28 inches, accommodating from eight to twelve pupils, have been introduced, and we find them a great advantage. In some instances, too, cases with

glass doors, showing some of the best samples selected from pupils' work, are placed where pupils and visitors may see them. These cases, besides keeping the work clean, afford also space for keeping wide paper and other material in a good condition; and not least, this care, &c., impresses the pupils with an idea of the importance of the work that leads to greater care and ambition on their part.

With the exception of not securing another building for our manual training high school, we feel very well satisfied with the present condition of manual training in our city. It continues to meet with the approval of our citizens, and is, each year, becoming better understood by them.

Where manual training fails, it will, I am pretty sure, be found to be on account of its being kept as an isolated department from the academic rooms; under such conditions it must fail; it cannot be treated in the same way as technical instruction; it must be taken in as an integral part of the school—give to and take from the other class-rooms. In our school the teacher in the wood-room, metal-room, &c., is treated by the principal in the same manner as the other assistants are treated—the teacher of history, of algebra, &c. To avoid failure, one must never lose sight of what manual training is, and what it is expected to do—its educative value; but we must not be forgetful or unreasonable and expect too much from manual training, or expect much or little too soon; this phase of education has been 200 years or more in reaching its present stage. We all know how slowly results of this nature are achieved. I am satisfied with what I have seen—experience. This instruction will produce a better hand, a better eye, and increased power of observation; and these results will be most strongly shown in the collateral branch—drawing; and, further, it is my belief after twenty-six years' experience as public school teacher, that this is the only channel through which it is possible to teach the masses drawing.

Hand manipulation for better-trained hand and eye and observation, drawing for accurate expression—perhaps correct English might not be so far off; but those that handle manual training must do so as teachers and not as mechanics. The class working shows all; the finished product may show nothing.

For the cultivation of certain mental traits—accuracy or precision, order or relative position, &c.—the study of the *elements of music*, *sight reading*, &c., might properly come within the classification of manual training, but one thing at a time, and the one thing at this time upon which I would urge our public school teachers is the proper handling of drawing. Object or model-drawing and instrumental drawing may be taught, if the teacher will qualify herself, and such work will produce results; but it has long since been demonstrated by theory and proven by practice that merely copying or drawing “from the flat,” as the courses are laid down in the drawing-books is expensive in time, in money, in effort, and barren

in results. Of course to teach to draw from the object requires trained teachers, and it is no easy task, without the co-operation of the teachers themselves, to add this grand qualification to an old corps of teachers that did not receive this training in their youth.

We have good reports of the fourteen young men that graduated from the manual training school last June.

The accompanying sheets contain a brief outline of the courses of study, and an inventory of our plant, materials, &c., &c.

MANUAL TRAINING COURSE.

The following in the primary and grammar schools lead up to the course in the central manual training school. (The course for the eight grades will be revised at an early date):

FIRST GRADE.

Modeling.—The sphere, cube, cylinder, hemisphere, square prism, triangular prism, and related forms.

Stick laying.—Lines, angles, squares, triangles, and their repetitions.

Tablet laying.—Simple borders and patterns, using the circle, square, oblong, semicircle and triangle.

Drawing.—Figures as developed above; the outlines of leaves and other simple objects.

Color.—The three primary colors, using colored papers, and colored crayons on the board.

Samples of work to be preserved by the teacher.

SECOND GRADE.

Modeling.—The same as in first grade, only fuller and more accurate.

Stick laying and Tablet making.—Same as in first grade, only fuller and more accurate. Laying of simple designs.

Drawing.—The same as in first grade, only fuller; simple designs. Pupils must be taught to discriminate from the form-models and objects—1. Surface—plane and curved. 2. Edge or line—straight and curved. 3. Shape—square, oblong, inch, triangle. 4. Corner or angle.

Color.—The same as in first grade.

Samples of work to be preserved by the teacher.

THIRD GRADE.

Modeling.—The cube, cylinder, prism, cone, pyramid, related forms, (fruits, &c.)

Stick laying and Tablet laying.—Polygons, designs, borders, patterns.

Drawing.—Figures developed above; relative forms; simple related forms in nature, and simple household objects.

Color.—Green, purple, orange, using colored papers, colored chalk on board, colored yarns.

Paper folding and Cutting.—Figures mentioned and developed above; cut from paper of the six colors already mentioned.

Sewing.—Correct use of the needle, even and uneven basting.

Samples of work to be preserved by the teacher.

FOURTH GRADE.

Modeling.—Forms already taught, oval, ellipsoid, and vase forms, related forms (fruits, simple objects).

Stick-laying and Tablet-laying.—Designs.

Drawing.—Forms and figures already mentioned; simple objects and designs, &c.

Color.—Colors already taught, indigo and violet.

Paper-folding and Paper-cutting.—Simple geometric figures and objects, relative designs.

Sewing.—Seaming, running, fine-running, stitching and back-stitching.

Samples of work to be preserved by the teacher.

FIFTH GRADE.

Modeling.—Forms related to the type forms.

Stick-laying and Tablet-laying.—Designs.

Drawing.—From objects; designs.

Color.—The prismatic colors.

Paper-laying and Tablet-laying.—Designs.

Drawing.—From objects; from the flat; designs.

Color.—The prismatic colors.

Paper-folding and Paper-cutting.—Geometric figures; designs.

Sewing.—Overcasting, over-seaming, hemming, felling, gathering.

Samples of work to be preserved by the teacher.

SIXTH GRADE.

Modeling.—Rapid work with the geometric type forms; relative forms. Simple relief forms.

Drawing.—From objects; designs. Free-hand sketching on board, slates and paper, introductory to working-drawings.

Color.—Shades and contrasts.

Paper-cutting and Model-making.—From folded and delineated forms. Geometric solids from stiff paper or cardboard.

Sewing.—Sewing on bands, patching, darning.

Samples of work to be preserved by the teacher.

SEVENTH GRADE.

Modeling.—Rapid work with the geometric type forms; relief forms, &c.

Drawing.—From objects; designs. Elementary drawing with straight-edge and dividers. Working-drawings from free-hand sketches. Vegetable forms. Half-tinting. Shades and contrasts. The use of colored crayons.

Paper-cutting and Model making.—From folded and delineated figures; solids made from stiff paper or cardboard.

Sewing.—Putting in gussets, sewing on buttons, making buttonholes, &c.

Sample work to be preserved by the teacher.

EIGHTH GRADE.

Modeling.—Forms and relief designs.

Drawing.—From objects. Designs. Elementary drawing with straight-edge and dividers. Working-drawings from free-hand sketches; animal and vegetable forms. Shading.

Color.—Shades and contrasts. Laying on colors. Colored crayons, &c. Making colored charts to illustrate the prismatic colors.

Construction.—With cardboard or wood.

Sewing.—Cutting and making of aprons, &c., and ornamental stitches.

CAMDEN MANUAL TRAINING AND HIGH SCHOOL,
123-125 Federal Street.

Opened February 5th, 1891. Re-organized February 4th, 1894.

GENERAL SUBJECTS,	{ Drawing, Modeling, Color,	{ Free-hand.
		{ Or thographic Projection. Isometric Projection. Geometric and Industrial Designs. Descriptive Geometry. Working-Drawing.

FIRST YEAR.

FORM STUDY,	{ Modeling, Drawing.	{ Clay.
		{ Sand. Putty.
COLOR,	{ Construction,	{ In paper.
		{ Wood. Iron.
DRAWING,	{ The theory of color. Shades and contrasts. Laying on colors, making color charts, &c.	{ Free-hand from objects. Free-hand sketches for working-drawings. Working-drawings (to scale, with instruments). Projections, &c. Lettering, &c. Geometric designs.
		{ The use and care of carpenters' tools. From drawings, to construct in wood the several kinds of joints, the cube, cylinder, &c. Wood-carving, relief forms, &c.
WOOD-WORK,	{ The use of the chisel, file, scraper. Chipping, filing, scraping. Shaping iron castings into the several type forms.	
IRON-WORK,		

SECOND AND THIRD YEARS.

FORM STUDY,	{ Modeling, Construction, Drawing,	{ In wood.
		{ Iron. Tin.
WOOD-WORK,	{ Color,	{ Theory and practice. Coloring drawings. Conventional colors for wood and metal.
		{ Pattern-making, turning, carving, worked out from drawings.
IRON-WORK,	{ Forming: Drawing out, welding, &c., from drawings. Soldering (plain seam), (lock seam), &c. Pipe joints; Corners. Completed conical, cubical and cylindrical forms, &c., from drawings.	
TIN-WORK,	{ Free-hand from the object (shading). Objects, singly and in groups. Free-hand designing. The elements of perspective, mechanical draughting, &c. Shop tools and Machine details—such as bolts, nuts, screws, threads, pipe, valves, parts of steam engine, boiler, &c.; development of surfaces applied to sheet-metal work. Geometric and industrial designs, &c. Descriptive geometry.	
DRAWING,		

Sewing through the three years.

EQUIPMENT.

1. *Drawing-Room.*

Twenty-six adjustable drawing-desks, 50 redwood drawing-boards, 85 white pine drawing-boards, 75 T-squares, 75 sets triangles, 30°, 45°, 60°, &c.; 66 irregular curves, 200 paper scales, thumb tacks, 3 combination racks for drawing-boards, wall boards, large wooden dividers, triangles, &c., books of reference, drawing-paper, 24 x 19 and 22 x 17; artist's drawing blocks, Higgins' different colored inks, lead pencils, camel-hair brushes, sable brushes, engineer's paper, colored crayons, china board, cardboard, tissue paper, manilla paper in three weights (for patterns, constructions, &c.); designing pens; "Bradley's Color Scheme;" artist's leads, charcoal sticks, black crayons, clay, plaster of paris, casts, models, plaques, &c.; terracotta vase forms, tracing cloth, &c.; sweet oil.

2. *Wood-working Room.*

Ten double benches, 2 single benches, 24 sets of tools, fore-plane, jack-plane, smoothing-plane, block-plane, firmer chisels—1 $\frac{1}{4}$ "', 1"', $\frac{3}{4}$ "', &c., mortising chisels, $\frac{5}{16}$ "', try-squares, bevels, marking gauges, claw-hammer, 12" back saws, special 12" rules, screw-drivers, oil-stones, oil-cans, lead pencils, bench hooks, dust brushes, Cook's dividers.

General tools: 4 cross-cut saws, 4 rip saws, 2 hatchets, 2 dozen eccentric clamps, 2 dozen cabinetmaker's wood clamps, 1 glue pot, 2 shellac pots, 1 grindstone, 1 turning device, 1 large steel square, 2 wood rasps, 1 bastard file ($\frac{1}{2}$ round), 1 ratchet brace, 1 set of bits, $\frac{1}{4}$ "'-2"', 1 bit, $\frac{3}{16}$ "', 1 extension bit, 1 countersink, 2 screw-drivers, 1 pair pliers, 1 oak chopping block, 1 Morell's saw set, 1 8" monkey-wrench, 1 gas furnace and tubing, for heating glue, steel letters and numbers for marking work, 2 carpenter's horses, 1 combination awl, 1 dozen brad awls (assorted sizes), 2 dozen saw files (assorted sizes), 4 slip stones, 2 screw chucks for lathe, one $\frac{1}{8}$ "' mortise chisel, 1 pair carpenter's pincers, 16 full sets carving tools, 2 full sets wood-turning tools, 3 sets patternmaker's gouges, 2 pairs wood-turning calipers, 6 turning chisels, 14 patternmaker's dogs, 3 $\frac{1}{8}$ "' paring chisels, 1 nail puller, 2 Crown lathes, belting, &c., 1 five-horse-power C. & C. electric motor, 1 speed calculator, 1 Victor scroll saw, scroll-saw blades, 1 belt punch, 1 dozen oilers, 1 combination iron planer, 1 iron miter-box, 8 center bits (assorted), 1 bit gauge, 1 set (3) iron planes, 1 convex and concave iron planes, platforms for small boys, fret-saw files, 1 small plumb and level, wooden mallets, 6 paring chisels, $\frac{1}{4}$ "'-1 $\frac{1}{2}$ "', sets of pigeon-holes for keeping finished work, slip stones, knife blades, triangular stones, Arkansas stones, &c., &c.,

glue, shellac, alcohol, chalk, cord, sperm oil, lard oil, nails, screws, brads, &c., glue-brushes, shellac-brushes, pattern pine, 1'' and 1½'', poplar, 2'' x 2'', 3'' x 3'', 4'' x 4'', and ½''; rosewood and ebony, 2'' x 2'', and ⅛''; maple, 4'' x 4''; birch, 4'' x 4''; maple, ⅛''; walnut, ⅛''; hickory, 2'' x 2''; oak, 2'' x 2'', and ½''; brass wire, jack-chain, sand-paper, emery-paper, French walnut veneering, linseed oil, pumice-stone, rotten-stone, copper wire, yellow wax, cherry wood, ⅞'', 2'' x 2'', and ⅛'', &c.

3. *Metal-working Room.*

Iron and Lead.—Three 16 ft. double benches (24 pupils), 24 Parker's parallel screw vises, 24 brass clamps, 24 sets of tools, 2 cap chisels, 2 flat chisels, 1 12'' steel straight-edge, 1 6'' steel scale, 1 4'' graduated try-square, 1 steel scriber, 1 steel scraper, 1 pair 5'' spring calipers, 1 pair combination dividers, 1 12'' flat bastard file, 1 8'' hand bastard file, 1 dust-brush, 1 tool-rack, 1 wood spring clamp, 1 center-punch, 1 bolt-pein hammer.

General tools: Six surface plates, 6 scribe gauges, 6 steel protractors, 6 oil-cans, 2 Buffalo forges, 2 anvils (100 lbs. each), 2 large oak anvil-blocks, 2 pairs tongs, 15 platforms (for small boys), 2 sets hammers, 2 hardies, 1 grindstone and truing device, 1 waste-can, 1 8'' monkey-wrench, 4 towel-racks, cape and flat chisels, file-handles, hammer-handles, steel letters and figures, 1 pair 4'' German machine calipers, 12 10'' smooth-files, 1 16'' drill-press, 11 drills, ⅙''-⅝'', 1 Acme drill chuck, 1 drill socket No. 2, 1 2-lb. blacksmith hammer, 1 10-lb. sledge hammer, 1 square-edge set-hammer, 2 pairs blacksmith's calipers, 1 pair hollow tongs, 1 pair closed tongs, 2 punches ¾'' and ½'', 2 blacksmith's squares, 1 top and bottom fuller, ⅜''; 1 set taps and dies, ⅞''-¼''; 1 set taps and dies, ¼''-⅜''; white waste, castings, vaseline, square iron, ⅝'' x ¼''; round iron, ⅝''; flat iron, 1'' x ⅛''; round iron, ⅜'', and ¼''; square iron, ¼''; band iron, ⅝'' x ⅛''; Norway iron, ⅞'' square; tank rivets, ⅜''; bituminous coal, red chalk, sperm oil, &c., pig lead in 1-lb. bars.

Tin.—1 18-ft. single bench (6 pupils), 2 double iron furnaces, 1 dozen tinner's mallets, 4 hand grooving tools, 3 riveting hammers, 3 setting hammers, 4 pairs flat-nosed pliers, 8 soldering irons, 4 pairs plain dividers, 6 scratch awls, 2 rivet sets and headers, 2 pairs tinner's shears, 1 raising hammer, 2 beakhorn stakes, 1 creasing stake, 1 square coppersmith's stake, 1 creasing swedge, 1 square-faced swedge, 2 bench plates, 3 stakes, 1, 2, 3 (bottom stakes), 1 hatchet blade, 1 hollow mandrel, 1 wire gauge, 6 maple-wood 12'' special rules, 1 set solid punches and chisels, 1 double stake (straight), 4 heads, 1 3'' round head stake, 1 washer cutter, 1 pair crooked-nose shears, &c.; muriatic acid, zinc chippings, solder in bars, tin.

4. *Sewing.*

Aluminum thimbles, tape measures, needles, darning needles, darning eggs, steel scissors (assorted sizes), folding tables, closets for storing work and showing finished products, white muslin, unbleached muslin, gingham, butcher cloth, paper pattern designs, tape, sewing cotton (white and colored), embroidery cotton (white and colored), shoe buttons, four-eyed porcelain buttons, hooks and eyes, pins, beeswax, pricker, sewing cards, straight-line and pictorial designs.

5. *Modeling and Color-Work.*

Manilla paper, cardboard, tracing-paper, straight-edges, scissors, clay-moulding sticks, colored sticks, Bradley's colored papers, mucilage, colored crayons, "Bradley's Color Scheme" folding tables, clay trays, closets for material and for showing completed products (products changed at the close of each year), plaster of paris, clay, casts and models, &c.

5. *Number of lessons per week given each class.*—One.
6. *Length of lesson.*—Sixty minutes.
7. *Grade or grades in which subject is taught.*—Third to eleventh.
8. *Amount expended during current year.*—Plant, \$132.68; material, \$104.71; salary,
9. *Total amount expended to date.*—\$1,136.68.

Respectfully submitted,

HORATIO DRAPER,
Supervisor.

CARLSTADT.

A. B. Poland, State Superintendent :

SIR—I herewith present my report on manual training for the public school of Carlstadt, District No. 37.

The plan of last year's work has not been changed—the work has only been extended by adding joinery and wood-carving for boys, and cutting and fitting for girls.

In the *kindergarten* the usual work has been done, such as sewing, weaving, perforating, paper-folding, drawing, stick-laying, tablets, object lessons on material.

In the *primary grades* the kindergarten work has been continued, using more difficult designs.

In addition to this, clay-carving has been done. The children were taught, first, to carve simple geometrical forms in clay in the following order: Rectangle, square, triangle, circle, polygon and their applications.

In the *intermediate grades* the cardboard work was begun, *i. e.* cutting out the different geometrical forms from cardboard. First surfaces were drawn and cut out, and then solids and their practical application.

In the highest grade of the school for the first time joinery and wood-work have been taught systematically.

In joinery there have been the past year two classes of twelve each.

The articles to be made by these classes are first required to be made in orthographic projection as a working-drawing by each member of the class, the drawing to be approved by the instructor before the tools are applied to their construction.

Instruction was also given in the value and adaptation of different kinds of woods for various uses.

The exercises in the course include the following :

1. Exercises to test and apply the skill of the learner in the use of the cross-cut saw.
2. A half-and-half open lap-joint.
3. An open mortise and extension joint.
4. An open double mortise and tenon joint.
5. A closed single mortise and tenon joint.
6. A closed double mortise and tenon joint.
7. A miter-joint with an open double mortise and tenon.
8. A half-dovetail joint, halved together.
9. A dovetail-joint with single tenon.
10. An oblique mortise and turn joint, with a pin.
11. A dovetail-joint with several tongues.
12. A number of physical apparatus.

Wood-carving was begun in April, with six of the more advanced pupils. The course followed has been laid out by the principal. The work has been done on whitewood, each piece representing a drawing carefully done in free-hand drawing.

In sewing, the course followed is that of the college for the training of teachers in New York City. Sewing is taught throughout the school. The work has been extended by teaching cutting and fitting in the grammar grades.

Drawing goes hand-in-hand with manual training instruction. The interest aroused in previous years has not grown less where manual training is no longer a new thing. This is true of pupils, teachers and the community in general. Our pupils show so much interest in the work that many of them do work outside of school hours.

Total	\$1,454 87

DRAWING.

1. *Name of teacher.*—M. Banberger, Elizabeth L. Compton.
2. *Special salary paid.*—\$200.
3. *Is teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Male, 151; female, 111.
5. *Number of lessons per week given each class.*—Two.
6. *Length of lesson.*—Forty-five minutes.
7. *Grade or grades in which subject is taught.*—All grades.
8. *Amount expended during current year.*—Plant, \$.....; material, \$2.84; salary, \$200.
9. *Total amount expended to date.*—\$880.83.

MODELING.

1. *Name of teacher.*—Elizabeth L. Compton.
2. *Special salary paid.*—\$200.
3. *Is teacher engaged exclusively in this work?*—No.

4. *Number of pupils taught.*—Male, 128; female, 88.
5. *Number of lessons per week given each class.*—Two.
6. *Length of lesson.*—Forty-five minutes.
7. *Grade or grades in which subject is taught.*—Primary and intermediate.
8. *Amount expended during current year.*—Plant, \$1.45; material, \$49.82; salary, \$200.
9. *Total amount expended to date.*—\$767.38.

WOOD-WORKING.

1. *Name of teacher.*—Elizabeth L. Compton, M. Bamberger and assistants.
2. *Special salary paid.*—\$450.
3. *Is teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Male, 46; female,
5. *Number of lessons per week given each class.*—Two.
6. *Length of lesson.*—Forty-five minutes.
7. *Grade or grades in which subject is taught.*—Grammar.
8. *Amount expended during current year.*—Plant, \$7.35; material, \$25.14; salary, \$450.
9. *Total amount expended to date.*—\$788.95.

SEWING.

1. *Name of teacher.*—Abby L. Roberts, Elizabeth L. Compton.
2. *Special salary paid.*—\$150.
3. *Is teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Male, ; female, 79.
5. *Number of lessons per week given each class.*—Two.
6. *Length of lesson.*—Forty-five minutes.
7. *Grade or grades in which subject is taught.*—Primary, grammar and intermediate.
8. *Amount expended during current year.*—Plant, ; material, \$18.12; salary, \$150.
9. *Total amount expended to date.*—\$622 71.

Respectfully submitted,

HERMAN FOTH,
District Clerk.

EAST ORANGE.

To Addison B. Poland, State Superintendent :

SIR—I herewith submit a report of manual training for East Orange for the year 1893-'94.

JOINERY AND CARVING.

Plant and Material.—The wood-working room, which is 28 x 38 feet, contains thirteen double benches, accommodating twenty-six pupils, and has lockers for the individual pupils. Each bench is supplied with the following list of tools: Back-saw, jack-plane, smooth-plane, block-plane, hammer, mallet, firmer chisels, $\frac{7}{8}$ " and $\frac{1}{4}$ "; bits, $\frac{5}{16}$ " and $\frac{1}{2}$ "; brace, bevel, brush, try-square, gauge, rule, dividers, knife, screw-driver, oil-stone, oiler, bench-hook and cutting-board.

The following tools are provided for general use: One cross-cut saw, 1 rip saw, 1 rabbet-plane, 1 spoke-shave, 1 wrench, 1 set bits, $\frac{1}{8}$ " to $\frac{7}{8}$ "; 1 countersink, 1 screw-driver bit, 1 miter box, 1 grindstone, 2 files, 2 rasps, 1 file-brush, 1 square, 1 dozen hand screws, 2 cabinetmaker's clamps, 2 dozen cabinet clamps, glue, sandpaper, 3 firmer chisels, $\frac{1}{2}$ ", $\frac{3}{4}$ ", 1"; 1 nail set, 1 tack claw, 3 brad awls, 3 scratch awls, 1 expansion bit, 1 dozen drills, 2 screw-drivers, 1 bracket saw, 1 scroll saw and lathe, 3 dozen carving knives, 1 dozen pencil compasses, 20 sets carving tools, 1 slips, carver's markers, an assortment of screws, brads, nails washers and hinges, 1 combined plyers and nippers, 1 pair scissors, 700 blue prints, $1\frac{1}{2}$ dozen special carving tools, 4 carpenter's horses, 2 pairs calipers, an assortment of woods.

DRAWING AND SEWING.

There are two drawing-rooms, one 25 x 45 feet, supplied with thirty adjustable tables and the necessary drawing-boards, casts and models; the other, 25 x 28 feet, contains twenty adjustable draughting stands, each supplied with a case of drawing instruments. These stands also serve as sewing tables. In addition, there are inks of different colors, pencils, erasers, 4 dozen T-squares, 1 dozen set squares, 4 dozen sets of triangles, blackboard compasses, 50 drawing-boards, drawing-board racks, print frame, bath tray, scales, 15 rubber curves, 2 steel erasers, camel-hair brushes, tack lifters, Universal drawing-paper, tracing-paper, blue-print paper, thumb tacks, models, books of reference, ink slab, mixing cups, scissors, thimbles, cases needles, pins, thread, sewing and embroidery silks and yarns of different colors, an assortment of cotton, linen and woolen cloths, edgings, laces, tapes, buttons, ribbon, darning cottons, tape measures, emeries, measures, colored papers.

CHARACTER AND AMOUNT OF WORK.

(a) *Joinery*.—Preliminary exercises in the use of the various tools, groove, ledge, dado-joints, nail box, clock shelf, cross lap, end lap, middle lap and dovetail lap-joints, frame, plain joint, bench hook, drawing-board, through mortise and tenon, frame, blind mortise mortise and tenon, relished end mortised, slip mortise and tenon, keyed dovetail mortise, door joint, panel door, brace joint, frame, leg and rails, stool, box, miter joint, mitre box, picture frame, miter lap-joint, single dovetail, half-blind dovetail, through-end dovetail, box dovetailing.

Some of the above exercises are supplementary and are designed to furnish employment for rapid workers, and to give those who need it additional work along the lines in which the required model shows weakness.

The average student makes about two dozen exercises during the year.

(b) *Carving*.—Incised carving, preliminary exercises for relief carving, flat relief and modeled relief applied to writing tablets, frames, foot-stools, boxes, stands, chairs, study of different styles of ornament, enough practice in the use of carpenter's tools to complete the objects, care of tools, stones, slips, practice in finishing with oil, stain and shellac.

The average student finishes about six pieces during the year.

(c) *Constructive Drawing*.—Geometrical problems, lettering, projections of geometrical solids singly and in groups, projections of solids resolved in different ways with sections and developments, patterns for tinsmithing, working-drawings of shop work, also tools, machine details, small machines, blue prints.

The average student completes about eight plates a year.

(d) *Sewing*.—Darning on canvas, running, hemming, chain-stitch felling, French seam, overhanding turned edges, overhanding on bias, overhanding selvages, sewing on of lace, nappery stitch, gusset, flap and fly—three models, sewing on tape, hem with edging, gathering, petticoat with tucks, patching on gingham, flannel, damask and cloth; herring-boning, flat buttonhole stitch, darning—three models, bias ruffle, whipped hem apron, slip-stitching, buttonholes, sewing on buttons, eyelets, loops, pillow shams, feather-stitching, hemstitching, drawn work, satin stitch, fringing, flannel embroidery.

Some of the above models are supplementary pieces for rapid workers.

The average student completes about ten models a year.

Manual training is considered as compulsory in the grammar grades but is optional in the high school.

8. *Amount expended during current year.*—Plant, \$3.75; material, \$101.52; salary,
9. *Total amount expended to date.*—\$105.27.

Respectfully submitted,

VERNON L. DAVEY,
Superintendent.

GARFIELD.

To Addison B. Poland, State Superintendent :

SIR—I inclose herewith manual training report of School District No. 42, county of Bergen, for school year ending June 30th, 1894.

The report is as accurate as possible under the circumstances. The school year has been one of marked prosperity in the department of manual training. The work is pursued with interest, and we believe with profit, all along the line. While no new kinds of work in this department have been introduced, yet no kind that has been already tested would willingly be dropped.

(a) PLANT AND MATERIAL.

Plant.—Consists of two rooms in the regular school building, with equipment and benches for twelve pupils. Twelve sets of tools, each set consisting of the following tools: Back-saw, two bits, try-square, gauge, plane, knife, carpenter's rule, two chisels and dividers. In addition to the foregoing several tools are provided for general use.

Material.—White pine, whitewood, glue and shellac.

The drawing-room has fifteen of Keuffell & Esser's drawing tables, each being supplied with a drawing-board, T-square, triangles, compasses and ruling-pen.

(b) CHARACTER AND AMOUNT OF WORK DONE.

Drawing.—The work in drawing and modeling in the primary grades is practically the same as that outlined in the course of the State Normal School.

All teachers in the primary grades of the Garfield school were graduated from the State Normal School and the work being done by these teachers is eminently satisfactory.

Drawing in Grammar Department—Fifth Year.—Construction (free-hand), making from patterns: Square box, circular box, equi-tri-prism, toy house.

Working-drawings: Square box, circular box, equi-tri-prism in three positions, ellipsoid, ovoid, toy house, objects based on equi-tri-prism.

Representation (outline drawings): Cylinder, tumblers, boxes—square and circular, rectangular objects in front of and below the level of the eye, fruit—singly and in groups, group of familiar objects—cylindrical, conical and rectangular.

Decoration in drawing and tertiary colors: Rosette from copy, modi-

fication from units applied to original design, historical ornament, Moorish designs, conventionalizing leaves and flowers.

Sixth Year.—Construction (free-hand): Patterns, cone, tumblers, book, square pyramid, square plinth, objects based on square plinths.

Working-drawings: Cone, tumbler, book, square pyramid facing cube and square pyramid turned at 45 degrees, sphere on square prism facing square plinth, cylinder in front of square prism, objects with three unequal dimensions.

Representation (outline and shading): Cone, cup, tumbler, flower-pot, open book, sphere on square prism facing cup on book, group of familiar objects, cylinder in front of square prism, rectangular objects turned at 45 degrees, group showing cylinder, cube facing square prism turned, plant life.

Decoration for drawing and tertiary colors, historical ornament, fleur-de-lis, ivy leaf, wave scroll, flower forms, original designs.

Seventh Year.—Construction: Basin, lamp shade, hexagonal prism, patterns (instrumental).

Working-drawings (free-hand and instrumental): Basin, lamp shade, hollow cylinder, vase forms, hexagonal prism, joints, wedge-shaped block, familiar objects, true square, pencil and saw exercise, square, gauge, bit and saw exercise, square and gauge exercise, bit exercise, saw exercise.

Geometric problems (instrumental): To draw lines parallel, to bisect a line, to draw an equi-triangle, to draw a regular hexagon, to erect a perpendicular at the end of a line, to draw a square on a given base, to draw an oblong, two sides given.

Representation (outline and shading): Bowl, books, steps, vase and jar forms, groups of type forms, objects based on type forms, plant life.

Decoration (drawing and colors): Historical ornament, Egyptian, Greek, Gothic; conventionalizing from plant life, original design.

Working-drawing (instrumental): Saw and chisel exercise, plane exercise, cutting-board, bottle stand, sand paper block, sedge-joint dado-joint.

Eighth Year.—Construction. Patterns (instrumental): Pocketbook, original design for familiar object.

Working-drawings (free-hand and instrumental): Bracket, pulley, machine detail, cube at angles of 60 degrees and 30 degrees, original design for piece of furniture, tooth-brush holder, nail box, clock shelf, cross lap-joint, middle lap-joint.

Representation (outline and shading): Rectangular objects, both above and below the eye; cylindrical and conical objects, showing relation of axis to diameter of ellipses; artistic grouping and rendering from nature, from memory, from copy.

Decoration (drawing and colors): Historical ornament, original design.

Ninth Year.—Advanced geometrical problems, geometrical problems

applied to historical ornament and mechanical drawing; enlargement and coloring of historical ornament; test-working, free-hand, representation working-drawing (instrumental), end lap-joint, dovetail-joint, picture frame, bench hook, straight-edge, drawing-board.

Remark: All working-drawings are worked out in wood.

J. C. VOORHIS,
President of Board of Education.

MONTCLAIR.

To Addison B. Poland, State Superintendent:

SIR—The condition of manual training in the town of Montclair has been almost identical with that existing in the year 1892–93. The work has commanded the interest and approval of all concerned, and its benefit to the pupils is increasingly evident. This benefit consists in a knowledge of those mechanical principles that find constant application in every-day life, and in the ability to embody in concrete forms the conceptions of the mind. The ready use of the hand and the eye secures confidence and clearness of thought. The work of the year has differed with that of the preceding year rather in quantity, owing to increase in the number of pupils, than in kind or quality.

WOOD-WORKING.

(a) *Joinery.*

1. *Plant.*—

Fourteen large double benches, made of maple.

Twenty-eight sets of joiner's tools.

Fifty lockers.

Large cabinet, with glass front and sides.

2. *Material.*—

Pine and whitewood lumber.

Small amount of hard wood.

3. *Character of work.*—

Certain preliminary exercises are given in the use of the rip-saw, cross-cut saw, back-saw and chisel. A study is made of tools, as to name, use, &c. A course of exercises, consisting of ten different joints, is pursued by each pupil. Each boy makes one or more of the following articles: Bench-hook, miter-box, saw-horse, hardwood bracket, or other useful articles. Pupils are also taught gluing and polishing.

4. *Amount of work.*—

Each pupil makes the ten joints referred to above, and one or more of the useful articles mentioned, according to ability.

(b) Wood-carving.

1. Plant.—

The same fourteen double benches used in joinery.
Thirty-five sets of carving tools.
Cabinet referred to under joinery.

2. Material.—

Pine, whitewood, oak, cherry, black walnut, mahogany, hazel,
maple, holly.
Varnish, oil, shellac, stain, waxed finish.

3. Character of work.—

Preliminary lessons on the names and uses of the tools.
Exercises in pine cuts, diaper-carving and incised carving.
Exercises in polishing and finishing.
The articles made consist of blotters, ink-stands, folios, paper
racks, picture frames, book-slides, boxes, chairs, bellows, &c.

4. Amount of work.—

Each pupil carves three pieces in pine, as preliminary work,
and three or four pieces of the articles mentioned above,
in hard wood.

(c) Wood-turning.

1. Plant.—

Five wood-lathes, run by steam-power, with a set of turning
tools with each lathe.

2. Material.—

Both soft and hard lumber.

3. Character of work.—

Eight or ten pieces are turned and finished from drawings, the
exercises being so arranged as to combine the greatest
number of different uses of the tools.

4. Amount of work.—

Each pupil executed, during the year, about ten pieces.

METAL-WORKING.

1. Plant.—

One steam engine of about ten horse-power, with boiler.
Two large and two smaller lathes for metal-turning, with suitable
tools for each.
Ten vises for chipping and filing, with suitable tools for each.
One steam drill, with suitable tools.

2. Material.—

Rough cast-iron bars in tubes.
Bars of wrought iron and of brass.

3. Character of work.—

From rough castings mandrils are turned to size and polished.
The mandrils are fitted into rough iron collars, which are them-
selves turned and polished.
Rough iron blocks are chipped and filed into cubical form and pol-
ished.
Brass templates of 240° are made, and with these brass and iron
cylinders are chipped and filed into hexagons.
Practice in drilling through the curved surface of a cast-iron
cylinder.

CLAY-MODELING.

1. Plant.—

- Two double tables, 16 x 6.
- Sets of wooden knife tools and compasses.
- Two calipers.
- One large pair of dividers.
- Fifty plaster casts.
- Three dozen high stools.
- Six dozen modeling-boards.
- Two clay bins, zinc lined.
- Three crocks, for mixing clay.
- Three dozen towels.
- Two dozen sponges.
- Wash basins and pails.
- Twelve yards enameled cloth.
- Six yards canton flannel.

2. Material.—

- Twelve hundred pounds clay.

3. Character of work.—

A portion of clay is taken and built up by successive additions into a compact mass whose form approximates that of the object to be modeled. Then parts are cut away until the finished form remains. The modeling is largely from casts ; sometimes from natural objects.

4. Amount of work.—

Each pupil models, on the average, seven pieces during the year.

COOKING.

1. Plant.—

- Two counters, provided with drawers, cupboards and moulding-boards.
- One large gas range.
- Seven gas stoves.
- Two tables.
- One large dining table.
- A dozen and a half dining sets ; plates, knives, forks, &c.
- Variety of pans, bowls, dishes and other utensils for cooking.
- One patent bread raiser.
- Two dozen chairs.
- One dozen and a half lockers.
- One sink, with plumbing.

2. Material.—

Various cereals, meats, vegetables, fruits, eggs, sugar, &c. ; also coffee, tea, chocolate and cocoa.

3. Character of work.—

The work may be classified as follows :

- Cooking of vegetables.
- Canning of fruits.
- Soup stock.
- Bread.
- Meats and poultry.
- Entrees.
- Cakes.
- Desserts.
- Fish.
- Salads.
- Cereals.
- Eggs.
- Miscellaneous.

4. Amount of work.—

Each pupil has to take a part in the preparation of dishes under all the divisions of the above classifications. The girls are obliged to take turns, some taking notes while others are engaged in cooking.

SEWING.

1. Plant.—

Sets of scissors, thimbles, needles, for each class in the seventh grade.

2. Material.—

Cotton goods for drill exercises and various cloths for different garments. Thread, sewing silk and yarn.

3. Character of work.—

Special attention has been given to overhanding, running, stitching, hemming, overcasting and binding. These stitches have been applied to the making of various articles of clothing.

4. Amount of work.

Each pupil has been trained in the exercises above mentioned, and during the latter part of the year has made some articles of clothing.

DRAWING.

1. Plant.—

Twenty plaster casts.
Twenty-five wooden models.
Two tables.

2. Material.—

Four reams 30 x 40 manilla paper.
One ream 18 x 24 charcoal paper.
Nine gross pencils.
One ream drawing-paper.
Six gross erasers.
Six gross rulers.
Twelve boxes charcoal.
Two pints drawing ink.
Three dozen boxes colors.

3. Character of work.—

The work consists of model-drawing, designing from both natural and conventional forms, working-drawings, geometrical forms, shading and charcoal work, laying of colors.

4. Amount of work.—

In third, fourth and fifth grades pupils have drawn four tablets, eight natural objects, four leaf forms, six simple designs, either in borders or around the center, five patterns for folding and pasting. Designs have been colored in the fifth and two following grades.

In the sixth grade pupils have made five working-drawings, six designs, eight drawings from geometrical solids, leaf forms.

In the seventh grade the pupils have made free-hand outline drawings from nine geometrical solids. Also drawings from leaf forms and twelve working-drawings for shop work.

In the eighth grade the pupils have made and shaded ten drawings of geometrical solids and objects based on them. Also flower and leaf forms have been drawn and shaded and six designs made.

In the ninth grade pupils have drawn and shaded with pencil eight groups of solid forms and have executed seven charcoal studies.

In the first year of the high school course pupils have done advanced work in charcoal from casts.

9. *Total amount expended to date.*—

Respectfully submitted,

RANDALL SPAULDING,
Superintendent.

ORANGE.

To Addison B. Poland, State Superintendent:

SIR—I present herewith a report of the work in manual training in the public schools of this city for the year 1893-4:

The work is compulsory, and every pupil in the schools, except a few in the advanced high school grade who had completed the manual training course, has received instruction. The interest is well sustained, and the progress in general has been excellent.

(a) DRAWING.

Drawing is taught in all grades of the schools. In the first two years the instruction is based on the twelve type forms, as presented in "Prang's Use of Models." Beginning with the third year, books are employed, and continued till the seventh year. Two books are used in each year. An equal amount of time is given to the three divisions, construction, representation and decoration. In the fifth year mechanical drawing is begun, and working-drawings are made of the various subjects of lessons afterward given in the wood-working room. In these drawing lessons, the seventh, eighth and ninth-year grades use ink. All the free-hand drawing is from objects, and the decorative work is based on historic ornament.

A carefully-graded course in designing with colored paper is used in connection with the drawing during the first five years. The primary colors, with three tints, are used in the first year, all the prismatic colors with their tints and shades in the second and third years, six intermediate colors in five tones in the fourth year, and the tertiaries or greys in five tones in the fifth year.

Geometric forms, with straight and curved lines, are the basis of the color-work of the first three years, while that of the instruction of the fourth and fifth years is the conventionalized leaf or flower forms and historic ornament.

The plant and material consist of drawing-boards and tables, sets of tools for mechanical drawing, geometric forms in wood, casts, color charts, pencil sharpeners, books of reference, pencils, paper, erasers and drawing-books in stock.

(b) MODELING.

This has been done in primary grades, under the instruction of the class teachers, and the supervision of the special instructors. The plant and material comprise modeling boards, clay tools, enameled cloth covers, crocks for holding clay, cabinets and clay in stock.

The formation of geometric solids, the modeling of twelve type forms and objects based on them, and of tiles with geometric and natural forms, indicate the character of the work.

(c) SEWING.

The plant and material under this head include scissors, thimbles, needles and cloth in stock, with cabinets and closets.

Instruction has been given in the fifth, sixth, seventh and ninth

years. The course is thorough, including all varieties of plain sewing and a few embroidery stitches. Models of four garments are made as tests of the pupils' proficiency.

(d) COOKING.

The plant includes two gas ranges, with twelve small stoves connecting, cooking utensils, dishes, moulding-table, ice chest, closets, cupboards, tables and drawers, diagrams and charts, bottled results of the analyses of different foods, clock, settees and chairs, in a room specially arranged for the purpose.

Lessons are given once a week in the tenth and eleventh years. Each year's course consists of thirty-two lessons, including about eighty dishes. The lessons are one and a half hours long.

The chemistry of cooking, the care of cooking utensils, the hygienic and economic values of food products, domestic economy, cooking for the home table and for invalids, are the subjects of the lessons.

(e) WOOD-WORKING.

The boys of the sixth year have been taught knife-work, preparatory to the use of tools in more advanced lessons. In the eighth year, wood-carving has been taught to both boys and girls. In the seventh, ninth, tenth and eleventh years, the lessons have embraced the care and use of tools, measurements, sawing, chiseling planing, mitering, the making of joints of various kinds, the construction of models of sash and doors, and of book racks, stools, tables and cabinets, as in previous years. Some of the boys in the advanced high school classes, who have completed the required course, have voluntarily continued the use of the tools, and have made some very creditable desks, mineral cabinets and book-cases.

DRAWING.

1. *Name of teacher.*—Elizabeth A. Mellick.
2. *Special salary paid.*—\$534.
3. *Is teacher engaged exclusively in this work?*—Mostly.
4. *Number of pupils taught.*—Males, 1,179; females, 1,169.
5. *Number of lessons per week given each class.*—One.
6. *Length of lesson.*—Thirty-five to sixty minutes.
7. *Grade or grades in which subject is taught.*—All grades.
8. *Amount expended during current year.*—Plant, \$168.10; material, \$380.91; salary, \$534.
9. *Total amount expended to date.*—

MODELING.

1. *Name of teacher.*—Regular teachers.
2. *Special salary paid.*—None.
3. *Is the teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Males, 602; females, 605.
5. *Number of lessons per week given each class.*—One.
6. *Length of lesson.*—Twenty to forty minutes.
7. *Grade or grades in which subject is taught.*—First to fourth years.
8. *Amount expended during current year.*—Plant,; material, \$3; salary,
9. *Total amount expended to date.*—

WOOD-WORKING.

1. *Name of teacher.*—Frank E. Hall.
2. *Special salary paid.*—\$800.
3. *Is the teacher engaged exclusively in this work?*—Yes.
4. *Number of pupils taught.*—Males, 136; females, 36.
5. *Number of lessons per week given each class.*—Two.
6. *Length of lesson.*—Forty-five minutes.
7. *Grade or grades in which subject is taught.*—Seventh to twelfth.
8. *Amount expended during current year.*—Plant, \$123.17; material, \$162.34; salary, \$800.
9. *Total amount expended to date.*—

COOKING.

1. *Name of teacher.*—Mary E. Habberton.
2. *Special salary paid.*—\$200.
3. *Is the teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Male,; female, 29.
5. *Number of lessons per week given each class.*—One.
6. *Length of lesson.*—One and one-half hours.
7. *Grade or grades in which subject is taught.*—Tenth and eleventh.
8. *Amount expended during current year.*—Plant,; material, \$39; salary, \$200.
9. *Total amount expended to date.*—

SEWING.

1. *Name of teacher.*—Mary E. Habberton.
2. *Special salary paid.*—\$800.
3. *Is teacher engaged exclusively in this work?*—No.
4. *Number of pupils taught.*—Males,; females, 300.
5. *Number of lessons per week given each class.*—One.
6. *Length of lesson.*—Forty-five minutes.
7. *Grade or grades in which subject is taught.*—Fifth, sixth, seventh and ninth years.
8. *Amount expended during current year.*—Plant, \$12.32; material, \$44.99; salary, \$800.
9. *Total amount expended to date.*—

Respectfully submitted,

U. W. CUTTS,
Superintendent.

PASSAIC.

To Addison B. Poland, State Superintendent:

SIR—Herewith please find manual training report for 1893-94.

At your request, I have carefully prepared the following written report:

1. Our building, situated near the high school, has been adapted from a four-room school building, in use until June last. Our new No. 4 school building, finished last August, threw this building into our hands for manual training purposes, at the very time we had sufficient funds to be able to use it.

No one objected. Plans were submitted for its transformation; bids were received for the work, and jobs let. By the 30th of June, few, on entering the building, would recognize it as the old primary school. The two rooms on the first floor were converted into one, for a joinery and carving-room. The floors above and below were overlaid with marble flooring. The windows on the first floor were protected with heavy wire screens, on hinges, and with safe locks, to protect from petty thieves. Storage-room for lumber was fitted up, a dressing-room for convenience of teachers was provided; lavatories were put in in joinery, cook and drawing-rooms. Water and gas were brought into the building, and substantial plumbing done.

Cases for tools and the work of the pupils were put in the joinery-room; also, cases for the drawing-boards, and the pupils' work in the mechanical drawing-room, and a suitable table and fixtures in the school kitchen, and the building was painted inside and out.

2. The joinery-room was furnished with ten double Larsson benches, with vises at side and ends, and one No. 5 Larsson improved bench for teacher's use.

The mechanical drawing-room, with twenty adjustable drawing stands, oak top, 25'' x 26'', folding-arm, plain-shelf—Kidder's patent, Worcester, Mass.

3. The other furniture, tools and implements throughout are as follows:

FOR JOINERY.

Twenty each of the following: Back-saw, 10'', Disston's No. 4; jack plane, No. 26, Bailey's patent; smoothing plane, No. 4, Bailey's patent; hammer, Maydole's No. 12; mallet, No. 3, Hammacker, Schlemmer & Co.; firmer chisel, 1'', Buck Bros., sharpened and handled; firmer chisel, $\frac{1}{4}$ '', Buck Bros., sharpened and handled; oil stone, 6'' x $1\frac{7}{8}$ '', Washita, in case; auger bit, $\frac{1}{2}$ '', Russell Jennings; auger bit, $\frac{1}{4}$ '', Russell Jennings; brace, No. 13, Barber's patent; screw-driver, No. 77, Hammacker, Schlemmer & Co.; try square, No. 12, Hammacker, Schlemmer & Co.; sliding T-bevel, No. 25, Hammacker, Schlemmer & Co.; marking gauge, No. 143 M., Hammacker, Schlemmer & Co.; two-foot rule, No. 42, Hammacker, Schlemmer & Co.; bench brush, No. 2, Hammacker, Schlemmer & Co.; zinc oiler, No. 1, Hammacker, Schlemmer & Co.; nail-set, octagon, black, Hammacker, Schlemmer & Co.; sloyd knife, Chandler & Barber's.

One also of each of the following: Jointer, No. 30, Bailey's patent; rip-saw, No. 7, Disston's patent, 22''; cross-cut saw, No. 7, Disston's patent, 22''; steel square, No. 8, Hammacker, Schlemmer & Co.; set Russell Jennings' bits, $\frac{1}{4}$ ' to 1'', in box; set Morse's bit-stock drills, $\frac{3}{32}$ '', $\frac{1}{8}$ '', $\frac{5}{32}$ ' and $\frac{3}{16}$ ''; 1 dozen handscrews, No. 13, Bliss' patent; 1 pair cabinetmaker's clamps, Bliss' patent, maple, open 2 feet; spoke shave, No. 53, Hammacker, Schlemmer & Co.; pair of plyers, 8'', Button's patent; wrench, 8'', Coe's patent; grindstone, No. 10, Hammacker, Schlemmer & Co. (mounted—iron frame, 24'' x 2 $\frac{1}{2}$ '' thick).

CARVING TOOLS.

Twenty-one of each of the following: No. 1, $\frac{3}{4}$ '', Addis' patent, handled and sharpened; No. 1, $\frac{1}{4}$ '', Addis' patent, handled and sharpened; No. 2, $\frac{5}{16}$ '', Addis' patent, handled and sharpened; No. 3, $\frac{7}{16}$ '', Addis' patent, handled and sharpened; No. 3, $\frac{3}{16}$ '', Addis' patent,

handled and sharpened; No. 5, $\frac{1}{2}''$, Addis' patent, handled and sharpened; No. 11, $\frac{1}{16}''$, Addis' patent, handled and sharpened; mallet, $2\frac{1}{2}''$ face, hickory.

For general use in carving, as follows: Two of No. 39, $\frac{1}{8}''$, Addis' patent, handled and sharpened; 3 of No. 1, $\frac{1}{16}''$, Addis' patent, handled and sharpened; 1 of No. 21, $\frac{3}{32}''$, Addis' patent, handled and sharpened; 1 of No. 22, $\frac{3}{16}''$, Addis' patent, handled and sharpened; 1 of No. 23, $\frac{1}{4}''$, Addis' patent, handled and sharpened; 1 of No. 39, $\frac{1}{2}''$, Addis' patent, handled and sharpened; 1 of No. 7, $\frac{7}{16}''$, Addis' patent, handled and sharpened; 1 of No. 6, $\frac{7}{16}''$, Addis' patent, handled and sharpened; 1 of No. 8, $\frac{3}{16}''$, Addis' patent, handled and sharpened; 2 of No. 10, $\frac{3}{32}''$, Addis' patent, handled and sharpened; 1 of No. 11, $\frac{3}{32}''$, Addis' patent, handled and sharpened; 1 of No. 13, $\frac{3}{16}''$, Addis' patent, handled and sharpened; 1 of No. 24, $\frac{7}{16}''$, Addis' patent, handled and sharpened; 1 of No. 24, $\frac{3}{16}''$, Addis' patent, handled and sharpened; 1 of No. 27, $\frac{7}{16}''$, Addis' patent, handled and sharpened; 2 of No. 3, $\frac{3}{4}''$, Addis' patent, handled and sharpened; 2 of No. 4, $\frac{3}{32}''$, Addis' patent, handled and sharpened; 1 of No. 5, $\frac{5}{16}''$, Addis' patent, handled and sharpened; 1 of No. 7, $\frac{5}{32}''$, Addis' patent, handled and sharpened; an assortment of oil-stone slips, in 5-pound box, Hammacker, Schlemmer & Co.

TOOL OUTFIT FOR MECHANICAL DRAWING.

Twenty sets of instruments consisting of: (a) 1 compass, $3\frac{1}{2}''$, with pen, pencil and needle-point, No. 900.

(b) 1 drawing pen, with point, No. 922.

(c) 1 box, with leads, Nos. 830 to 931; 200 drawing boards, $16'' \times 22''$, Milton, Bradley & Co.; 200 T-squares, No. 2,300, Milton, Bradley & Co.; 20 rubber triangles, $30^\circ \times 60^\circ \times 8''$ (1,802), Milton, Bradley & Co.; 20 rubber triangles, 45° , No. 1,804, Milton, Bradley & Co.; 20 scales, $12''$, Milton, Bradley & Co.; 1 curve, No. 4, Milton, Bradley & Co.; 1 curve, No. 19, Milton, Bradley & Co.; 1 curve, No. 16, Milton, Bradley & Co.

OUTFIT FOR TURNING.

One foot-lathe, for wood. One of each of the following: Gouge, $1\frac{1}{4}''$, handled and sharpened, Hammacker, Schlemmer & Co.; gouge, $\frac{1}{2}''$, handled and sharpened, Hammacker, Schlemmer & Co.; chisel, $1\frac{1}{4}''$, handled and sharpened, Hammacker, Schlemmer & Co.; chisel, $\frac{3}{4}''$, handled and sharpened, Hammacker, Schlemmer & Co.; chisel, $\frac{3}{8}''$, handled and sharpened, Hammacker, Schlemmer & Co.; chisel, $\frac{1}{4}''$, handled and sharpened, Hammacker, Schlemmer & Co.; round nose, $\frac{3}{8}''$, handled and sharpened, Hammacker, Schlem-

mer & Co.; parting tool, $\frac{3}{4}$ "', handled and sharpened, Hammacker, Schlemmer & Co.; pair of callipers, 5"', Hammacker, Schlemmer & Co.; scale, 12"', Hammacker, Schlemmer & Co.

UTENSILS FOR SCHOOL KITCHEN.

One coal stove, the "Glenwood," No. 8 (copper boiler attachment); 15 small gas stoves, the "Jewel;" 15 high stools, 6 chairs; 1 set meat charts—mutton, beef, veal, pork—from Pratt's Institute; 2 charts, Nos. I. and II., average composition of common food; 16 Boston School Kitchen Books; 15 double boilers, small, tin; 1 double boiler, 3 pints, granite; 1 wire broiler, small; 15 coffee pots, 1 pint, planished tin; 15 collanders; 15 measuring cups, $\frac{1}{2}$ -pint, divided into quarters; 1 quart measure; 1 cooky cutter; 15 egg-beaters, Dover; 2 dozen kitchen forks; 15 dozen graters; 1 nutmeg grater; 1 griddle, iron, for No. 8 stove; 2 chopping knives, No. 4, Knowles Hardware Co.; 12 kitchen knives; 15 vegetable knives; 2 bread pans, tin; 8 dish pans; 1 large frying pan; 1 bread knife, Lawson; 15 brushes, 5 inches long, wooden back; 2 chopping trays; 15 potato mashers; 15 small frying pans; 1 dripping pan, iron; 1 pot cleaner; 2 sifters, tin—small size sieve, with crank; 15 skimmers, small, tin; 2 large spoons, granite; 1 toasting fork; 2 dozen tablespoons, tin; 1 tea-kettle, granite, No. 8 stove; 15 strainers, small size, tin; 1 saucepan, 4 quarts, with cover, granite; 15 saucepans, 1 pint, with cover, granite; 15 mixing bowls, 3 quarts, stoneware; 30 small bowls, stoneware; 1 pitcher, 2 quarts, stoneware; 2 baking dishes, 1 quart; 15 meat boards, 9' x 12'; 2 pails, 8 quarts, paper; 5 rolling pins, wood; 2 nests wooden boxes; 2 lemon squeezers, glass; 18 yards toweling; 18 yards crash toweling; 1 nest tin spice boxes; 15 kneading-boards, 16' x 20'; 4 crocks, 1 gallon each, stone; 15 saucepans, $\frac{1}{2}$ pint, granite; 18 round pans, 1 quart, 2" deep, granite; 15 teapots, smallest size; 2 dozen Mason jars, 1 pint; $\frac{1}{2}$ dozen Mason jars, 1 quart; 2 dozen jelly tumblers; 1 ice cream freezer, 3 quarts, "White Mountain;" 1 pail, with cover, 8 gallons, galvanized (for refuse matter); 2 bread boxes, tin; 1 iron pan and basket (frying-kettle); 1 Universal family scale; 1 Bristol brick; 1 board for the same; 1 hand-basin, paper, painted white; 1 dust-pan and brush; 1 towel rack; 18 dish-mops; 3 dozen dish-cloths, Turkish; 6 yards cheese cloth; 1 yard white duck; 5 yards crash, 30" wide; 6 yards hand toweling; 2 yards linoleum; 15 salt shakers; 15 pepper shakers; $1\frac{1}{2}$ dozen cups and saucers; $1\frac{1}{2}$ dozen plates; $\frac{1}{4}$ dozen meat platters; $\frac{1}{4}$ dozen vegetable dishes; 1 wooden box, for knives and forks; 3 wooden buckets, 3 gallons, with cover; 15 "Treatises on Food and Dietetics"—Dr. Pavy; 15 "Dietetic Value of Bread"—Goodfellow; 1 broom; 1 coal-scuttle; 1 fire-shovel; 1 large dust-pan and brush.

We purchased stock for joinery as follows: 2,200 pieces, finished on four sides, $10'' \times 2'' \times \frac{5}{8}''$, pine; 250 pieces, finished on four sides, $12'' \times 2\frac{3}{4}'' \times \frac{7}{8}''$, pine; 200 pieces, finished on four sides, $9\frac{3}{4}'' \times 5\frac{1}{4}'' \times 1\frac{1}{8}''$, pine; 1,800 pieces, finished on four sides, $9\frac{1}{2}'' \times 1\frac{5}{8}'' \times \frac{7}{8}''$, pine; 900 pieces, finished on four sides, $18\frac{1}{2}'' \times 3\frac{5}{8}'' \times \frac{1}{2}''$, pine; 150 pieces, finished on four sides, $18'' \times 2'' \times 2''$, pine; 650 pieces, finished on four sides, $15'' \times 7'' \times 1''$, pine; 12 board ft. of whitewood, surfaced on both sides, to $\frac{7}{8}''$ thickness; 12 board ft. of whitewood, surfaced on both sides, to $\frac{1}{2}''$ thickness.

Stock for carving, as follows: 75 pieces maple, $5'' \times 5'' \times \frac{5}{8}''$, surfaced and jointed; 150 pieces whitewood, $5'' \times 5'' \times \frac{5}{8}''$, surfaced and jointed; 660 pieces whitewood, $2'' \times 10'' \times \frac{7}{8}''$, surfaced and jointed; 270 pieces whitewood, $3\frac{1}{2}'' \times 10'' \times \frac{5}{8}''$, surfaced and jointed; 75 pieces gumwood, $3\frac{1}{2}'' \times 10'' \times \frac{7}{8}''$, surfaced and jointed; 150 pieces whitewood, $2\frac{1}{2}'' \times 10'' \times \frac{7}{8}''$, surfaced and jointed; 40 board ft. gumwood, surfaced on both sides to $\frac{7}{8}''$; 40 board ft. oak, surfaced on both sides to $\frac{7}{8}''$; 25 board ft. mahogany, surfaced on both sides to $\frac{7}{8}''$; 25 board ft. mahogany, surfaced on both sides to $\frac{1}{2}''$; 25 board ft. mahogany, surfaced on both sides to $1\frac{1}{2}''$; 25 board ft. maple, surfaced on both sides to $\frac{1}{2}''$.

Material for drawing, as follows: 8 reams paper, 4 universal, demy, $15'' \times 20''$; 2 gross Dixon's pencils, M. H.; 2 gross Dixon's pencils, H.; 6 gross thumb tacks, No. 2,677, $\frac{5}{16}''$; 3 dozen pencil erasers, No. 3,461; 3 dozen ink erasers, No. 3,440; 2 dozen bottles Higgins' ink (small); 4 boxes leads, for instruments, No. 3,371, H. H. H.

Stock for turning, as follows: 100 pieces pine in rough, $2'' \times 2'' \times 10''$; 100 pieces gum in rough, $2'' \times 2'' \times 10''$.

Stock for the school kitchen, as follows: Half-bbl. of flour, 25 lbs. granulated sugar, 1 tin box of each of the following spices: Pepper, mustard, cinnamon, allspice, cloves and nutmeg; 1 dozen cakes of soap, 3 boxes Gold-dust washing powder, 1 dozen cakes sapolio, 3 bottles ammonia, 3 cakes stove blacking, $\frac{1}{2}$ dozen boxes Knox's gelatine.

NOTE.—The remaining supplies, for the current year 1894-95, in the school kitchen, were left to be purchased as needed, being mostly perishable materials.

The above matters—the building, its preparation and furniture, the tools, the cases for the protection of these, and of the pupils' work, the various supplies, and last and most important of all, the teachers—these matters were a great care to us for a long time. Finally, order was brought out of chaos. And the results, now that we are fairly at work—200 boys and girls going each week, for a period of two hours, to the joinery and carving-room, and to the mechanical drawing-room, an hour in each room; and 120 girls, to

the school kitchen, an hour and a half each week—prove that we made no mistakes. The rooms, tools, cases, materials, are all right; also, the teachers. And, best of all, the young people are greatly interested. We have now entered the last term of the year, with no diminution of interest.

PATERSON.

To Addison B. Poland, State Superintendent :

SIR—I submit herewith statement of (a) plant and material; (b) character and amount of work done; (c) condition of manual training for school year ending June 30th, 1894:

(a) *Plant and Material.*—Fifteen double work-benches, each accommodating 2 students; 3 turning lathes, 2 sets of wood-carving tools, 90 tills for storing work, 30 rip-saws, 30 cross-cut saws, 30 back-saws, 30 1-inch chisels, 30 $\frac{1}{2}$ -inch chisels, 30 $\frac{1}{4}$ -inch chisels, 30 hammers, 30 bench hooks, 30 jack-planes, 30 smoothing-planes, 1 grindstone, shafting for machinery, 1 mortising machine, collection of whitewood and pine, collection of hard wood for turning and carving.

(b) *Character and Amount of Work Done.*—The work in manual training consists of (1) working-drawings for all joinery and carving; a series of twenty-five lessons in joinery and a series of special lessons in chiseling, &c. The work in carving includes floral designs and figures. The work in turning includes the simplest form of wood-turning and the more difficult forms, such as goblets, cups and other useful articles.

(c) *Condition of Manual Training.*—The work in manual training is simply work in wood. We have simply a workshop to which classes are sent at regular intervals from the upper grades of the elementary and all grades of the high school.

 City Superintendent.

RIDGEWOOD.

To Addison B. Poland, State Superintendent:

SIR—Our report upon manual training for year ending June, 1894, is as follows:

Plant.—All work is done in regular school-rooms with appliances especially adapted to the purpose.

Material.—Material for drawing consists of drawing-boards, T-squares, sets of triangles, compasses, pencils, erasers, rules, &c., suffi-

cient for about 100 pupils; also manilla and white drawing-paper, models, objects and casts.

Material for modeling—fine clay, stone crocks, oilcloth and slate covers for desks, models, moulding-boards and cloths for keeping work damp.

Material for sewing—muslin, canvas, thread, worsted, scissors, needles, thimbles, bags for work, boxes and closet.

Material for Wood-work.—(a) Whitewood tops for regular desks, pads of drawing-paper, compasses, T-squares, triangles, pencils, rules, knives, thin basswood.

(b) Pine tops for school desks, clamps, pegs, wedges for same, Addis carving tools of different styles, sufficient for thirty or more pupils, files, rasps, sand-paper, mallets, whitewood, bass, cherry, oak, &c.

(c) Cabinet-benches, planes, saws, chisels, squares, dividers, rulers, gauges, bevels, knives, hammers, braces, bits and clamps, sufficient for a dozen or more pupils, besides general tools, such as grindstone, miters, plows, &c.

Character and Amount of Work Done.—In drawing we follow White's "New Course in Art Instruction" through the first to fifth years, and in part through sixth to ninth. In these latter grades the drawing is made to conform, in part, more particularly to the course in construction, and consists of working-drawings for the work in paper, cardboard, carving and joinery, also geometrical problems, architectural drawing and special design.

Clay-modeling is taught in first to seventh grades in the following order: 1, circle; 2, square; 3, circle on squares; 4, ellipse; 5, oblong; 6, ellipse on oblong; 7, ellipse on circle; 8, equilateral triangle; 9, isosceles triangle; 10, hemisphere; 11, half cylinder; 12, half cone; 13, half ellipsoid; 14, half ovoid; 15, pyramid; 16, vase forms; 17, fruit and vegetables; 18, rosettes; 19, winged globe; 20, Egyptian pylon; 21, Doric capital; 22, Greek lily; 23, Roman arch; 24, Greek echinus. Work may be continued with other forms of historic ornament, vegetable forms or from casts. It has been our practice, however, as soon as a pupil can work fairly well in clay, to stop its use and give wood as a medium from which to work out the typical historic ornaments, &c., *i. e.* carving.

Sewing is begun in the kindergarten and carried through the third year, with the use of pricked cards of various designs.

The fourth-year work includes basting, stitching, backstitching, running, over-sewing, hemming, buttonholing, cross-stitching, button-hole stitching, patching and darning on canvas. Fifth year—Measuring, cutting, running, gathering, basting, stitching and backstitching, felling, hemming, over-sewing, patching, gusseting, tucking, over-casting, banding and ruffling on coarse unbleached muslin. Sixth year—Similar but more advanced work, using fine cotton cloth, linen and flannel, also feather stitch, herringbone, hemstitch, practice in cutting, marking and embroidery. Seventh year—Advanced patch-

ing and darning on fine, plain and figured woollens, heavy cloths, table-linen and silk, using ravelings, fine worsted, linen and silk thread, stocking-darning, cutting and making underclothing. Eighth year—Measuring the form, making skirt and sleeves, embroidery.

In *wood-work*, pupils of sixth grade learn to accurately draw and cut out of $\frac{1}{8}$ " basswood such geometric forms as square, octagon, oblong, triangle, Greek, St. Andrew's and Maltese crosses, circle, quatrefoil, trefoil, hexagon, star, picture frames, calendar back, &c. In seventh grade, $\frac{1}{8}$ " and $\frac{3}{8}$ " basswood is used in fastening pieces together with glue and brads, forming butt, dovetail and mitered joints, frames, brackets, boxes, easels, &c. In eighth year, carving, in a series of graduated exercises, largely historic ornaments, ending with the application of carving to various articles of ornament and use for home and school. The ninth and tenth years' work consists of the usual exercises of a thorough course in joinery.

General Condition of Manual Training.—Lack of room has prevented the advance of the work in some ways, but in general we have succeeded in more than holding the ground gained in previous years. The beneficial effect upon regular school work is marked.

SOUTH ORANGE.

To Addison B. Poland, State Superintendent:

SIR—The following statement arranged under appropriate headings to accompany the manual training report of School District No. 28, Essex county, for the year ending June 30th, 1894, is respectfully submitted herewith :

PLANT AND MATERIAL.

Except a part of the work in drawing and modeling, the courses in manual training are given in a two-story structure, built of wood, which is situated a few steps away from the main building. It contains rooms specially equipped for the teaching of drawing, modeling, wood-working, carving and sewing.

The plant, other than the building and permanent cabinets, shelves, &c., consists, briefly, as follows :

In Drawing.—A complete set of Prang's models, plaster casts and geometrical forms.

In Modeling.—Plaster casts, modeling-boards and tables especially constructed for this work.

In Wood-working.—Twelve double benches, with twenty-four complete sets of carpenter tools, scroll-saw and general tools.

In Carving.—Curved chisels for relief-carving, oblique knives for flat-carving, special tools for advanced work.

In Sewing.—Scissors for each pupil, emery bags and cabinets for keeping individual work.

Comparatively little expenditure was made this year for material. At the beginning of the fall term, a careful inventory showed that there was on hand, left over from last year, almost enough of material in each line to supply our classes during this year. On account of the appropriation for manual training being the smallest ever made for this purpose in South Orange, the strictest economy was rendered necessary, and the material used did not differ essentially in kind from that of the year before.

CHARACTER AND EXTENT OF WORK DONE.

In Drawing.—The work extends from the second year of the child's school-life, through every grade until the high school course is completed, and comprises free-hand and mechanical drawing, object-drawing and designing, including the practical study of historical ornament. Two lessons of forty-five minutes each are given every week.

In Modeling.—This work also extends from the second year, through the primary and grammar grades, and the high school. It is taken up under the headings, building of tiles with geometric forms, fruit and leaf forms in low relief, and work from simple casts. One lesson a week is given to each class.

In Wood-working.—This course is given to the grammar grades alone, viz., the fifth, sixth, seventh and eighth grades. During the first two years only a few simple tools are allowed, as the knife, saw and try-plane. The use of all the ordinary carpenter tools is taught for the rest of the course. One hour a week throughout the four years is devoted to this course.

In Carving.—The course covers the four years of the high school grades, and includes Swedish or flat wood-carving and relief-carving from original designs made by each pupil. The length of the lesson is one hour and is given once each week.

In Sewing the following operations are thoroughly taught: Running, stitching, basting, overhanding, hemming, felling, French seam, patching, darning, cross-stitching, gathering and putting on band, feather-stitching, buttonholes, embroidery on flannel and linen. One lesson each week is given to the girls of the fourth, fifth, sixth, seventh and eighth grades. In the two highest grades a choice is offered to the girls between sewing and carpentry. This year all of these two grades chose the latter subject, with seemingly excellent results.

GENERAL CONDITIONS.

At no time in the history of manual training in South Orange has the subject been so popular and so well appreciated as during the past year. It has been satisfactorily demonstrated here that pupils who take the manual training work do not fall behind in their classes, but, on the contrary, are aided in general intelligence and aptitude for their other studies by the zest and training which they derive from their manual work. It proves to be one of the most potent of means of intellectual and moral development. This fact is shown by the comparative want of definiteness of thought and expression power, as well as of action, on the part of pupils who come to us from private and other schools not offering the advantages of a manual training.

The annual exhibition of work done by pupils, held in May of this year, was attended by the largest number of people ever in attendance at these exhibits, and not an expression of dissatisfaction or disparagement of the system was heard from anyone. Praise of this exhibit was universal.

Much credit is due to the persevering energy, ability and unselfish and painstaking devotion to duty of Miss Elizabeth Trippett, who during the four years of her connection with this school has given her time, talents and enthusiasm for whatever she undertakes, unsparingly, to the furtherance of the success of this department. It is with great regret on the part of the parents and pupils in this community that she has felt obliged to resign her position.

At the annual school meeting in April the sum of one thousand dollars was asked for and granted without a dissenting vote by the taxpayers for the support of manual training. Perhaps no stronger comment in its favor need be mentioned, as the appropriation of the previous year was only six hundred dollars.

9. *Total amount expended to date.*—\$500.

Respectfully submitted,

GEORGE J. McANDREW,
Principal.

TOWN OF UNION.

To Addison B. Poland, State Superintendent :

SIR.—Since my last report there have been no changes nor additions to the manual training plant in this town. In drawing, modeling and sewing, all of which are taught by the regular class teachers, the work is steadily advancing.

In wood-working and domestic economy, to which the pupils of the eighth, ninth and tenth school years were formerly admitted, we have allowed only the ninth and tenth year pupils to attend. This reduced the number to one-half, and gave the teachers of those departments, classes of from ten to twelve. The progress made in consequence, has been marked.

Particularly was this so of the wood-working, which had always been the weakest with us, and which now can compare favorably with other schools. The character of the work exhibited in June, showed intelligent and painstaking effort on behalf of all of the pupils. The course for the coming year will be the same as last year.

PRELIMINARY REPORT

TO THE

STATE BOARD OF EDUCATION

CONCERNING THE ADVANTAGES OF

The Township System.

(A)

PRELIMINARY REPORT.

TRENTON, January 7th, 1895.

To the Honorable the State Board of Education :

GENTLEMEN—In accordance with section twenty-one of the School law which prescribes my duties, I have the honor to submit to your honorable board the following brief summary of the benefits to be derived from the adoption of the township school system in place of the district system, which was abolished by act of the Legislature, approved May 25th, 1894.

I have appended also numerous citations from the reports of State Boards of Education, State School Superintendents, the Commissioners of Education of the United States, and other competent educational authorities, bearing upon the question of the superiority of the township school system over any other form of school organization, and particularly over the so-called "district" school system.

A careful perusal of these citations will show that the township school organization has been under constant discussion for over half a century. It will be found, moreover, that the almost unanimous verdict of those who have given the subject most careful study is unreservedly in its favor. Upon no other question connected with the organization and administration of schools was there ever so great unanimity of opinion. As far back as 1839, Horace Mann in one of his official reports made use of these words :

"I consider the law of 1789, authorizing towns to divide themselves into districts, the most unfortunate law on the subject of common schools ever enacted in the State of Massachusetts."

This unbiased judgment of the most distinguished of American educators, pronounced over fifty years ago, has been affirmed over and over again by the highest educational authorities throughout the United States and the world.

That this essential weakness of our common-school system has been clearly apprehended by foreign educators is shown by the following :

"Hon. Francis Adams, Secretary of the National Education League of England, in his valuable work on 'The Free School System of the United States,' says (pp. 31-34):

"Although at first sight the area of a school district may appear to be an unimportant matter of detail, yet upon it, as the experience of the United States has proved, the efficiency of any school system largely depends. The most formidable

difficulty which the American system has encountered has arisen out of this question. This is what is known in the United States as the district system! * * * Wherever it still exists it is the subject of the most bitter complaint and condemnation amongst school superintendents and officers. * * * Most of the States have, after an extended trial of the district system, re-organized under the township plan; and the complete abolition of the former system, if it can be secured by the almost unanimous condemnation of school officers of all grades, would appear to be a question of time only."

So also Mons. F. Buisson, one of the most distinguished of European educators, in his report, &c., upon primary instruction at the universal exposition of Philadelphia, says (as translated in the Report of the Commissioner of Education for 1887, p. xxxix.):

"The district is a territorial unit not only too narrow but too variable to serve either as the basis for a wise distribution of school funds or for efficient supervision of the schools. Chance, caprice, sometimes the interests of a single family, or an insignificant village rivalry; sometimes also the prejudice or carelessness of a single man, may determine the fate of a locality, either burdening it with useless taxes, depriving it of any school whatever, or giving it a very poor one. The district system has been tried; it is not liberty, but chaos. Those who are engaged in elementary instruction with one voice demand its repeal."

The United States Commissioner of Education at Washington said in his report for 1877 (p. xxxix.):

"The oldest American educational idea was that of Massachusetts, which looked to one elementary school in every town containing fifty householders, with a grammar school where there were fifty more householders. A somewhat recent but more widely-spread idea was to have ordinary schools in every township, a higher school for each county, and a college or university for every State. The township was the unit of the whole school system, and many thoughtful men are questioning whether it ought not to be restored to that position, instead of being broken into incohesive fragments called school districts, as is common now. These being the invariable characteristics and results of the two systems, a number of the States are endeavoring to get rid of the district and substitute the township system. The voice of the State Superintendents is believed to be uniformly in favor of this change."

This unanimity of opinion among the most distinguished educators, foreign as well as American, would be most remarkable if the failure of the district system in the United States were not so patent and generally acknowledged by all who have made it a study.

Already twenty States have abolished the district system, either in whole or in part. During the present year it is expected that bills will be introduced into the Legislatures of at least six more States to make the change from the district to the township system.

It is to the everlasting credit of our own State that she aims always to be among the first to incorporate into her general law what seems to be for the interest of the whole people, particularly in matters relating to the public schools.

The Township act of 1894 is by no means perfect. But it is a long step, however, in the right direction.

There are several important respects in which the law of 1894 can-

be improved by future amendment. In other respects, where it is not yet clear how the law can be improved, time for due trial should be given before any radical change is made. The township principle, however, is unalterably right and should not be amended nor abridged in any manner whatsoever.

In a former communication to your honorable board, I summarized some of the chief advantages of the township system as follows :

1. *It equalizes school privileges.*—Under the old system the schools of the State have for many years presented the widest diversity, ranging from the most praiseworthy excellence to the most deplorable mediocrity. The village and larger graded schools, as a rule, have been constantly improving. The majority of ungraded rural schools, on the contrary, have gradually but surely deteriorated. This result is traceable to the absence of one or more of the following conditions : (a) suitable buildings and appliances ; (b) efficient grading and courses of study ; (c) school year of necessary duration ; (d) properly qualified teachers ; (e) efficient expert supervision ; (f) favoring local conditions.

Under the old system this inequality of conditions was bound to exist ; hence anything like equality of privileges was out of the question. In theory at least the State guarantees to every child equal school opportunities. This guarantee has amounted to nothing in the past, so far at least as the rural schools are concerned. The State school moneys raised by a uniform tax have been distributed to the several districts of the State upon the presumption that they would be intelligently and economically disbursed. But evidence is not lacking that in scores, if not hundreds, of the small districts into which the State was formerly divided, State school moneys have produced comparatively small returns.

By consolidating the school districts of a township and thereby unifying their administration, by making them a charge upon the taxable property of the whole township, and by opening them to all children residing therein, the first great step towards equality will be taken. Every child may then enjoy the best that the town affords.

2. *It equalizes school burdens.*—There is raised annually by State tax for the support of schools an amount equal to \$5 per capita for each and every child of school age, five to eighteen years, residing within the State. Of the amount so raised there is returned to each county 90 per cent. of the amount paid in by such county. The remaining 10 per cent. is distributed among the poorer counties by the State Board of Education in their discretion. Here, then, is the principle established of taxing the wealthier parts of the State for the benefit of the poorer.

Again, within the county school moneys are distributed to the several school districts at present as follows :

1. Two hundred dollars for each teacher employed the preceding year.

2. The balance per capita according to number of children of school age residing in the district. Here again the principle of the wealthier parts of the county contributing to the support of the schools of the poorer is clearly established.

Now, the township system goes only a step further, in the same direction, thereby securing a more just and equitable distribution of school moneys within the township for the benefit of all the children of the township. If the principle of taxing the wealthier parts of the State and county for the benefit of the poorer is fundamentally wrong, then it is admitted that the same practice when applied to the township is wrong. But not otherwise.

3. *It affords better school buildings.*—In the erection of new school buildings and in the repair of old ones, there was expended for the year 1893 the sum of \$748,718. So large an expenditure would naturally suggest the importance of the greatest economy. Now, economy in the erection of school buildings requires (a) that no unnecessary buildings be erected; (b) that the size and cost of buildings be proportioned to the number of pupils to be accommodated; (c) that considerations of health, convenience and special use be taken into account.

To illustrate the economy in the erection of new buildings which naturally arises from the consolidation of several school districts, take, for example, the case of township "A," comprising hitherto ten small school districts. All these several small districts have separate buildings of their own. Three are well filled with pupils; three are overcrowded; the remaining four not half filled. None of the buildings are modern in their construction; several are unsuitable for school use. It is decided to erect a new building in one of these districts. By the selection of a suitable site this new building can be made to accommodate the children of at least three districts as well or better than the buildings now used, and this without impairing in any degree the personal convenience or property rights of any individual citizen. So other advantages might be illustrated.

4. *It affords better school equipment.*—To carry on the schools of a township successfully, books and appliances of many kinds are requisite, such as maps, globes, charts, apparatus and other school supplies of various kinds. Owing to the recent enactment of a law requiring boards of education to furnish books and supplies free of cost to all pupils attending school, the matter of economical purchase, distribution and care of the same assumes great importance.

The purchase on a larger scale of all supplies by one township agent rather than a dozen or fifteen, more or less, as formerly, when district clerks of the several districts purchased supplies, will be a decided advantage. Greater care will be exercised to preserve the property of the township under the stricter rules that will be made

and enforced. By the township system, uniformity of text-books is also secured. This in itself is a great economy.

5. *It gives longer school terms.*—The small appropriation heretofore received from the State by districts having thirty children or less, of school age, to wit, only \$270, made it impossible to maintain the school for nine months in a year except by the employment of a cheap teacher or by raising a special tax. Few of the \$270 school districts under the old system ever supplemented their State aid by a special district tax. Hence the alternative of keeping the schools open for less than nine months, as the law requires, or a cheap teacher and consequently a poor school. Fear of losing the State appropriation induced trustees, as a rule, to prefer the cheap teacher. There were numerous cases, however, of shortening the school year so as to be able to hire a good teacher by the payment of a reasonable salary.

Under the township system it is believed that all schools will share and share alike. All will be kept open at least the full time required by law. Oftener, indeed, the length of the school year will be extended to nine and one-half, or even ten months, as now in most of the villages and cities of the State.

6. *It provides for a better grading of the schools.*—That graded schools are superior to ungraded schools, few will venture to deny. To maintain them economically, however, two conditions must always be present: first, there must be pupils enough in the district to grade; second, there must be taxable property enough to keep the cost of the schools within a reasonable limit. In the great majority of the townships of the State, both of these conditions will exist only when all the districts of the township, great and small, are consolidated into one. Then with increased numbers of children and increased rates, the schools of the township can be effectively graded with scarcely any additional cost.

The manifest impossibility of economical teaching, not to say grading, under the old system, is shown by the following table taken from my last annual report. It gives the number of school districts in the State having a school census five to eighteen years, of less than forty-five pupils:

SCHOOL CENSUS, 5-18. COUNTIES.	Less than ten.	Ten to fifteen.	Fifteen to twenty.	Twenty to twenty-five.	Twenty-five to thirty.	Thirty to thirty-five.	Thirty-five to forty.	Forty to forty-five.	Less than forty-five.
	Atlantic.....	1	3	3	1	3	4	1
Bergen.....	2	3	1	1	1	3	3	3	2
Burlington.....	1	1	1	3	3	3	26
Camden.....	1	2	1	3	3	1	7
Cape May.....	1	1	1	3	3	1	3
Cumberland.....	1	1	1	3	3	1	12
Essex.....	15
Gloucester.....	1	1	4	4	4	4	15
Hunterdon.....	2	1	3	4	4	5	25
Mercer.....	1	1	1	5
Middlesex.....	2	3	3	3	3	10
Monmouth.....	1	4	4	4	11
Morris.....	1	1	1	4	4	1	18
Ocean.....	2	14
Passaic.....	1	1	4
Salem.....	1	2	3	1	14
Somerset.....	4	3	3	3	16
Sussex.....	1	1	3	12	13	9	3	4	51
Warren.....	3	3	3	9	4	29
Total.....	7	9	16	31	51	65	65	36	280

Since the actual school enrollment will always fall far short of the number of children of school age, the table below is submitted, which gives the number of districts having less than ten pupils enrolled :

SCHOOL ENROLLMENT. COUNTIES.	Less than ten.	Between ten and fifteen.	Between fifteen and twenty.	Between twenty and twenty-five.	Between twenty-five and thirty.
Atlantic.....	4	3	12	3
Bergen.....	1
Burlington.....	3	3	12	3
Camden.....	1	3
Cape May.....	3
Cumberland.....	2	1	4
Essex.....
Gloucester.....	2	7
Hudson.....
Hunterdon.....	1	5	10
Mercer.....	1	3
Middlesex.....	2	1	3	3
Monmouth.....	5	4	4
Morris.....	1	1	2	3	6

Somerset.....	5	4
Sussex.....	5	7	14	8
Union.....
Warren.....	1	9	5
Total.....	7	23	26	72	73

Again, since the actual daily attendance is the best basis for determining the possibility of economical grading, the following additional table is also submitted, which gives the number of districts having less than ten pupils, &c. :

AVERAGE DAILY ATTENDANCE.						
COUNTIES.		Less than ten.	Between ten and fifteen.	Between fifteen and twenty.	Between twenty and twenty-five.	Between twenty-five and thirty.
Atlantic.....	5	3	10	5	4	
Bergen.....	1	5	1	9	4	
Burlington.....	12	21	14	13	12	
Camden.....	12	4	10	6	4	
Cape May.....	1	3	5	4	6	
Cumberland.....	3	5	7	12	7	
Essex.....				5	4	
Gloucester.....	4	12	7	8	4	
Hudson.....						
Hunterdon.....	6	19	19	13	12	
Mercer.....	4	9	15	8	6	
Middlesex.....	6	11	17	9	8	
Monmouth.....	2	16	11	9	11	
Morris.....	9	18	15	19	8	
Ocean.....	6	4	8	9	5	
Passaic.....	1	3	6	1	6	
Salem.....	5	9	11	14	8	
Somerset.....	10	10	18	7	6	
Sussex.....	16	27	15	11	7	
Union.....		1	2	3	1	
Warren.....	5	17	16	12	7	
Total.....	98	197	207	177	130	

It will be seen from the last table that of the 1,403 school districts of the State existing just prior to July 1st, 1894, when the township system went into effect, 809, or considerably more than one-half, had an actual average attendance of less than 30 pupils, a number much too small for economical grading or instruction. There is but one conclusion to be drawn from the above facts, namely, that the waste of teaching force, and consequent loss to the State, in past years has been enormous.

Under a properly organized and administered school system, pupils should complete the elementary course at the age of thirteen or fourteen years. Shall they be required to leave school at this early age, when each additional year spent in school is worth any two or three preceding years? Or shall they be permitted to remain and become an incubus on the time and attention of the elementary teacher, to the detriment of younger pupils? Clearly some provision should be made for them, since they are within the school age. At least one school of

a somewhat higher grade should be maintained in each township to meet the needs of this class of pupils.

7. *It insures more carefully selected teachers.*—The competency or incompetency of the teacher determines more largely than any other one factor the efficiency of a school. But competent teachers can be had only by the payment of fair wages and by continuous employment. The small sum received by many districts under the old system, to wit, \$270, was usually inadequate to secure competent and experienced teachers. Under the township system boards of education will be expected to give all schools within their jurisdiction equally good teachers. Teachers doing the same work will receive the same compensation. This will tend to elevate the rural schools, for they will enjoy the services of as good teachers as the village schools. Greater care will be exercised in the selection of teachers. Favoritism in the appointment or promotion of teachers will be less frequent. Merit will be rewarded by transfers to the more desirable positions. This will stimulate the ambition of teachers to excel. Inefficient teachers will be discharged with less compunction by township boards. Personal, family, church and other considerations of a like nature will play a smaller part in the selection of teachers.

8. *It is the absolutely prerequisite condition for any efficient supervision.*—Next to the teacher ranks in importance the supervision of a school. Under the district system the great majority of schools enjoyed no supervision. The first great change that will follow consolidation of school districts will be the appointment by the township board of the best teacher in the township as a supervising principal. He will frame a course of study for all the schools of his township. He will instruct his teachers in methods of teaching. He will see that his methods are properly carried out. In general, he will, for the first time, infuse system and harmony into the schools of a township. That the cities and larger villages of the State have better schools than the rural districts is due in no small degree to the fact that competent superintendents are employed to lay out and direct the school work.

9. *It arouses the interest and increases the attendance.*—Good schools are usually well-attended schools; poor schools encourage pupils to stay at home. Graded schools, since they afford superior advantages, help to keep children longer in school. After the age of thirteen or fourteen years, most bright children find little to interest them in an ungraded school, where, from the nature of the case, they can receive only a small amount of the teacher's time and attention. The school age in our State is fixed by law at five to eighteen years, inclusive; hence there should be at least one good school in the township, and more if needed, where pupils from thirteen years of age upwards may obtain instruction suitable to their years. The establishment of one high-class graded school would be an unspeak-

able boon to thousands of children who now feed on husks in schools far below their capacity and attainments.

10. *It leads to more economical expenditures while providing better schools.*—Under the district system, a great deal of money was annually wasted, in the following ways :

1st. By the expenditure of money for repairs of old buildings, which should have been disused altogether or replaced by others needing no repairs.

2d. By the erection of unnecessary buildings, where one new building could be made to accommodate two or more districts, as they formerly existed.

3d. By the purchase of books and supplies in small quantities and by a large number of different persons. Under the old system, the district clerk made the purchases, and there were as many district clerks as school districts. Hereafter one person only will be purchasing agent for an entire township, under the direction, of course, of the township board of education. There will be little chance for loss by reason of carelessness, incompetency, or dishonesty as compared with the old system.

11. *It fosters higher ideals of education in the public mind, and is in thorough accord with the evolution of public schools in this country.*—It is one of the most hopeful signs of the times that so great attention is being aroused throughout the State among those heretofore indifferent to the needs of the schools. The most insidious, and for that reason dangerous, enemy of our American free common-school system is the *laissez faire* spirit that would rest upon the maxim “let well enough alone.” It is the argument universally raised against all improvements.

We should still all be savages if civilization had waited upon any such law of development. On the contrary, nothing but evil can be “well enough” if “let alone;” and of all the great forces that make for wisdom and righteousness, the school least of all can afford to be “let alone.” Under the operation of natural law, schools will either advance or retrograde; to stand still is impossible. We see great progress being made in the school systems of other States. Shall New Jersey lead or follow? I am proud to believe that the wisdom of those who make the laws for the people of New Jersey will never sanction the repeal of a system which has commanded the approval of the highest educational authorities everywhere, certainly not until after having given it a fair and impartial trial.

I have the honor to be

Your obedient servant,

ADDISON B. POLAND,

State Superintendent.

I. LETTERS IN REPLY TO RECENT OFFICIAL INQUIRIES.

PENNSYLVANIA.

HARRISBURG, December 3d, 1894.

DEAR SIR—Since the township is the unit in local government, it is undoubtedly superior to any other basis of control in school affairs. Where the system of district control is in vogue, too many persons must be reached before any extensive reforms can be introduced. Our system of six directors for a township has been tried for many years, and, so far as I know, no one is anxious to exchange it for any other system. The cities in our State which have but six directors or controllers have better management in school affairs and make more progress than the cities which, by special acts of Assembly, have a larger membership in their boards of control. Where the responsibility is too much divided, it is well-nigh impossible to secure needed reforms and to prevent dissension and strife in the letting of contracts for buildings, text-books, &c. When a school board fails to break a tie vote the court removes them and appoints others in their place.

Very truly yours,
N. C. SCHAEFFER,
State Superintendent

OHIO.

COLUMBUS, December 5th, 1894.

DEAR SIR—In reply to your letter of November 30th, I beg to state that I am still of the opinion that the township school system is superior to the sub-district system. In the townships of this State, in which our township law is enforced in the proper spirit, good results are secured.

Very respectfully yours,
O. T. CORSON,
Commissioner.

MICHIGAN.

LANSING, November 30th, 1894.

DEAR SIR—Your favor of the 26th, inquiring concerning the township system as compared with the district system, is received. In reply, I will say that I am decidedly in favor of the township system. I send to you by this mail a copy of the school laws of the State, in which you will find a chapter giving the township unit law, and I also send you a paper written by Mr. C. W. Hills, of Pentwater, Mich., giving very plainly the opinion of the majority of the best school men of the State.

Very truly yours,
HENRY R. PATTENGILL,
State Superintendent.

MAINE.

AUGUSTA, November 27th, 1894.

DEAR SIR—My opinion of the township, compared with the district, school system is pretty clearly shown in the fact that annually, for twelve years, in my reports I argued for the adoption of the former system. I believe—and the experience of

about one-third of our towns which had voluntarily made the change before, by act of the Legislature, the district system was abolished throughout the State is the basis of that belief—the township system is far superior to the district system, as it existed in Maine, in the following particulars: 1. It gives equality of school privileges and school burdens. 2. It results in better school buildings better furnished. 3. It secures better teachers more permanently employed. 4. It leads to better supervision—local. 5. There is under it greater economy in expenditures. 6. It allows—leads to—consolidation of small schools. 7. In short, it gives every child in the township better instruction, for longer terms under better teachers, in better school-rooms, in schools of equal length better cared for and at no greater expense. I send you under another cover documents relating to the change.

Very truly yours,

N. A. LUCE,
State Superintendent.

NEW YORK.

ALBANY, November 30th, 1894.

DEAR SIR—The question of township system has, for a number of years, been under consideration by the school commissioners and other leading educators of this State, and several attempts have been made to have laws enacted to have the township system supersede the district system, but owing to conflicting interest and strong opposition interposed by corporations, all efforts, so far, have failed. I am satisfied, from the examination I have given the subject, that the character and efficiency of the common district schools would be materially enhanced by the change, for the reason that it would obviate the opportunity that now exists of using favoritism in the employment of teachers who are not well qualified to teach. Trustees, under the present regime, are apt to employ persons to teach who are incompetent, through the influence of neighbors and friends. I think this influence would not reach a town board so readily. Then, boards of trustees are reduced to a small number for a whole town instead of having one or three for each district. The chances are that better persons could be selected when only a few are chosen to compose the board instead of so many. The board, then, would be removed from so many temptations of favoritism. Control would become centralized; the system would be uniform for the whole town; the rate of taxation would be made uniform, &c., and, in my opinion, the result would be, that we would have a better class of teachers with a more permanent tenure of office, better school buildings and uniform text-books.

Very truly yours,

J. F. CROOKER,
State Superintendent.

TEXAS.

AUSTIN, December 4th, 1894.

DEAR SIR—Replying to your letter of the 28th ultimo, permit me to say that I regard the township system as the best of school systems, and I am doing what I can to induce the consolidation of districts in this State, with a view to adopting something like the township system as soon as it can be done.

Most respectfully,

J. M. CARLISLE,
State Superintendent.

WISCONSIN.

MADISON, November 27th, 1894.

DEAR SIR—The Legislature of 1893 appointed me a special commissioner to revise the laws relating to common schools. You also know that Wisconsin has two systems of school government, one known as the independent district system, the other as the township system. In considering the revision, which will be submitted at the proper time, the propriety of further extending the operation of the township system will probably call for discussion. The advantages of this system were urged at length and with great ability by State Superintendents Lyman C. Draper, in 1858; J. L. Pickard, in 1863, and John G. McMynn, in 1867. It has been approved by

their successors in office without exception. It has stood the test of experience in Pennsylvania, Massachusetts, Ohio, Maine, New Hampshire, Vermont and other States. The idea is therefore not a novel one and its introduction would be no experiment. I inclose a copy of that portion of my address before the Wisconsin Teachers' Association which relates to this subject, and request a careful reading of it.

Respectfully,

OLIVER E. WELLS,
State Superintendent.

IOWA.

DES MOINES, November 24th, 1894.

DEAR SIR—I cannot too strongly commend the civil township as the unit of organization for all except cities and villages. Such a district possesses many advantages over any other in simplicity of organization, uniformity of taxation, economy of management and general efficiency. Unfortunately for Iowa, our system is still burdened with a large number of small, weak, independent rural districts, many of them unable to maintain a good school. By this unfortunate system of unequal taxation and excessive subdivision, the theory that all children shall receive equal school privileges is sadly defeated in practice. I hope the day is near when our law will be changed so as to afford the needed relief.

Yours respectfully,

HENRY SABIN,
State Superintendent.

GEORGIA.

ATLANTA, November 23d, 1894.

DEAR SIR—In Georgia we have no townships, and each county comprises a school district, with the power granted to the local authorities to divide the county into as many sub-school districts as convenience, density of population, &c., require. The governing authority in the county is a board composed five members, selected by the grand jury and commissioned by the Governor. These hold their offices for four years. We find that this system works better than any other that we could adopt here in Georgia, and my opinion is that it is the best course to pursue where there are comparatively few large towns.

Very truly yours,

S. D. BRADWELL,
State School Commissioner.

NORTH DAKOTA.

BISMARCK, December 3d, 1894.

DEAR SIR—We have both township and district systems in this State. As a whole, the township system is preferable to the district system. It requires fewer officers, is less expensive in consequence, and in thickly populated States, where it can consist of but one congressional township, is easily arranged so that no hardship is imposed upon the teachers or upon the school board. It makes fewer reports to the county superintendents, and the reports are more accurate, require fewer blanks, and the schools in a township county are more easily and better graded.

Very truly,

LAURA EISENHUTH,
State Superintendent.

INDIANA.

INDIANAPOLIS, November 27th, 1894.

DEAR SIR—Replying to your recent favor, would say that we have not had the district system in vogue in our State since I was old enough to know of its workings. I learn, however, from older men who have worked in both systems that the township system is vastly superior to the district system.

Very truly,

HARVEY D. VORIES,
State Superintendent.

COLORADO.

DENVER, November 22d, 1894.

DEAR SIR—I am making a fight for "State" supervision. The smaller the territory, the greater the distress put upon part of the people. I want the sparsely settled farming and mining districts to get the benefit of the taxation in our financial centers. The district system is a grievous wrong to the very people who are unable to help themselves.

Very truly yours,

J. F. MURRAY,
State Superintendent.

RHODE ISLAND.

PROVIDENCE, November 27th, 1894.

DEAR SIR—I am very glad to give you my opinion upon the "town" vs. the "district" system of school management. From an experience of twenty years here in this State, I am very clear in my own mind that there is not one single advantage in the district system over the town system. I know of no point to be gained under the district plan which may not be as well, or better, secured under the town plan. On the other hand, the disadvantages of the district system are so numerous that it is difficult to enumerate them. The fundamental weakness of the district system is its double character, dividing powers and responsibilities. The chief results to be gained through the town system are: Economy of administration, equality of advantages, efficiency of service, which are impossible to be secured through a district system. I have the honor to be,

Very truly yours,

THOS. B. STOCKWELL,
Commissioner.

DISTRICT OF COLUMBIA.

WASHINGTON, November 23d, 1894.

DEAR SIR—No single action of those in authority will accomplish so much good to a system of schools as the union of the smaller units of management existing in most States into larger ones. A township seems to be the right size, most nearly corresponding to that of village or city. The chief cause of poor schools in the country districts of the States is the great number of small units of management, each of which is too small to afford opportunity for systematizing a course of instruction and a profitable system of work. It is also too small to demand the attention of a competent board of management, and consequently too poor to afford the services of a competent head and director of instruction. The township can secure the one because of the dignity and importance of the position, and afford the other because of its greater financial strength. A small district requires as great a variety of talent and acquirement, both in management and in directing, as a larger unit. The expense of organizing, planning for and properly directing the smaller schools, if conducted to conserve the best interests of every child in attendance, must necessarily be as great as that of service of like value for the school of a larger unit. The advantages of the township over the smaller district is that the township can easily, and therefore will, organize and properly direct a system of education, whereas the small district seldom, if ever, does so, because presumably of its financial incapacity. By the consolidation of a number of smaller units into a larger one, the expense of organizing, managing and directing a system of schools is not burdensome to the taxpayers, yet every child in the consolidated territory may be given all educational advantages afforded by the best system of schools found in the village or city. In union there is not only strength, but economy and increased possible advantage in many directions. I am,

Very truly yours,

W. B. POWELL,
Superintendent.

NEVADA.

CARSON CITY, December 3d, 1894.

DEAR SIR—Your letter received yesterday. The question you ask is one upon which I am not prepared to give an opinion. The situation in this State is very different from that in most States. Ours is a very large State, containing fourteen counties. It is very sparsely settled. Our counties most of them, are larger than some of the States in the Union. Schools are very scattered—in some of the counties they are fifty, or more, miles apart. Some of the valleys are settled, and then will intervene ranges of mountains for miles and miles. I think that in thickly-settled States the township system would work admirably. The district system here is unsatisfactory, and I think, sometimes, that it would be better to have all the schools in a county under one district board, which would employ and discharge teachers, locate schools—in short, attend to all school affairs. I think with you the township is far better than the present district system. As I told you at first, it is all theory with me. I have had no practical knowledge of the workings of the township system. I think it has been tried in some places and found to work well.

Very truly,

ORVIS RING,

State Superintendent.

VERMONT.

MONTPELIER, December 1st, 1894.

DEAR SIR—Wish I could aid you. I know of the battle in which you are engaged and feel like sending you an encouraging missive. The town system is based on the principle, "The greatest good to the greatest number." It will ultimately prevail.

Advantages of the town system over district system after one year's trial of the former in Vermont:

1. *Better Teachers.*—The cheap, inefficient ones employed in remote communities eliminated, and better-equipped and better-paid ones substituted.

2. *Better Supplies.*—Every school board nearly has furnished school-houses with needed appliances.

3. *Better School-Houses.*—No year in Vermont ever saw so many new school-houses built, nor ever saw so many repaired.

4. *Better Management.*—The number of town superintendent visits increased 25 per cent.; of school committee, 125 per cent. The average school director is a far better business man than the average school committeeman under the district system.

5. *More Schooling in the Ungraded Schools.*—Under the town system, there was an average of more than three weeks more schooling in the ungraded schools than under the district system.

6. *More Economical.*—The cost per week has been less than under the district system. More and better schools at less cost.

7. *Equity in Tax Burden Secured.*—Education is a common good—demands common support—hence, by town system, each contributes his just proportion to the common good.

8. The conclusion of the whole matter is, *better schools*, more and equal educational privileges.

Very truly yours,

MASON S. STONE,

State Superintendent.

MISSOURI.

JEFFERSON, November 29th, 1894.

DEAR SIR—I have yours of November 26th, asking my views upon the township as compared with independent district organization. In my opinion, township organization is vastly superior to independent district organization, giving to the taxpayer much larger returns for his investment, and to the pupils and patrons greater convenience and efficiency. I think your State is very fortunate, indeed, in securing

township organization. There will be some objections at first, as there is to everything new. But the best educators of this country feel that *New Jersey, in securing township organization, has forged a long way ahead of the other States.*

Fraternally yours,
L. E. WOLFE,
State Superintendent.

MISSISSIPPI.

JACKSON, November 29th, 1894.

DEAR SIR—We have the district system in Mississippi. This is necessary because of the unequal distribution of the races. For a homogenous population there is no question, in my judgment, of the superiority of the township system. The development of country schools is the overshadowing problem in American education. They need organization under strong directive power. The township system is best adapted to promote this essential feature. After an exhaustive study of the subject I am prepared to indorse the township system as the one which embodies the elements of greatest strength and effectiveness.

Yours truly,
J. R. PRESTON,
State Superintendent.

MINNESOTA.

ST. PAUL, November 29th, 1894.

DEAR SIR—It is gratifying to me to know that your State has finally adopted the township unit system of schools. From what I have seen of the operation of that plan in New England, and particularly in Massachusetts, the evidence is conclusive that the best results can be reached under no other. Before recommending it in my Biennial Report, which is now in the printer's hands, I communicated with State and county superintendents, with normal schools and other educators, and found them unanimous in the opinion that the district system had been tried and found wanting and must give way to the township. Hoping that Minnesota will, this winter, take her place beside the twenty progressive States that have already adopted the township unit, I remain,

Yours very truly,
W. W. PENDERGAST,
State Superintendent.

FLORIDA.

TALLAHASSEE, December 8th, 1894.

DEAR SIR—I have had no experience whatever with the workings of either the township or the district system, since in our State the county is the unit, and all school affairs are managed by the county superintendent and a county board of public instruction, consisting of three members. It is true we have what we call school districts, but no local government to speak of. We find this system works admirably, distributing as it does the burden of education equally upon all the county. With the light before me, next to this I believe I would favor the township system, as the district system is a little too democratic for even as sound a Democrat as I am. In school matters I would like to have as much as a county marching to the same step.

Yours truly,
WM. N. SHEATS,
State Superintendent.

UTAH.

OGDEN, December 3d, 1894.

DEAR SIR—I consider the township system preferable to the district system. For a number of years I have been thoroughly convinced of the inefficiency of the district system in the rural districts of this Territory. The Territory being comparatively young, the population is not so dense as that of the older or oldest States, as your State, for instance. I have, therefore, favored a county organization of public

schools; that is, I have advocated the doctrine of uniting all the county districts into one, to be under the supervision of a county board of education. This would enable the board to establish a system of graded schools, with a central or high school for the county. So far, we have been unable to secure the necessary legislation to effect such an organization, but we have secured the power, by legislation, to consolidate two or more districts into one, for the purpose of establishing high schools, which is productive of some good; but we require something more effective. I am mindful of the fact that the population of our most populous counties will demand several high schools to the county, and consequently a more perfect system of grading. Therefore, I am persuaded that the township is large enough to obtain all the privileges desired, and with the least cost for the product. Of course, we expect a greater product; more and better buildings; better supplies; better teachers; a better system of grading—in fact, we will have a condition throughout our rural districts which is impossible to obtain under the district system, and I am of the opinion that the districts should be abolished, and I think they will be under our new State organization.

Yours respectfully,

T. B. LEWIS,
Commissioner of Schools.

SOUTH DAKOTA.

CENTERVILLE, December 10th, 1894.

DEAR SIR—I would state that, originally a district advocate, I am now a strong supporter of the township plan as opposed to the district. I am not sure, however, but that I should prefer something resembling the Florida plan, or, better still, the Prussian system, which latter has accomplished such results as to compel the admiration even of her old antagonist. My prejudice against the township system arose, chiefly, from the bungling manner in which the accounts of the old corporations were adjusted. I helped to organize the move for a reaction, and we succeeded in getting a nondescript compromise between the two systems, and, verily, our last state is the worst of all. In the meantime, a careful watch of the two systems has satisfied me that the township system is better adapted to our present stage of civilization than the system which originated when the people of this country lived in isolated settlements without means of travel or communication such as we now enjoy, and I decidedly favor shutting up two or three school-houses out of every four in the county, putting a well-trained teacher (as good as they have in the towns) in the remaining school, keeping that school open more months, and furnishing transportation for the pupils to and from school. All this, however, cannot be done without the township machinery. In fact, any *modification* of the township plan will disappoint you, I think. We have had the township with a board of three members, also with a board of sub-directors, one from each school, and I am fully satisfied that the township organization should be similar to the Indiana system—one trustee for each township, with full control. I only see one objection to the Indiana system. The trustees choose the man (county superintendent) who is to hold them to the performance of their duty. It seems as though the appointment of county superintendents should be placed in the hands of some disinterested and non-partisan body as much as possible.

Yours very truly,

CORTEZ SALMON,
State Superintendent.

WYOMING.

CHEYENNE, December 1st, 1894.

DEAR SIR—In reply to yours of the 28th. In the older-settled States, it is my opinion that the township system would perhaps be preferable, but in a newly and sparsely-settled State like ours it seems almost impracticable, and the district system better adapted, as it is almost impossible to conform to township lines.

Very truly,

STEPHEN T. FARWELL,
State Superintendent.

MASSACHUSETTS.

BOSTON, January 16th, 1895.

MY DEAR SIR--The division of our Massachusetts towns into districts for school purposes was ordered in 1789. In 1817, our school districts were made corporations and were empowered to hold property for the use of the schools. Because of changes in our Massachusetts conditions the school district system began to fall into disfavor and was finally abolished in 1882, after nearly half a century of earnest, and at times even bitter, discussion of the advantages and the disadvantages of the system. I take pleasure in sending you a pamphlet issued by our board of education forty-two years ago, in which you will find some evidence of this earnest discussion. The matter is all settled now with us. There may be here and there elderly people with a reverential regard for the old way, but nobody dreams of returning to the district system. We are not in the habit now of stating the arguments for the township system. We take it for granted that it is a better system.

Very truly yours,

FRANK A. HILL,

Secretary of State Board of Education.

II. EXTRACTS FROM STATE REPORTS*

ALABAMA (1875, '76, '84, '92).

(1892, p. 337.) "The town system is the only method of affording equal taxation, and giving to the poor man's child the same common-school advantages that the rich man's child enjoys. The people in all the towns having the town system, so far as reported, are satisfied that it is far better than the district plan. The town system has been adopted in nearly all the Northern States, and there is substantial agreement that wherever it had a fair trial it has resulted in better school-houses and better schools."—John A. Harris, State Superintendent.

(See extracts from Report of U. S. Commissioner of Education, 1881, '85.)

ARKANSAS (1876, '83, '86, '92, '94).

(1883-84, pp. 29-35.) "The following are some of the benefits that will be derived from the township system: 1. The building of better and more convenient school-houses. 2. The schools could be classified and graded with more ease. 3. Better teachers would be employed. 4. School terms would be longer. 5. Taxation would be equalized. 6. The school revenue would be more equally distributed. 7. Equal educational privileges could be extended to all parts of the township. 8. Children could attend the school that was most convenient. 9. School-houses would be better furnished. 10. The per capita cost of education would be diminished. 11. There would be but little uncertainty about district boundaries. 12. Reliable statistics and information could be more easily obtained. 13. There would be better management and supervision of the schools. 14. Text-books could not be so easily changed. 15. The school law would be simplified and better understood and obeyed."—Woodville E. Thompson, State Superintendent.

(1885-86, pp. 34-36.) "After two more years' experience with the present law, I am more firmly impressed with the wisdom of the change recommended in 1884."—Ibid.

(1892, pp. 26, 27.) "In many other cases the incomplete reports of the directors make it impossible for the examiner to make such a report as will present the affairs of the district truthfully. This difficulty will continue so long as the director is asked to do skilled work for no compensation. There are three remedies: 1. Pay the secretary of the board to collect the statistics and make the reports. This will cost more than the school fund will bear. 2. Create the office of county superintendent, and place this matter in his hands. 3. *Adopt the township sub-district plan*, with power in the secretary of the township board to do this work."—Josiah H. Shinn, State Superintendent.

(1894, pp. 13-19.) "The letters which come to me from directors and teachers in hundreds of districts show an alarming state of affairs. Public education may be a curse as well as a blessing. If education is to be afforded by the State, it must be of such kind as will conserve virtue and foster proper intelligence. The formula which passes as education in many of these weak and isolated districts is a parody and snare. The principles are defective and abnormal; the matter is wrong, and in many cases pernicious; while the teacher is narrow, ignorant and intensely bigoted. The cause is not far to seek. It is a district poverty. Directors cannot engage respectable teachers and employ men and women that under other circumstances would be

*These citations have been largely collated by Mr. C. W. Bardeen, of Syracuse, N. Y., to whom I desire to express my obligations.

rejected. These ignorant teachers engender vicious reasoning and practice. And in cases where sounder teaching prevails the poverty of the district enforces a shortened term. I desire to say, however, that the real cure for the district evil is the adoption of the township system."—*Ibid.*

See, also, extracts from Report of the U. S. Commissioner of Education, 1884, '85, '86, '87, '88.

CALIFORNIA (1866, '67, '71, '88).

(1854.) "Superintendent Hobbs * * * argued in favor of township school funds."—Swett (*History of Public School System*, 1876), 23.

(1856.) "Superintendent Hobbs * * * put in a special plea for township funds * * * and that the district system be abolished."—Swett, 24.

(1878-79, p. 40.) "In other words, one-half the school money is wasted through the incapacity and neglect of local officers, and this evil is of such magnitude, and is now so universally acknowledged, that several States are moving to substitute the township system of supervision for that of district trustees."—Ezra S. Carr, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1879, '85.)

COLORADO (1875, '78-84).

(1879-80, pp. 18, 19.) "The law of Massachusetts provides for the consolidation of districts and the expenditure of public money in conveying children living at a distance to and from school. There are many places in Colorado where this course would result in larger and better schools, for the same money that is now spent for short and often poor ones."—Joseph C. Shattuck, State Superintendent.

(1883-84, pp. 47, 48.) "If there be any way whereby a country district, with few people and a small amount of property from which to derive its revenue, can afford its handful of children as good educational advantages as its populous and wealthy neighbor, that way has not yet been found."—*Ibid.*

(See, also, extracts from Report of U. S. Commissioner of Education.)

CONNECTICUT (1853, '66, '67, '69, '82, '84-88, '90).

(1839, in *Common School Journal*, I., 162, 163.) "It is evident, from the first glance, that we have carried the district system too far. The whole tendency has been to constant division, so as to bring the school nearer to every man's door. But an accommodation in this respect is most generally purchased at the expense of a small and inconvenient school-house, a shorter school term and a cheap, poorly-qualified teacher."—Henry Barnard, State Secretary.

(1840. See *Common School Journal*, II., 201-203.) For union of schools in Hartford, *Common School Journal*, III., 179.

(1841, see *Common School Journal*, III., 244, 245.)

(1853, pp. 5-182.) This is a history of school legislation in this State, by Henry Barnard, State Secretary, and the appendix of thirty-four pages ends with a proposed legislative act providing for the consolidation of districts.

(1866, pp. 70-81.) "An argument for the township system, with illustrations of its working in New Haven."—Daniel C. Gilman, State Secretary.

(1867, pp. 78-83.) "The problem to be solved, when stated in its briefest form, is this: How can good schools be secured for the people of every nook and corner of the State, and how, at the same time, can good graded schools be secured in every thriving village, town and city?" A history of the act of 1866 is given.—Daniel C. Gilman, State Secretary.

(1872, pp. 107-169.) An historical sketch of legislation in this State, with the present Code.—B. G. Northrop, State Secretary.

(1875, pp. 112-117.) "The division of many of our towns into small, independent districts seems quite inexplicable to educators abroad, and it will surely seem so to the next generation in America. The system is doomed." A sketch is given of the working of the township system in Stamford.—*Ibid.*

(1877, pp. 122-124.) "The experience of your country, as well as that of Europe, is against the district system. The division of many of our towns into small, independent districts seems inexplicable to educators abroad."—*Ibid.*

(1878, pp. 69-71.) A favorable report of the working of the township system in Bridgeport.—*Ibid.*

(1880, pp. 127-130.) General discussion of the influence of township political organization.—*Ibid.*

(1885, pp. 59-61.) Argument in favor of a township high school.—Charles D. Hine, State Secretary.

(1886, pp. 88-100.) "This system will tend to produce efficiency in every branch of school work."—*Ibid.*

(1888, pp. 89-101.) Contains the arguments of Hon. E. B. Bailey in the Legislature.—*Ibid.*

(1890, pp. 141-157.) Report of Charles D. Hine, Secretary of State Board.

(See, also, extracts from Report of U. S. Commissioner of Education, 1873, '85, '86, '87, '88, '89.)

DAKOTA (1882-84).

(1882-84, pp. 28-31.) A history of school legislation. "The act approved March 8th, 1883, was an almost entirely new law, and was a new departure. It required the organization of school townships, and abolished school districts in all but eighteen of the older counties, and in these each board of county commissioners was authorized to put it in force. * * * It is now in full operation in sixty-five counties." (p. 55.) "The township system should be made uniform and general in its application." (pp. 66-79.) "The people have seen its operations and benefits. These are unmistakable. Though imperfect in some minor respects, and though put to trial under the most adverse circumstances, it has fully justified its claims to public favor. Its adoption has given Dakota as good a fame among the leading educators of the nation as any fact that has ever been used to advertise us favorably to the world."—W. H. H. Beadle, Territorial Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1886, '87, '88, '89.)

DELAWARE.

See Report of U. S. Commissioner of Education, 1887, '88.

ILLINOIS (1871-92).

(1873-74, p. 15.) "The most serious drawback * * * is believed to be our plan of small independent school districts. In a former report this subject was fully discussed and illustrated, and the greatly superior economy and efficiency of the township district plan was, it is believed, demonstrated."—Newton Bellemar, State Superintendent.

(1875-76, p. 137.) On the disadvantages of districts under special laws. (pp. 429-435.) "Among the following are some of the advantages to be derived by the township system: 1. It would secure equality of school privileges to all the children of school age in the township. 2. No more school-houses would be built and schools supported than are needed. 3. Better buildings could be provided. 4. It would end all disputes about district boundaries. 5. It would dispense with the large number of school officers and the number of school elections. 6. It would allow children to attend the school that is most convenient and desirable. 7. It would necessarily tend to a district uniformity of text-books, and consequently better classification. 8. It would secure for the schools better teachers, and more permanency for the teachers. 9. It would secure steady management and a more firm support of the schools, and remove the board further from petty neighborhood quarrels. 10. It would secure a more equitable distribution of the public funds. 11. It would diminish the aggregate expenses, and establish a uniform system of taxation. 12. More reliable statistics and information relating to school work could be obtained. 13. Individual favoritism

in the selection of teachers could not exist to the extent that it does at present. 14. It would secure better locations for school-house sites. 15. It would diminish the number of transfers from one district to another. 16. It would secure stability of district boundaries."—S. M. Etter, State Superintendent.

(1885-86, pp. ccxii.-ccxxiv.) "Hon. N. W. Edwards, the first State Superintendent of Illinois, urged the change, and every succeeding State Superintendent has espoused the cause"—Henry Raab, State Superintendent.

"The merits of the system in which the township instead of the district is made the legitimate school unit have been presented again and again to the State Teachers' Association. There is a tolerable degree of unanimity in favor of this system. * * * It would enable a community to combine with the advantages of the ungraded schools many of the best characteristics of graded schools at very slight expense. It would probably lead to better school buildings, more complete apparatus, better teachers, and a healthy sentiment of rivalry among the various schools of a township, and do away with the local jealousies and feuds which are constantly interfering with the efficiency of our country schools."—*Illinois School Journal*, ii., 282 (January, 1883), Professor E. J. James and Charles De Garmo, editors.

(1892, p. xcl.) "This reflection brings me to another one, and the last suggestion I have to make. Our country schools need closer supervision. There is more and better work done in city schools because of the supervision. Now, I am not of the opinion that in the country schools supervision is necessary for the enforcement of courses of study, for uniformity of attainments and all those measures which govern the city schools, but for the encouragement and assistance of the teachers and ascertaining whether each one makes the best of his opportunities for the good of the people of the district. There is now supervision by the county superintendent, and it is made incumbent upon him by law in Illinois; but when you consider a territory of 550 square miles, with 200 teachers scattered over it, you will see that close, nay, adequate, supervision is impossible. *If a law could be passed to enable the districts of a township to unite in appointing a competent teacher-superintendent to watch over the schools of the township, visiting them often, and doing all that a principal in a town or village school does, much in the way of better instruction and discipline might be accomplished.*"—Henry Raab, State Superintendent.

(See extracts from Report of U. S. Commissioner of Education, 1870, '76, '86, '87.)

INDIANA (1857, '69, '70, '79-86.)

(For brief history of school legislation see "The Indiana Schools and the Men who have Worked in Them," by James H. Smart, Cincinnati, 1876, pp. 32, 49.) The law of 1821 gave township trustees power to divide the congressional townships into geographical school districts. The law of 1852 "abolished the congressional township system and declared each civil township a township for school purposes, and the trustees thereof trustees for school purposes, and gave them full charge of the educational affairs of the township. Section 32 declared incorporated cities and towns to be school corporations, independent of the townships in which they may be situated, entitled to the proportionate amount of school funds, and authorized to appoint independent trustees, with powers to establish graded schools and power to levy taxes for their support," &c. "These two sections, exceedingly broad and liberal in spirit, as were the views of the legislators who made them, at once charged the whole educational machinery of the State with a new life. School-houses, large and commodious, were erected in the larger cities. Graded schools were established in rapid succession. Everywhere hope, enterprise, activity, the true spirit of educational progress and enthusiasm prevailed." These provisions having been pronounced unconstitutional, a new law was enacted, in 1865, containing essentially the same provisions. A sketch of the present system is given on pp. 197-212.

(1857, pp. 5-55.) Points out the difficulties arising from the imperfections of the law of 1852.—W. C. Larrabee, State Superintendent.

(1880, pp. 20-35.) Discusses the development of the Indiana system; (pp. 36-64) points out defects of the system; (pp. 65-76) defends certain features of the system. (p. 25.) "In the ideal system, the schools of all corporations are managed by not less than three school officers acting as a board of education. In a majority of the school corporations of Indiana, school affairs are managed by one person, and this person is

a civil officer, and is a school officer merely *ex officio*." (See, also, pp. 39, 40.)—James H. Smart, State Superintendent.

(1883-84, pp. 12, 13) "The territorial unit of the public school system is the township. The people of each township elect one trustee for a term of two years, to whom is entrusted the general business of the corporation and the management of its schools. The trustee purchases and holds in trust school property, locates and builds school-houses, provides furniture, apparatus and fuel, levying for such expenditures a local tax not exceeding fifty cents on the \$100, and one dollar on each poll. He selects, contracts with and pays the teachers, receiving for this purpose the State's tuition revenue apportioned to his township, and supplementing it with a local levy of not more than twenty-five cents on the \$100, and twenty-five cents on each poll. By his authority rules and regulations and courses of study are made and enforced. Cities and towns are co-ordinate with townships as independent school corporations. Each of these, through its common council, appoints a school board of three members, which exercises the same powers in the main as the township trustee. In cities of 30,000 or more population the school trustees are elected by the people, in numbers varying with the size of the city. Each country district, *i. e.* the patrons of one school, elects annually a director who has immediate control of the school property, makes temporary repairs, and exercises a limited authority under the direction of the trustee. The township trustees appoint a county superintendent of schools, who serves for a term of two years. He examines and licenses the teachers, visits the schools, holds a county institute each year, carries out the directions of the county board of education, receives and corrects the trustees' financial and statistical reports, makes reports to the state superintendent and exercises a general supervision over the schools of the county. The trustees of the townships and the presidents of the school boards in each county constitute the county board of education. It prescribes the text-books which must be used in the schools except those of cities, makes rules and regulations of a general nature, and determines a policy in matters common to all the corporations. Thus uniformity of administration throughout the entire county is secured."—John W. Holcombe, State Superintendent.

(1885-86, pp. 177-79.) Here is a summary of replies to a circular to county superintendents asking for opinions as to the township trustee system, sent out in consequence of the discovery of swindling or crime in connection with payment for school supplies. A large majority consider the present system the best that can be devised, but consider the district directors of no value.—*Ibid*.

Hints as to defects or developments of the system are found as follows in the *Indiana School Journal*: Multiplicity of school-houses, XXIV., 251-315 (June, 1879); Township graded schools, XXV., 412-417, XXI., 217; The trustee has power too absolute, XXX., 577, 578.

(See, also, extracts from Report of U. S. Commissioner of Education, 1881, '85, '86.)

IOWA (1864, '65, '70-87, '91).

(1870-71, pp. 33-35.) "The arguments * * * are unanswerable." Twenty-three advantages of the township system are named.—A. S. Kissell, State Superintendent.

(1872-73.) Five objections to the district and thirteen to the independent district systems are named (pp. 32-37), and the inefficiency of district supervision is pointed out (pp. 40, 41)—Alonzo Abernethy, State Superintendent.

(1874-75, pp. 15-22.) A history of the district system in Iowa is given, with a protest against its continuance.—*Ibid*.

(1878-79, pp. 57, 58.) Special objections to the system of independent districts are stated.—C. W. von Coelln, State Superintendent.

(1880-81, pp. 33, 34) "The civil township should be the unit, but it should not be divided into sub-districts, to be in part governed by a sub-director. The only objection to the township system should be the town or city district, as we have them now."—*Ibid*. [There is also in this report (pp. 57-60) a paper on this subject by P. S. Morton, county superintendent, in which nine advantages of the township system are stated.]

(1882-83, pp. 25-33.) Arguments and testimony in favor of the township system are reiterated.—J. W. Akers, State Superintendent.

(1884-85, pp. 165, 166.) "In the hope of simplifying this law, I urged upon the Twentieth General Assembly the necessity of consolidating rural independent districts into independent township districts. For reasons and under circumstances which need not be enumerated here, the law failed, and I am now of the opinion that until this unwise and ruinous system shall fall to pieces of its own weight, any recommendation which I might now make would be equally unavailing."—*Ibid.*

(1891, p. 39) "It is not our purpose, in this report, to argue the question of making the township the unit in our school system. The State Superintendent of Wisconsin, in his last report, says: 'The economic and educational advantages of the aggregation of the districts of a town, or a similar unit, under a single board of education, have been fully demonstrated by experience in this and other States.' *Nothing that we can add will strengthen the arguments so often laid before the Legislature.*"—Henry Sabin, State Superintendent.

(See extracts from Reports of U. S. Commissioner of Education, 1871, '80, '81, '88, '89.)

KANSAS (1883, '84).

(See extracts from Reports of U. S. Commissioner of Education, 1871, '72, '73, '84.)

KENTUCKY (1878, '84).

(See extracts from Reports of U. S. Commissioner of Education, 1884.)

MAINE (1869, '73-78, '84-87, '92, '93).

(1874, pp. 121-125.) "Letters are given showing the beneficial working of the township system in Orono, North Berwick and Kenduskeag."—Warren Johnson, State Superintendent.

(1876, pp. 121, 122.) NEEDS, 1. "The abolition of the district system."—W. J. Corthell, State Superintendent.

(1878, pp. 10, 11.) "A judicious re-arrangement of the school districts, then, or better still, their entire abolition, is a thing much to be desired."—N. A. Luce, State Superintendent.

(1884, p. 30.) "The foregoing analysis of the actual condition and needs of the schools, leads logically to these conclusions: First, That, in order to stop waste of school resources, to secure greater average length of schools, to equalize school privileges and the burdens of school taxation, to obtain a better class of teachers more permanently employed, to broaden and make more generally practical the instruction given, to improve the character of our school-houses and furnish them with the needed appliances for the best teaching, and to make supervision more efficient in any form, the school district system must be abolished."—*Ibid.*

(1885, pp. 57-62.) "To bring the schools to their fullest efficiency, the district system must go. It stands in the path of all other needed reforms. In short, the district system, as it is to-day, is the embodiment of educational injustice and inequity, inefficiency and waste, unsystem and unthrift, and is a hindrance and a bar to any considerable educational improvement."—*Ibid.*

(1886, pp. 36, 37.) "Legislation needed—3. A law summarily abolishing the school district system in all towns of the State. No single measure of reform possible could be adopted which would reach and cure so many defects in our school system."—*Ibid.*

(1887, pp. 14, 15.) "At the annual meeting held within the school year, fifteen towns abolished the district system."—*Ibid.*

(1892, pp. 21-24) "The existence of dull uninteresting and backward schools is due in nine cases in ten to the district system and its accompanying inefficient supervision. That system should be abolished, and supervision should be so re-organized as to make it responsible and effective. Let there be made these two reforms, and the poor, small, backward, ill-taught schools will gradually but surely die. 2. *School length.*—The defects here—too short schools on the average, and too great inequality in length—are directly due to the practical operations of the district system. There is money enough expended annually, if wastes in expenditure be stopped, to give to all our schools an average annual length of thirty weeks. And those wastes would soon

stop after the abolition of this system. Moreover, with its abolition school funds would no longer be divided among the districts in such manner as to compel the inequality in length of schools now existing, but would stand as a common fund for the support of all for equal periods. 3. *As to teachers.*—The defects in this regard are also due chiefly to the district system, though in less degree to the faulty organization, lack of permanence, and consequent inefficiency of local supervision. With the system abolished, the necessity for employing the cheapest of teachers, and consequently inexperienced and untrained beginners, for the small and poor schools, would largely cease. The employment of teachers passing to those who are to direct their work, thus making them directly and solely responsible for the success of the schools, more rigid scrutiny into fitness could and would result, and successful teachers would be longer retained in the same school. And if with abolition of the district system should be coupled provisions making supervision more permanent, by putting the general management of the schools into the hands of a board which could not be entirely changed from year to year, the inevitable tendency and effect would be to employ the best teachers available for continuous service, thus weeding out the incompetent, reducing the number employed, and thereby adding in large measure to the efficiency of instruction. 4. *As regards appliances.*—Here, again, the district system is the direct cause of existing defects. The district is responsible for the furnishing of all apparatus and aids to the general instruction of the school, other than text-books. To provide for these it must either assess taxes or vote to use a portion of the school money apportioned to it. Both provisions are utterly impracticable in a large majority of districts, and hence the schools are without these aids, and suffer in efficiency thereby. With the system abolished, the town would become responsible for the furnishing of these things, and the town could do, and would be more likely to do, what the district cannot and will not do. 5. *As to number of schools.*—Here, again, also, in the district system will be found the origin of existing defects, and only in its abolition can a remedy for them be found. It must be made for the interest of a majority of the town to wipe out the too many small and needless schools, in order to secure their abolition. With the system abolished, it would be at once for everybody's advantage to save all unnecessary expenditures in order to increase the length and efficiency of the needed schools. Indeed, so much would this be the case, that, in any law abolishing the system, it will be necessary to provide safeguards for the protection of such small schools as from location are necessary. 6. *As to school-houses.*—To the district system must be attributed almost wholly the unsatisfactory condition of the many school-houses, especially in the rural districts. The conditions of wealth and population in these districts are such that often the expense of providing suitable houses would be so burdensome as to render their erection and maintenance practically impossible. With the system abolished, such expense would rest equally upon the whole town, and thus be comparatively easy to be borne. One of the most noticeable results of abolition in those of our towns which have abolished, is the improved condition of the school buildings. 7. *As to local management.*—Abolition of the district system would at once remove the cause of most of those defects in local school management which render that management irresponsible, and hence not efficient for the best results. Couple with abolition, provisions for the entire management of the schools by a permanent board or committee varying in number of members to allow all sections of small and large towns to be fairly represented; require that board to act directly upon the schools themselves through a responsible visitor or supervisor elected by the board, having certain specific duties to perform, and suitably paid for his services; let the board serve without pay, so that membership on it should not be sought for its profits, but be accepted as an honor, and because of deep interest in the well-being of the schools, and the local management of our school system would become fully responsible and vastly more efficient for good than now. And so constituted and efficient, it would quickly assume a vastly higher place in public estimation as an essential educational force. 8. *As to financial wastes and discriminations.*—On this head little needs to be said additional to that said under the corresponding head in the foregoing discussion of the defects of the system. To put the financial management of our schools on an economical, equitable and business-like basis, the district system, with its wastes, inequities and discriminations, must be succeeded by something without these defects, and the local management must be made responsible, permanent, and efficient."—Ibid.

(See, also, extracts from Reports of U. S. Commissioner of Education, 1872, '74, '76, '80, '83, '84, '85, '86, '88, '89, '90.)

MARYLAND.

(Twenty-seventh Report, p. 79.) "It follows that all the children of school age throughout the State are alike the proper beneficiaries. The question is not in what city or county does the child live, but does he live in the State. Every child must share alike in the provision made for public education, and is entitled to the same share of the State's money raised for this purpose. The underlying idea of any proper public school system is that the strong places shall help the weak. The State, to have good citizens, must educate its children. Our metropolitan city in this, as in every matter of common interest, must aid the less wealthy portions of the State, just as the cities and towns of the counties aid the rural sections. Equal benefit to each child is the only reason for the establishment of a State system. Take these great principles away and the State system is destroyed. Maintain them and the child of the suburb or of the wretched alley home is provided for exactly as that of the palace; the child of the county seat as the dweller in the mountain valley or on the island. Our public school system is against selfish, local interests, and in favor of equality of opportunity to every child of the State."—E. B. Prettyman, State Superintendent.

MASSACHUSETTS (1833-88).

IV. (1841, pp. 24-28.) A recommendation of union schools—Horace Mann, State Secretary.

V. (1842, pp. 29, 30.) "There is but one class of persons in the whole community, and that class not only small in number, but the least entitled to favor, who are beneficially interested in the establishment of small and feeble districts. This class consists of the very poorest teachers in the State, * * * who are willing to teach for the lowest compensation, and for whose services even the lowest is too high."—*Ibid.*

X. (1849, pp. 36-40.) "As a general fact, the schools in undistricted towns are greatly superior to those in districted towns; and for obvious reasons. * * * Three grand conditions of a prosperous school, viz., a good house, a good teacher, and vigilant superintendence, are secured by motives which do not operate, or operate to a very limited extent, in districted towns. * * * I consider the law of 1789, * * * authorizing towns to divide themselves into districts, the most unfortunate law on the subject of common schools ever enacted in this State."—*Ibid.*

XIV. (1851, p. 28.) Quoting this last statement of Horace Mann, the secretary says: "The justness of the above observation is illustrated every day by the evils which are forcing themselves upon the public attention from every quarter."—Barnas Sears, State Secretary.

XVI. (1853, pp. 24-51.) "If such a system [as the district] had not come down to us as one of established usage, no one conversant with the subject of education would for a moment think of recommending it at this day."—*Ibid.*

XVIII (1855, p. 55.) "Of the towns which have placed the appointment of teachers entirely in the hands of the superintending committee of a township, a very considerable number have proceeded still further, and dropped the former mode of dividing the schools according to districts, and placed the whole matter of their organization and distribution in the hands of the school committee. This change has already been made in about sixty towns in the Commonwealth; and the subject is now, more than ever before, engaging the attention of other towns, so that the year to come is likely to show greater results than any preceding year. *The perceptible improvement of the schools in those places which have made such a change, is an argument before which nothing can stand, and which is now acting upon the minds of the people at large with silent but resistless power.* The clear intelligence, steadiness and sobriety with which the people are beginning to pursue their object, as contrasted with the adventurous and uncertain efforts in the same direction in former years, is one of the many pleasing indications that the days of turmoil and confusion, in settling great questions of school policy, are passing away, and that a wise regard for the interests of posterity is becoming more and more controlling in the management of this branch of our public interests. It is hardly too much to say that, under the guidance of such lofty sentiments, all the towns of the State will, within a short period, be found

adopting that policy in the management of their public schools which experience shows to be best."—*Ibid.*

XX. (1857, p. 81).—Geo. S. Boutwell, Secretary State Board of Education.

XXI. (1858, pp. 49-56.) "In the sparsely-settled districts an anomalous public sentiment exists. The people are attached to the district system; the school committees are unwilling to assume the labor which its abolition requires, while the friends of education unite in condemning the evils of the system and the evils with which it is associated."—*Ibid.*

XXIII. (1860, p. 74.) "*I entered upon the duties of the office I now hold with some faith in the district system; my observation and experience have destroyed that faith entirely. It is a system admirably calculated to secure poor schools, incompetent teachers, consequent waste of public money, and yet neither committees, nor districts, nor towns be responsible therefor. It is unquestionably true that the best schools are found where the district system does not exist; and the charge, in a few instances made or suggested, that there has been no improvement for twenty-five years, is limited in its origin and in its truthful application to those towns which are divided into districts. Whenever a town has established the municipal system, and adhered to it for two years, there has never, within my knowledge, been a serious effort in favor of the restoration of the district system. These facts are so encouraging and so conclusive that they ought, without argument, to convince the most sceptical. The great object of the people is the establishment of good schools at the least cost, and they have no interest in the district system when it fails to secure these ends.*"—*Ibid.*

XXIV. (1861, p. 115.) "*I am so well convinced of the wisdom of abolishing the district system, that I confidently expect its gradual abandonment. This section is not to be construed so as to preclude a town from abolishing the system at any time.*"—*Ibid.*

XXVI. (1863, pp. 62-69.) "The district system is such a hindrance and clog."—Joseph White.

XXVII. (1864, pp. 49, 50.) "Thus, *by holding on to the system of small districts, the towns are still suffering from short schools, cheap and incompetent teachers and poor school-houses, consequences from which there is no exemption but by a change of system or by greatly increased taxation. I most respectfully, but earnestly, urge upon the friends of education and taxpayers in these towns, and in others similarly situated, a renewed and dispassionate consideration of this matter, so fundamental and vital. Notwithstanding the obstacles arising from an extended territory and a sparse population, I cannot but cherish the belief that such a consideration would finally result in a considerable reduction of the number and in an increase of the length of the schools, vastly better school-houses, more competent teachers, without any serious addition to the burden of taxation.*"—B. G. Northup, Secretary of State Board.

XXIX. (1866, pp. 84, 85.) "It is no part of my present purpose to refer to, much less to recapitulate, the objections to the district system which have been urged with great force and earnestness by my distinguished predecessors in office."—Joseph White, Secretary of State Board.

(1866, Report of State Board of Education.) "Some observations on the means of improving and extending our system of public schools will conclude what the board have to present at this time. In the fourth section of the thirty-ninth chapter of the General Statutes, it is made the duty of every town divided into districts to vote at the next annual town meeting, namely, in 1866, upon the question of abolishing such districts. It is earnestly hoped that when this vote comes to be taken it will result in the total abolition of this cumbersome and unwieldy district system, *which has so long clogged the progress of educational improvement in the towns where it has been suffered to remain. Reason and fact alike condemn it as a fruitful source of inconvenience and evils. It perpetuates poor school-houses, inefficient teachers and neighborhood feuds and jealousies. It prevents the equalization of school advantages and stands in the way of a proper classification of pupils. As compared with the town system it is at once expensive and inefficient.*"

XXXI. (1868, p. 69.) "In many of the towns, especially where the district system still exists, there is a sad waste of money, time and privileges."—Abner J. Phipps, State Agent.

XXXII. (1869, p. 29.) "Believing that most of the evils from which their towns are suffering in respect to their public schools are more or less directly connected with their so-called district system, and that no decided progress can be expected so

long as this continues, they have not hesitated, in numerous instances, to express the hope that if the towns refuse voluntarily to abolish a system so fraught with evil it may very soon be abolished by legislative enactment. And I would respectfully suggest whether the time has not arrived for this board to recommend to the Legislature the early consideration of this subject with reference to such a result."—Ibid.

XXXIII. (1870, p. 112.) "Although directly affecting probably less than one-third part of the population of the State, yet it is not too much to say that this legislative adoption of township system is unequaled in importance by any on the subject to which it relates for a long period of years. For thirty years at least the leading writers and speakers had regarded the so-called district system as an unfortunate interpolation into the public school system of the State, and had earnestly pleaded for its eradication. *Every secretary, every agent, and, so far as I am informed, every member of the board of education, whatever might have been their views before entering upon their special work, speedily became convinced that the district system was an obstacle in the pathway of improvement, and strongly advocated its removal.* Gradually, but surely, the opinions thus formed and expressed gained possession of the public till an overwhelming majority of the people had voluntarily abolished the district system, and very few remained to advocate its continuance. Through that dislike of change and love of that which has come down from the past, by which the people of our Commonwealth, more strongly, perhaps, than those of any other State, show their English descent, and also through some vague apprehension that there would come with change some loss of privileges, a considerable number of towns adhered to the system, turned a deaf ear to the reasons which had led to its overthrow to so large an extent, and even refusing to be taught by the successful experiments of those who had adopted better modes of organization. * * * Thus, by one wise and most beneficent act was removed from our school system that which had long been regarded by the great body of intelligent observers and laborers in the work of education as more than all things else standing in the pathway of progress. It was, indeed, a stumbling-block and an offense. Being happily removed, the way is opened for the people of the towns where it existed to enter upon a judicious course of action for the improvement of their schools and the better education of their children, with the assurance of the success which has attended the efforts of those towns which had voluntarily abolished the district system"—Joseph White, Secretary of State Board.

XXXIV. (1871, p. 81.) "I will only add that from a careful observation for many years of the practical results of the district system, *I fully indorse the sentiment that it is a very great impediment to progress in the schools.*"—Abner J. Phipps, State Agent.

XXXVI. (1873, pp 113-116.) Shows the favorable effect of the township system on school-houses.—Ibid.

XXXVII. (1874, p. 87.) "One obstacle to the highest success of the schools is the large number of small schools to be supported out of a limited appropriation, a result, in great measure, directly or indirectly attributable to the district system."—George A. Walton, Special Agent.

XXXVIII. (1875, p. 80.) "Another sign of progress, and a very helpful one, is the relaxing of the hold upon the district system * * * It would now be easy, I think, to obtain the signatures of the most influential citizens in nearly all the towns at present under this system for its immediate abolition. The school committees will be a unit in this direction."—Ibid.

XXXIX. (1876, pp. 98, 99.) "Many of these evils are greatly exaggerated by the operation of the district system, under which a considerable number of the schools in the western section of the State are still laboring. * * * With little or nothing of consideration in its favor, with a troop of evils attendant upon it, with many peculiarly incident to its existence it would seem that it should be abolished at once and forever by legislative enactment."—Ibid.

(Pp. 105-112.) "The abolishment of the 'district system' is the principal cause of this great improvement in school-buildings. Since the abolishment of the 'district system,' under which the annual change of 'prudential committees' who used to employ teachers, and who often sought an election so as to put their daughters or other near relatives in charge of the schools, frequently displacing the best of teachers to make room for inexperienced and incompetent ones, this evil has been lessened"—Abner J. Phipps, State Agent.

XL. (1877, pp. 95, 96.) Gives statistics as to the towns that have restored the district system under the law of 1870. "I am fully aware how intensely our people, like their English ancestors, reverence and cling to the past because it is the past; yet I cannot relinquish the conviction that a candid and business-like examination of the district system in the towns where it still prevails, with especial reference to its two qualities of expensiveness and inefficiency, would result in a speedy and final abandonment of it."—Joseph White, State Secretary.

(1877, p. 58.) "But I count the district system, which still retains a hold upon many of the towns in this part of the State, to be the greatest hindrance to a uniform advancement of the schools. With no valid argument in its favor, the fruitful source of evil, and liable to that continually, it illustrates the almost sacred regard the people have for the opinions and interests of individuals. But for this, no authority for such a system could remain upon the statute-book a single year. Not all towns without the system uniformly have good schools or schools equally good; nor have all with it uniformly or equally poor ones. But the contrasts in the schools are most marked where this system prevails."—George A. Walton, Agent of State Board of Education.

XLIII. (1880, pp. 64, 65.) "When the towns were first divided into districts, it was not intended to grant to them any powers, or impose upon them any duties; the division was made simply to facilitate the attendance upon the schools."—J. W. Dickinson, State Secretary.

XLIV. (1881, pp. 91-95.) "It would therefore seem wise and necessary that what remains of the old school district system should be at once and forever abolished.—Ibid.

L. (1887, pp. 114-116.) "Thus finally disappeared from the statutes of the Commonwealth all provisions concerning a district system of school administration, *which every secretary and agent of the board had found to be the greatest obstacle to any intelligent progress in the schools.*"—Ibid.

(See, also, extracts from Report of U. S. Commissioner of Education.)

MICHIGAN (1851-93).

(1852, p. 410.) "Almost all the existing evils of the common-school system have their origin in the limited means of the school district."—Francis W. Shearman, State Superintendent.

(1853, p. 149.) "For several years the city [Detroit] was divided by the board into small school districts, each school having its arbitrary limits over which no scholar was allowed to pass to any other school. This system occasioned considerable dissatisfaction, and it has been abandoned in practice."—Levi Bishop, President of Detroit Board of Education.

(1862, pp. 6, 7.) "In 1861 a bill was introduced into the Legislature of this State authorizing the establishment of the township system in such townships as might desire it. The bill met with considerable favor, but for want of time to perfect it, it was left among the unfinished business of the session."—J. M. Gregory, State Superintendent.

(1863, p. 77.) "What we need is the abolishment of the separate district system, and the establishment of the township system of school organization and government. * * * Free schools are founded upon the principle that it is the duty of the State to see that children within its limits are educated. To this end a generous public fund is provided, and the people are yearly taxed to support the system, yet the kind and amount of instruction given to the children of different districts depend entirely upon influences which the law does not seek to guide or control. Now, common sense and justice demand that wherever children enough to organize a school are found, one should be established, with all the means and appliances necessary to secure the result desired—the proper education of the children attending it.

"*Employment of teachers.*—It being the special duty of the secretary of the town board to visit the schools, become acquainted with their conditions and wants, the capacity, tact and success of the different teachers, he would be better qualified to select the person suited to each school than nine-tenths of the district clerks under the present system possibly can be; thus better teachers would be employed—that is, teachers better adapted to their positions—and they would not be changed each term,

as they now are, but would remain in one school as long as they were successful in their work. Incompetent and unsuccessful teachers would be sifted out, the standard of attainments of all those would be gradually and surely raised, and the consequent progress of the schools would be certain and uninterrupted."—J. L. Pickard, State Superintendent.

(1864, p. 8.) "He must be indeed a timid man who would fear to venture in the experiment of this change after its marked and triumphant success in Massachusetts, Pennsylvania and half a dozen other States; and he is a very prejudiced man who can doubt or deny its superiority after the testimony and arguments of such men as Horace Mann, George Boutwell and the other eminent school officers and educators who have given it their cordial approbation."—*Ibid.*

(1868, pp. 8, 9.) "The policy of dividing the townships of the State into these small districts should at once cease."—Oramel Hosford, State Superintendent.

(1870, pp. 32, 33.) "There is a limit to the division of territory into districts, beyond which it is not profitable to go, although it is convenient."—*Ibid.*

(1870, pp. 11, 12.) "Nothing has attracted the attention of other States to the educational system of Michigan more than the large number of union or graded schools. * * * It is believed that the system, in a somewhat modified form, may be introduced with great benefit to the more thickly-settled farming districts by forming the schools of a township into one, under the direction of one board of officers."—*Ibid.*

(1873, p. 5-9.) "The fact that the township is the smallest unit in the civil system makes it desirable, for the sake of uniformity alone, that it should correspond with the smallest unit of the educational system."—Daniel B. Briggs, State Superintendent.

(1875, pp. lxxx-lxxxiv.) Speaks of the substitution of town for county superintendents, by the act of 1875.—*Ibid.*

(1877, pp. xxiii-xxvii.) Discusses the results of the above change.—H. S. Tarbell, State Superintendent.

(1880, pp. 19-24.) "The second means for securing better management of rural school affairs is a reduction of the number of school officers. This must be had through a reduction of the number of districts *by the union of the several districts of a township into one*. The township is the corner-stone of American freedom. A recent writer has gone so far as to say that no American State can maintain free and equal institutions for any length of time without the township and the town meeting. The township is the unit in our political system, and should be no less the unit in the educational work of the State."—Cornelius A. Gower, State Superintendent.

(1883, pp. vi-x.) There is no question connected with our public school system that demands more thoughtful consideration than the subject of township organization. The defects of our present system of separate, independent school districts, and the advantages to be derived from the township system, have frequently been set forth in the reports from this department. Several of my predecessors in office have ably discussed this subject, and have advised the enactment of such laws as would do away with the independent existence of several thousand districts, and would lead to the adoption of the township as the unit for organization and management of schools. Following are some of the benefits that would be derived from such legislation: 1. The organization of districts would be simplified and more easily accomplished. 2. The erection of better and more commodious school-houses. 3. Classifying and grading would be facilitated. 4. Better teachers would be more permanently employed. 5. The burden of taxation would be equalized among larger communities. 6. The public school funds would be more equitably distributed. 7. Equal educational privileges would be extended to all parts of the township. 8. Children could attend the school that was most convenient. 9. School-houses would be furnished with better means of instruction. 10. The aggregate cost of education would be diminished. 11. Fewer difficulties would arise in regard to district boundaries, which would be more permanently fixed. 12. Nepotism in the selection of teachers would not exist so extensively as it does now. 13. School-house sites would be better and more conveniently located. 14. The number of school officers and elections would be largely reduced. 15. Less difficulty would be experienced in securing reliable statistics and information in regard to school work. 16. Schools would not so frequently fail to receive their portion of the public-school funds. 17. There would

be better management and supervision of the schools. 18. Text-books could not be so easily changed. 19. The school laws would be simplified, and better understood and obeyed."—Herschel R. Gass, State Superintendent.

(1884, p. xiv.) "Experience has demonstrated the inefficiency of the present district system, and to-day the sentiment of educators of the country is almost universally favorable to the township system"—Ibid.

(1886, pp. v.-viii.) "Experience of other States has proved the superiority of the township system, and the testimony of the Superintendents of Public Instruction of Massachusetts, Illinois, Iowa, Indiana, Ohio, New Hampshire and Pennsylvania, where the civil township is made the school district, is unanimous in its favor."—Theodore Nelson, State Superintendent.

(1887, pp. xv.-xix.) "Another effort was made at the last session of the Legislature to secure the passage of an act providing for the establishment of township school districts."—Joseph Estabrook, State Superintendent.

(1888, pp. ii.-ix.) "My faith in the loyalty of the people of Michigan to the principle of free schools assures me that they will heartily approve of any measure that they are convinced will most nearly approximate absolute equality and justice in the matter of popular education. With this assurance, I am again impelled to urge upon the Legislature an amendment to the school law providing for the township school district. * * * I am firmly convinced that *this action—adoption of township system—on the part of the Legislature will ultimately result in more and greater benefits to our rural ungraded schools than any legislation affecting public education that has been adopted since the organization of our school system, excepting, possibly, the abolition of the rate-bill.*"—Ibid

(1891, p. x.) "Friends of the township district system have noted with pleasure the occasional local acts that have organized individual townships as single districts. The longest step in advance was taken in Act No. 176, which is an act for the organization of township school districts in the Upper Peninsula."—Ferris S. Fitch, State Superintendent.

(1893, p. xviii.) "The experience of the year in visiting all portions of the State and endeavoring to interest school officers in school questions; the scores and scores of petty district quarrels in which the superintendent has been asked to take a hand; the inequalities in educational advantages endured by pupils in different districts, have all tended to strengthen our belief in the township district."—H. R. Pattengill, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1873, '86, '87, '88.)

MINNESOTA (1883-90).

(1883-84, pp 22, 23.) "The remedy is to be found in the system in which the township is made the unit. That a large number of States have adopted it successfully or made it optional with districts to change it, commends it to our attention as a sufficient remedy."—D. L. Kiehle, State Superintendent.

(1886, pp. 19, 20.) "The defects of our common-school system, comprehensively stated, are a lack of thorough organization, by which the influence and intelligence of the whole are brought to bear upon each part, by which the wise may direct the ignorant, the rich help the poor and the energetic and progressive urge forward the more sluggish. Noticing the defects of our system more in detail, I call attention to the common-school district. This may be known as the neighborhood plan, in which as many families as can conveniently send to one school have their own officers and school-house, and tax their property for the education of their children. This plan prevails nowhere but in the country, although it is not a whit better adapted to it than to cities. The unwisdom of this plan would be fairly illustrated if our cities should adopt it, and provide by law that every one, two or more blocks might organize for the support and control of their school affairs by a separate set of officers. If the two cities of St. Paul and Minneapolis should adopt the plan of the country they would support over 500 districts and over 1,500 school officers; there would be some very rich districts, with excellent schools supported at trifling cost, and there would be other very poor districts, with a few children, poor schools and short terms, maintained at a burdensome expense. And this is the precise condition

of things in the country. Some districts are large, rich and thriving; others are poor, sparsely settled, have few children and can hardly support a four months' school by levying the highest tax allowed by law. There is no more reason for having a set of officers for each school in the country than there is for making as many separate districts in a city as there are school-buildings. The same rule should govern in the country that governs in cities. As the territory of the municipality is the territory of the school district, so the township should be the school district in the country; and as in the city a single board provides school privileges as they are needed, so in the township, under one board, school-houses should be located, the teachers employed and all conveniences provided as the distribution of population and the progress of the children require."—*Ibid.*

(1890, p. 15.) "As to the importance of a better district organization and the abandonment of the present neighborhood system, I have in a previous report given what seems to me to be abundant proof that the township system would fully meet these demands." (Page 20, Report of 1885-'86.)—*Ibid.*

(See, also, extracts from Report of U. S. Commissioner of Education, 1874, '76, '78, '87, '88.)

MISSISSIPPI (1882-83).

(See extracts from Report of U. S. Commissioner of Education, 1870, '76, '86.)

MISSOURI (1869-92).

(1869, pp. 24-57.) Gives a historical sketch of public education in the State. By the law of 1836, "every school district was organized by a vote of the inhabitants, upon the order of the township directors."—T. A. Parker, State Superintendent.

(1875, pp. 8, 9.) "Difficulties arising from partial district and partial township organizations are pointed out."—R. D. Shannon, State Superintendent.

(1876, pp. 7, 8.) "Similar complaints are made."—*Ibid.*

(1891, p. 9.) "It is, therefore, hoped that the day will come when Missouri will abandon her district school organization and substitute therefor township organization. Each school township would be composed of about nine ordinary school districts, and should be under the management of one board, with a common rate of taxation and a common fund. Pupils should be assigned to the school-houses most accessible. In each school township there should be a central school-house, where, in addition to the common branches, some of the higher branches would be taught by a second teacher. In the seven or eight school-houses immediately surrounding this school-house, nothing but the common branches should be taught, the pupils being promoted to the higher department of the central school upon graduation in the common branches. These school townships should not be municipal or congressional townships, but school townships for school purposes only, and formed around the towns and villages as far as possible. The great objection to this reform would be the assumption of school debts, but a satisfactory adjustment of district liabilities is not at all impossible. I trust, therefore, that with county supervision, or soon after, will come school township organization."—L. E. Wolfe, State Superintendent.

(1892, pp. 14, 15.) "*School Township Organization.*—By this I mean the State divided into school townships, each composed of about nine ordinary schools, as far as possible formed around towns and villages as centers; the eight tributary districts teaching a common-school course of study only, the central district teaching, in addition to a common-school course of study, a secondary course of study, of from one to four years, depending upon the size of the town; each school township to have one board of education and a common rate of taxation. No forlorn letters telling of distant school-houses and swollen streams, for each pupil would be assigned to the school most accessible. Thus relieving the teachers of the tributary districts from the necessity of teaching the higher branches would insure thorough instruction in the common branches. The central school would give an opportunity to pursue the higher branches within a few miles of home. Graduates of these tributary schools could board at home, and ride three, four or five miles to the central school."—*Ibid.*

(1893, pp. 37, 38.)—*Ibid.*

(See, also, extracts from Report of U. S. Commissioner of Education, 1874.)

NEBRASKA (1874, '80, '82, '84).

(1882, pp. 12, 13.) "The number of districts has steadily increased, and it is believed that the growth has been legitimate. * * * On the other hand, there are strips of territory, notably along the Platte river, that are isolated by that stream so that the pupils resident upon them cannot ordinarily attend school. I recommend that power be given the superintendents in such exceptional cases, to form districts less than six sections in size."—W. W. Jones, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1873, '76, '78.)

NEVADA (1875, '76, '83-86).

(1883, '84, pp. 66, 67.) "In Nevada there is an aristocracy of school districts, as in England there is an aristocracy of families. Some of the children eat at the educational feast of plenty; others are not allowed to pick up the crumbs that fall from the table. The whole people provide for the care of the insane, the prison convicts, the deaf and dumb, the blind and orphans. Why should they not provide for the sane, moral children, the hope of our Commonwealth? * * * Is there any rational explanation of the fact that while Storey county has an average of ten months of school, White Pine has an average of four and one-half months? And yet we are told that our schools are free!"—C. S. Young, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1886.)

NEW HAMPSHIRE (1874-'90).

(1874, pp. 118-121, 144-149.) "The act enabling towns to abolish school districts in certain cases, passed June session, 1870, if adopted or made compulsory, is designed to remove many of the defects that now impede progress." Quotation is made from a speech by Moses B. Goodwin, Esq., as follows: "For more than two hundred years after New Hampshire was settled, the subdivision of the territory of the town for school purposes was unknown. The location of the school depended upon the location of the population and not on territorial lines. The whole conduct of the school was reposed in a single board of town officers. The system grew out of the practical wants of the people. Its fruits were good, and the interests of the schools never called for any change. The inhabitants were, in the earliest years of the town, accommodated by a teacher, who went from one section of the population to another, holding the school where the scholars were mainly located, the larger scholars often following the teacher, as he opened his term of school, from place to place. When the population authorized the employment of more than one teacher, it was divided, for convenience, into classes, and this continued until 1805, when an act was passed that 'empowered' the towns 'to divide into school districts.' It was repealed in the act of 1818, embraced in the great law of 1827, and introduced into subsequent acts, till, in 1839, the empowering clause was replaced in the amendatory act of that year by a provision peremptorily ordering the division. This act, however, failed to bring all the towns into the district system; and in 1843 an act was passed requiring the selectmen, under penalty of \$100, on application of ten legal voters, in case the town neglected to do so, to make the division. Thus was accomplished a work not fit to be done."—J. W. Simonds, State Superintendent.

(1875, pp. 282, 283.) "The popular prejudice against this law, which is usually very strong among our people living in the sparsely-settled districts of the State, is grounded upon the notion that it would take a certain amount of power from voters of those districts and centralize it somewhere. That fallacy consists in the supposition that any man has more real power or influence for voting or acting in a school district composed of the voters of one district than he could have in a school meeting composed of all the voters in the town."—Ibid.

(1877, pp. 162, 164.) "The superintendent is fully convinced, after a careful survey and consideration of both sides of the question, that a consolidation of the districts of the State is both practicable and necessary."—Charles A. Downes, State Superintendent.

(1883, pp. 270-275.) Gives a paper on the subject by Walter A. Robinson, principal of Franklin High School, with results of the adoption of the township system in that town.—J. W. Patterson, State Superintendent.

(1884, pp. 244, 245.) "Since my last report, several towns have voluntarily adopted this system, and, so far as I know, are pleased with the change."—*Ibid.*

(1886, pp. 266-276.) "That the right to regulate and control our system of public instruction falls within the legislative power of the State no intelligent man will question, and hence no legitimate modification of it is or can be infringement of private rights, however it may run counter to personal interests and prejudices. The public welfare, not individual feeling, determines such matters. Nevertheless, our public schools originated in these towns, and for more than one hundred and fifty years were managed and controlled by the selectmen as town schools. * * * The law makes the town, as at the first, the political unit of the State, and is in the interest of equality and fair play."—*Ibid.*

(1887, pp. 312-316.) "The new school law [township] has run the gauntlet of misrepresentation and abuse for a year, and has come forth stronger in itself and in the number of its friends than when it entered upon its course. No law ever encountered, at the outset, bitterer or more groundless prejudices than this, and none ever disarmed opposition more quickly and demonstrated its power to benefit the State."—*Ibid.*

(1888, pp. 288, 289.) "The law is on trial, and if the town will elect good men on the school boards and give the system a fair chance, its friends will gladly abide the result. Thus far its success has outrun their anticipation."—*Ibid.*

(1890, pp. 270-273.) "But the most unexpected revelation of these statistics is the great increase in the amount of schooling which the town system has given to the State without any additional taxation."—*Ibid.*

(See, also, Report of U. S. Commissioner of Education, 1871, '72, '73, '74, '76, '78, '81, '84, '85, '86, '87, '88, '89.)

NEW JERSEY (1869-94).

(1869, p. 24.) "The change which I wish to present for consideration and which I think would be productive of great good if effected, is the substitution of what is called the township system of organization for our present district system. In this change all independent local districts and district boundaries would be abolished, each township would be constituted a school district, and one board of trustees or directors, selected from different parts of the township, would be chosen to administer the school affairs of the whole township."—Ellis A. Apgar, State Superintendent.

(1870, p. 30.) "Free schools may be secured by substituting for our district system the township system of school organization."—*Ibid.*

(1873, pp. 25-29.) "This change [to the township system] would, in my judgment, strengthen our system still more and add greatly to its efficiency. * * * For all other purposes in our political organizations, the township is the unit, and there appears to be no good reason why it should not be the unit for educational purposes also."—*Ibid.*

(1874, p. 11.) "I know of no plan whereby these difficulties may be avoided and the objections overcome, except by the adoption of the township system. In the division of territory the township should be the ultimate unit in school matters as it is in all others. The township is a thoroughly-organized corporate body."—*Ibid.*

(1892, p. 42.) State Superintendent Poland urges herein the abolition of the district school system and the substitution of the township system therefor.

(1893, pp. 24-29.) In his report for this year State Superintendent Poland again urges strongly the adoption of the township school system.

(See, also, extracts from Report of U. S. Commissioner of Education, 1873.)

NEW YORK (1827, '36-41, '45, '49-51, '53-56, '58-63, '65-88, '92).

(1891, p. xxii.) *Points in favor of the township system.*—The following, which may be said to sum up and epitomize the advantages of the township system of schools, was submitted at a meeting of the New York Association of School Commissioners and Superintendents (Batavia, January 14th, 1891): "1. The affairs of all school

districts would be managed with business system, an advantage which now attaches to union free school districts, where a school board has charge of the district, holding regular meetings and having an oversight over school interests. 2. Equalization of school taxes in towns. The inequality now prevalent would be removed, where one district pays \$10 to \$20 per capita for school privileges—no better than given in an adjoining district for \$5 per capita. 3. A more efficient, intelligent, and progressive class of school officers. Parsimony and extravagance would alike be controlled. As a rule, boards of education are composed of the leading men of the community. 4. All the inhabitants of a town would receive equal educational advantages at equal rates. 5. It would guarantee to all communities the school privileges now enjoyed by residents of union free school districts. 6. Fewer and larger schools, better wages, better teachers. Weak districts would be annexed to others. 7. More and better supervision by school commissioners and boards of directors. 8. It would add dignity and usefulness to the office of school commissioner, giving him less anxiety over petty details, and enabling him to supervise schools more systematically and intelligently. 9. Better facilities for grading the country schools, and establishing a uniform and satisfactory course of study, having in view the entire school population of a town. Advanced or high schools could be established at convenient points, which every pupil of the town of requisite educational advancement would have the right to attend. The small schools would become a part of a perfected, harmonious, and efficient system, instead of straggling and struggling nonentities. 10. Cheaper and better schools, lower taxes, longer terms for less money. The Michigan report for 1888, p. 6, refers to a town organized under the township system, where the average length of term was nine months, at an expense of \$13.71 per capita, in comparison with a town retaining the district system, where the average length of term was four and a half months, at an expense of \$14.80 per capita. 11. Uniformity of text-books would certainly be secured in every town. This would be very likely to extend to all the towns composing a commissioner district or a county. 12. A more systematic and satisfactory method of making reports would be possible, guaranteeing more reliable school statistics, thus closing the avenues now open in a hundred ways for imperfect and unreliable data. 13. Greater dignity would attach to public education in the common schools of the State; public opinion would have greater respect for it, and public pride would be aroused. 14. All troubles now encountered by trustees in making out or correcting tax lists would be abolished; the efforts of the collector to elude the taxpayer when fees are 1 per cent, and the hunt of the collector for the taxpayer when fees are 5 per cent., would entirely disappear. 15. The question of district boundaries would no longer vex school commissioners or take their time. The matter would be entirely under the control of the school directors. 16. Cheaper text-books would be possible. They could be purchased for all the schools of a town at greatly reduced rates. This would solve the vexed question of State publication of text-books by allowing each town to purchase its own books where they could be obtained to the best advantage. 17. The present law in reference to compulsory education would be more generally and more easily enforced. 18. It is the only system which will save the small country districts from extinction. 19. More permanency in the teaching force of the State, a firm step toward making the teachers' profession permanent. 20. As a result of the last point, a better and higher grade of teachers. 21. Better facilities for instruction would be afforded in the way of apparatus, books of reference, &c., and more intelligent action would be taken in reference to the equipment, maintenance, and preservation of school district libraries. 22. A general uplifting of educational sentiment throughout the State. With the township system, an enforceable compulsory education law, and provision for the professional training of teachers, our educational system would be placed twenty-five years in advance at one bound."

(See extracts from Report of U. S. Commissioner of Education, 1876, '78, '79, '88, '89.)

NORTH CAROLINA (1883, '84, '92).

(1891, '92, pp. xiii., xiv.) "Among the amendments suggested by the county superintendents are the following: * * * Have township committees instead of district committees."—S. M. Finger, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1873, '74, '83.)

OHIO (1858, '59, '69-81, '84-87, '93).

(1869, pp. 5, 6.) "It is believed that the present mongrel system should give place to the purely township system. * * * The experience of other States in which the purely township system has been tried demonstrates its superiority to the district system."—W. D. Henkle, State Commissioner.

(1871, pp. 53-55.) "The act of March 14th, 1853, provides that 'each and every organized township in the State shall compose but one school district for all purposes connected with the general interests of education in the township, and shall be confided to the management and control of a board of education; and the several school districts, or fractional parts thereof, which now are or may hereafter be established in the several organized townships of the State shall be regarded as sub-districts, and be confided to the management and control of sub-directors.' By the provisions of this act township boards are bodies politic and corporate in law, and are invested with the title, care and custody of all school property belonging to the school district or township. They have exclusive control over the central or high schools of their respective townships; prescribe rules for all the sub-district schools; may appoint one of their members manager of the schools in the township in which he resides and allow him a reasonable salary for his services; and by the act of March 31st, 1871, are authorized and required to determine the text-books to be used and the studies to be pursued in the schools under their control; they fix the boundaries of the sub-districts and locate school-house sites. They make estimates of the amount of money required to build and repair school-houses, pay contingent expenses, &c., and to continue the schools in session six months each year. They apportion school moneys of all kinds among the sub-districts, and are required to make an annual report of certain specified particulars to the county auditor. Local directors control and direct the educational interests and affairs of the sub-district. They take the enumeration of children of school age; employ and dismiss teachers; make contracts for building, repairing or furnishing school-houses, for providing fuel, for purchasing school-house sites or renting school-rooms, and make all necessary provisions for the convenience and prosperity of the sub-district schools. Practically the management of our county schools and the disbursement of all school moneys for their support are entrusted to them. * * * Need we be surprised that a system so cumbersome and complicated is found to be a fruitful source of neglect, perplexity, misunderstanding and litigation?"—Thos. W. Harvey, State Commissioner.

(1872, pp. 43, 44.) "It was best, perhaps, when the population of the State was sparsely distributed and less homogeneous that it was in 1853, to entrust the management and control of local school interests and affairs to sub-district boards of education, or local directors. Experience, however, had demonstrated the evils of that system, and pointed out a way by which they might be avoided. It is to be regretted that all the lessons of experience were not heeded, and that, in the Code of 1853, duties and responsibilities which ought not to be separated, were divided between local directors and township boards; for the practical working of this compromise system is far different from what its authors anticipated. There is, in reality, no good reason why the conduct of school affairs in country and village districts should essentially differ. A radical change in the organization of township boards, inviting the abandonment of sub-district boundaries, is therefore advocated by the most thoughtful observers of the operations of our school system."—Ibid.

(1874, pp. 45, 46.) "Those best acquainted with these schools have little hope of their improving to any great extent, so long as the sub-district system is continued."—Ibid.

(1875, pp. 11-17.) "Is there any remedy? A very simple one; abandon the sub-district system and all special school districts."—Charles S. Smart, State Commissioner.

(1876, p. 8.) "I have said, and I repeat, that an adoption of the township system and more careful and intelligent districting and location of school-houses and fixing of school limits, would save to the State half a million of dollars."—Ibid.

(1878, pp. 49, 54.) "The remedy for these evils is potent: To place the schools of a township under control of a board of education, elected by the people of the township, for the special work, with the same powers and duties as the board of education."

in a village. The time was when there were two or more schools in the same city or village. Does any city or village wish to lose the advantages gained when that state of things was brought to an end by a wise bit of legislation?"—J. J. Burns, State Commissioner.

(1881, pp. 34-43.) "A few townships in Ohio, notably the township of New London, in Huron county, have considered these advantages, and they report and they exhibit to the observer advantages approximating to those of the city schools in this respect. They have so arranged the schools of their township that they employ the same teachers during the whole period of nine months, * * * have gradually provided some schools for the higher classes, * * * but * * * the better schools were kept up thirty-five weeks in the year for the same money as had been required to run them twenty-eight weeks."—D. F. De Wolf, State Commissioner.

(1893, pp. 9-12.) "This law which has caused so much discussion [township] and which was referred to at length in my report for 1892, did not go into effect until April 1st, 1893. There has not been sufficient time since that date to determine definitely what the results of its enforcement may be on the schools which come under its control. The friends of the measure have insisted that it should have a fair trial, claiming that it would bring about a more effective organization of the schools, in the adoption of courses of study, election of superintendents, and establishment of high schools; and that the additional responsibility placed upon the directors would have a tendency to place better men upon the board of education; also, that the tendency of the law would be to increase the length of time for which teachers are elected, and decrease the number of changes of teachers, thereby removing from the schools the greatest hindrances to their progress."—O. T. Corson, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1870, '72, '73, '78, '81, '83, '85.)

PENNSYLVANIA (1840, '42-44, '46-49, '51-85).

(1844, p. 11.) "By the act of 1836 the boundaries of the school district are the same with those of the township, borough or ward. There cannot be a more convenient arrangement. In all that relates to school elections, the assessment and collection of taxes, the return of taxables and the auditing of school accounts, it affords incomparable advantages over any other that could be made. This arrangement, however, is in danger of being disturbed by the practice on the part of the Legislature of dividing a township into two or more school districts."—Charles McClure, State Superintendent.

(1853, pp. 3-6.) "Provisions I most respectfully recommend. * * * Seventh. To abolish sub-districts, or, if retained, to amend the details of the present provisions relating thereto."—F. W. Hughes, State Superintendent.

(1856, p. 11.) "The large districts of the Pennsylvania system are one of its wisest arrangements. The existence of single school districts, each with its separate and independent board of officers, is found not only to clog the operations of the system with an unnecessary complication of machinery, but to stand in the way of that grading of the schools which is so essential to their perfection. That ours is the only proper arrangement in this respect is demonstrated by the fact that all improvements in common-school legislation, based on experience, are designed to effect the same object, whether it be by the consolidation of districts, establishment of higher schools by the joint action of two or more small districts, or their incorporation in the foundation of union schools."—A. G. Curtin, State Superintendent.

(1857, p. 27.) "Independent districts. These districts are an anomaly in the system, and the general intentment of the school law is against them."—Henry C. Hickok, State Superintendent.

(1858, p. 19.) "In former years, under the operation of the sub-district system and the pressure of individual interests and influence, more schools were established in many of the rural districts than the population and territory required. This evil has been a formidable barrier in the way of progress, and has caused heavy taxation without corresponding benefit."—Ibid.

(1861, p. 17.) "The location of the school-house, the course of studies, the choice

of teachers, the length of the term and all the chief powers of the system are [under the township system] in the hands of directors chosen by and responsible to the parents of those to be educated. Not a single power of the system has been unnecessarily withdrawn from this safe course, or withdrawn any further than is indispensable to its existence as a public agency."—Thomas H. Burrowes, State Superintendent.

(1867, pp. xxviii.—xxxvi.) Gives a sketch of educational legislation in the State.—J. P. Wickersham, State Superintendent.

(1869, pp. xiv.—xvi.) Discusses the system of township directors, arguing against change of number or payment for services.—Ibid.

(1871, p. xx.) "Each township, borough and city in this State is made by law a school district. The districts thus formed are the only ones except a small number of what are called 'independent districts,' with a single school, formed out of part of adjacent townships otherwise badly accommodated with schools. Outside of counties and boroughs, the school districts have from one to thirty schools, the average number being about seven. The power of levying and collecting taxes, building and furnishing school-houses, employing and paying teachers, selecting text-books and managing the schools generally, is vested in a board of six directors, two of whom are elected annually at the regular local election. * * * The directors of a district are authorized by law to appoint and pay a district superintendent. * * * The school directors of each county, and of each city and borough having over 7,000 inhabitants, as may choose to do so, meet in convention triennially, at the call of the State Superintendent, to elect a [county] superintendent and to fix his salary."—Ibid.

(1876, p. xliii.) From the lessons of the Centennial Exposition, the superintendent draws conclusions: "1. That the policy of placing so much power in the hands of local school boards, as is done by our laws, has its weak as well as its strong points. * * * 2. That the State should lose no time in adopting some plan of aiding the district school boards in erecting and furnishing school-houses."—Ibid.

(1877, pp. vi., vii.) Treats of school organization in cities, and recommends the election of a single school board, elected by the people on a general ticket, without respect to wards.—Ibid.

(1878, pp. xvi., xvii.) Advocates the union of small townships in the employment of a qualified superintendent.—Ibid.

(1880, pp. xii., xiii.) "One source of weakness in the system is that school boards are required to perform duties of which they many times have inadequate knowledge. They are generally men of intelligence and possess good business qualities, but many of the duties which the law imposes on them as school directors cannot be well performed without a kind of special knowledge and skill that they do not possess. To learn how to build and furnish a school-house, with due regard to the work of a school and the health of the children, requires the study of years. How can men who know nothing of the art of teaching, certainly as difficult as the art of making a watch or a steam engine, wisely select text-books, arrange courses of study, grade schools or examine classes? Who is qualified to direct a teacher's work but a teacher? Our school system is weak, therefore, in placing in the hands of school boards duties that properly belong only to experts."—Ibid.

(1881, p. iv.) Continues the same discussion, and recommends that some of the powers of directors be transferred to the county superintendent.—E. E. Higbee, State Superintendent.

(See, also, extracts from Reports of U. S. Commissioner of Education, 1878-81.)

RHODE ISLAND (1845, '48, '68, '69, '71-87, '93).

(1845, pp. 18, 28, 62, 125-131.) "In the four instances where the schools are administered by the town in its corporate capacity, there is a much nearer approach to an equality of school privileges, a higher degree of excellence in all the constituents of good schools, and stronger evidence of progress than in the towns where the district organization is virtually relied on."—Henry Barnard, State Commissioner.

(1872, pp. 53-58.) "Your attention is called to the modification of the district system, in such a manner and to such an extent as to entrust the duty of hiring teachers, fixing salaries, &c., to the town's school committee."—T. W. Bicknell, State Commissioner

(1874, p. 50.) "One great fault of our present general supervision is that it is entrusted to too many individuals, so that direct, energetic and systematic action is, to a great extent, lost."—*Ibid.*

(1875, pp. 92-97.) "Among the causes to which may be ascribed many of the failures of our present educational efforts, no one is, as it appears to me, more powerful than the so-called district system."—Thomas B. Stockwell, State Commissioner.

(1877, pp. 100-101.) "The towns now incumbered with the district system should have as clear and unrestricted a right to abolish the districts as they had to establish them."—*Ibid.*

(1880, pp. 117-124.) "Among those who have been called to the supervision of the schools of the various towns of the State for the last five years, I cannot recall one person who was not before the close of his term of service a strong advocate of the abolition of districts."—*Ibid.*

(1883, pp. 133, 134.) "Next to the passage of a general law providing for the abolition of the district system is to be welcomed the change in a single town, which was accomplished in the case of the town of Woonsocket, by an act passed March 16th, 1883."—*Ibid.*

(1884, pp. 139, 140.) "The legislation of the two sessions of the General Assembly in 1884 was marked by a very decided tendency toward the establishment of the town system in place of the district system. In the first place, there was a request from the town of Johnston for an act to permit them to abolish their districts. When it was perceived that this was the third such request received within two years, it was at once seen that it was far better to pass a general enabling act under which any town could proceed, and it was accordingly done without opposition; so that to-day it is possible for any town to clear away its cumbersome district organization and organize its schools upon the same basis as it has all its other institutions, with the town as its center or unit."—*Ibid.*

(1885, pp. 128, 129.) "It is also worthy of note that since my last report was written the State of New Hampshire has, by her Legislature, abolished the district system within her borders; having become convinced that it was the great obstacle to the improvement of her rural schools in particular. The State Teachers' Association of Vermont at a recent meeting voted that in their judgment the district system must go before any general improvement of the schools of that State could be expected; and a committee, including among its members the Governor of the State and the State Superintendent of Education, was appointed to memorialize the Legislature in reference to the matter. The recent report of the State Board of Education of Connecticut finds the difficulties in the way of improving the great body of the common schools of that State to center in and around the district system. It is a question how much longer we should wait before taking a step that cannot fail to advance our school interests to a higher plane of service and value."—*Ibid.*

(1893, p. 28. Report of the Rhode Island Board of Education.) "In conclusion, the board desire to impress upon your honorable body the fact that, however much we may have done for the cause of education in the past, there is still much that remains to be done if we would keep our place with our sister States. While legislation is by no means a panacea for all the ills of the body politic, it is often essential to such new movements as shall give the old life the opportunity to put on the new. A law substituting the town system of carrying on the schools for that of the combined plan of town and district, where it now exists, would at once place the whole State in a position to take up and carry forward many needed reforms and improvements. Thorough gradation, careful classification, skilled supervision, wise adjustment of means to ends, and many other desirable features would then be comparatively easy of attainment. Vermont has this present winter joined the advanced ranks and taken this step, to the great gratification of all the friends of education within her borders. How much longer shall Rhode Island wait?"

(1893, pp. 180-182.) "By these means the educational work of this Commonwealth can be at once inspired with new life. No longer will questions of conflict of authority or divided responsibility arise to engage the attention and absorb the interest that should be devoted to the specific work of the schools themselves. There will be both time and labor to be given to the settlement of many questions which the changed conditions of the present day have raised, and which, until settled, stand in the way of any material progress. Our sister States are in the same condition

with ourselves, save that in some instances they have passed on one or two steps beyond us. Massachusetts has for some years had the benefit of most of the features named above; New Hampshire and Vermont have already adopted two or three of the measures; Maine has just abolished the district system. We certainly do not wish to be the last to adopt these newer methods, and hence to be the longer in reaping the benefits therefrom. This is the age of development, of rapid growth, of great activity. Educational ideas and institutions should not be an exception to the general law. Reform, improvement, do not mean the overthrow of the past, but rather its re-adjustment to new surroundings, so that it may do for this day and generation what was done for the former age. He is most truly loyal to the institutions of the past who recognizes the fact that they accomplished their work by being adapted to its needs, and hence sees that they must be re-adjusted to the demands of the present if they are to continue to be the true servants and aids of the people. Shall we not unite in the hearty endeavor to commemorate this Columbian year by giving to our educational system a new birth which shall start it upon a new career?"—Thos. B. Stockwell, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1873, '75, '87, '88, '89.)

TENNESSEE (1874, '75, '84-87).

(1874, pp. 14, 15.) "With but few exceptions the school districts in the several counties have been declared incorporated towns for the purposes intended by the various chancery courts having jurisdiction."—John M. Fleming, State Superintendent.

(1887, pp. 33, 34.) "The several incorporated cities and towns within this State may, through their boards of mayor and aldermen, establish and maintain, within their respective limits, a system of high-graded common schools."—Act of 1885.

(P. 38.) "The school district and the civil district are identical, except where the county court, through its commissioners, establish a school district regardless of civil district lines."—Frank M. Smith, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1874.)

TEXAS (1872, '74, '84).

(1884, pp. 7, 8.) "Of fifty-one cities and towns having control of the public schools within their limits, * * * only thirty-four made reports for the year ending August 31st, 1884. * * * Seventeen cities and towns have assumed control of their schools since apportionment for the year 1883-84."—B. M. Baker, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1874, '78, '86.)

VERMONT (1858, '60, '63, '64, '67, '72-74, '76, '78, '83, '84, '90-93).

(1858, p. 39.) "The multiplication of districts by division and subdivision into districts so small in territory and weak in resources as to make the support of schools a comparatively severe burden upon individuals, may be mentioned as one of the greatest hindrances to the general improvement of schools."—J. S. Adams, State Secretary.

(1863, pp. 105, 106.) "The legal provisions for territorial organization into local districts are nearly identical in the two States, so far as the Vermont law extends; but there are certain provisions in the Massachusetts law not found in the other. There, towns may at any time, abolishing the districts, take possession of the school-houses and other district property, accounting therefor, and provide school-houses and all conveniences for the whole at the general expense."—Ibid.

(1864, p. 165.) "Modifications of law recommended: Fifth—The enactment of law by which power shall be given to towns, so electing to do, to abolish all district organizations within their bounds."—Ibid.

(1867, pp. 123, 126.) "Many towns within the past five years have desired to obtain the better educational privileges that would grow out of graded schools,

through a complete consolidation of their districts, and have only failed, after obtaining a vote or a certainty of a vote for consolidation, from the difficulty of dealing with the practical question of equally distributing the existing school property."—*Ibid.*

(1871-72, pp. 275-322.) "The subject was noticed in the report of 1870, and was recommended by the board of education to the consideration of the Legislature. That year an act giving authority to any town in the State to abolish school districts therein passed the General Assembly and became a law. * * * From all the knowledge I have been able to obtain of the proceedings of the opponents of this law, in the few towns in which it has been adopted, I am inclined to the opinion that it has not had a fair, impartial trial. * * * Notwithstanding the opposition to the law yet manifest in some of these towns, the friends of the town system throughout the State are to-day as confident as ever that it is the system for this State; and that, could it have a fair trial for a few years, the people would be unwilling to return to the present district system."—John H. French, State Secretary.

(1873-74, pp. 318-398.) "The law was amended, the more objectionable features being modified or repealed; and this amended law has been before the people another two years, in which time three towns—Essex, Jericho and Corinth—have voted to return to the district system, and the town of Middletown has adopted the town system. * * * And yet the schools of only four of the 241 towns of the State, the two cities, and most of the larger villages are now pleased with the beneficent provisions of this law. This is the entire result of twelve years' discussion of this subject and of labor by its friends in the State for its adoption."—*Ibid.*

(1883-84, pp. 8, 9.) "The discussion of the town system has resulted in good. It is better understood by the people, and many who were opposed now favor its adoption. * * * If made compulsory in all the towns, I believe most of the opposition would cease, and it would at once receive the support of all the true friends of our common schools."—Justus Dartt, State Superintendent.

(1893-94.) Describes the excellent results of the township system after one year's trial.

See, also, Report of U. S. Commissioner of Education, 1886, '87, '88.

VIRGINIA (1871-77, '82-85).

(1872, part I, p. 5; part II, pp. 8-15.) "If counties continue to reduce the number and consequently to enlarge the size of the townships, some changes will have to be made in reference to districts. Either trustees must be paid, or the districts must be made smaller. The former alternative is greatly preferable. It is equally cheap and far better to pay three men to serve one large district than to subdivide the district and pay three clerks. But while too great extension should be avoided, the area should be sufficient to insure a good class of officers, and a work of sufficient magnitude to excite the interest of substantial citizens. Superior minds will often accept large responsibilities where they would not be troubled by small ones. A class of men can be induced to manage the educational affairs of a third of a county, who would not be troubled with a single school-house; if they consented to serve the small affair, so insignificant a concern would fail to call out their best efforts. Hence the importance of extending the district sufficiently to make the administration of its affairs an object of dignity and responsibility. The suffrages of the great majority of experienced school men favor the territorial identification of the township and the school district. * * * But, most unfortunately for our school operations, the township system in Virginia has not been heartily accepted or judiciously worked. * * * In a majority of the counties the size of the township was made large beyond precedent. * * * The reckless splitting of neighborhoods alluded to above was a flagrant violation of the law, and a contemptuous disregard for the educational interests of the people. * * * For reasons already given, I should look with alarm upon any movement to make the districts smaller, or break the wedlock between township and district."—W. H. Raffner, State Superintendent.

(1874, pp. 76-79.) "The county superintendents are quoted on the subject of sub-districts. In spite of the special difficulties referred to above, only eleven counties out of the forty-seven report in favor of sub-districts."—*Ibid.*

(1875, p. 11.) "The trustees manage the property and the revenues of each school district, which in Virginia corresponds with the magisterial district."—*Ibid.*

(See, also, extracts from Report of U. S. Commissioner of Education, 1880.)

WEST VIRGINIA (1881-84).

(See extracts from Report of U. S. Commissioner of Education, 1872, '76.)

WISCONSIN (1868-70, '74-84, '92).

(1868, pp. 33-35, 46, 47.) "Our first great want is the township system of school government."—A. J. Craig, State Superintendent.

(1869, pp. 25-33.) Gives the law of 1869, permitting towns to adopt the township system, with a strong argument in its favor."—Ibid.

(1870, pp. 27-30.) "It is a matter of some disappointment to the friends of the township system that the experiment has been tried in so few cases, the past year, and that it has been abandoned in some instances where adopted. This, however, is no argument against the desirability of the system. The change from the old to the new is generally slow and attended with great difficulty. Personal considerations were involved, and not the merits of the question, in the returns of the towns alluded to above to independent districts."—Samuel Fellows, State Superintendent.

(1874, pp. vii, lxi.-lxxx.) "The adoption of the township system of government would be a great advance over the present independent and weak district system. To the consideration of this subject attention is earnestly directed. * * * It is the substantially unanimous opinion of the highest educational authorities of the country that the division of towns into petty, independent districts is an indefensible source of weakness to the educational system. * * * The wretched character of the district system is *not a question*. It is a proved and admitted fact. Intelligent men have differed as to the merits of this or that scheme for the establishment of intermediate schools, but since the days of Horace Mann they have held but one opinion respecting the unfortunate subdivision of a town into sub-districts. * * * That they will be thus supplanted at no very distant day is certain. The results of the town plan are so obvious that even the force of tradition and of habit must yield at last to intelligent conviction."—Edward Searing, State Superintendent.

(1875, pp. 33-54.) "Proposes, as introductory to the township system, laws encouraging the voluntary creation of town high schools, and providing for uniform and free text-books."—Ibid.

(1877, p. lxi.) "(4) The township to be the smallest unit of territory in school government, the schools of the same to be under the management of a township board elected by the people."—Ibid.

(1878, pp. 46-48.) "The present permissive law was intended as an experiment. Though well devised in the main, it retains too much of the present system, and should be carefully recast."—Wm. C. Whitford, State Superintendent.

(1879, pp. 60-64.) "In contrasting the history of the two systems the striking fact is presented that where the independent district has prevailed and where it still obtains it has been constantly complained of by all intelligent school men of much experience as singularly defective, as standing very much in the way of general progress and the elevation of the public schools, while of the town system no such complaints have been made; it has always and everywhere given general satisfaction, the exceptions being merely in the few cases where it has been departed from, as in Pennsylvania and Iowa, in the allowance of the division of the town or the promotion of an irregular organization not embracing a whole town, but perhaps parts of towns, or only a village and some adjacent territory."—Ibid.

(1881, pp. xlv., xlv.) "The experience of the State has confirmed my conviction from the beginning that this system would never obtain, on the optional plan, a general foothold in our towns. Our citizens must accept the methods employed in other States for its adoption before its superior advantages will be known throughout our own State. A law enforcing its introduction into all towns where not now in operation would doubtless receive at first considerable opposition, but it would shortly be acquiesced in by the school districts."—Ibid.

(1892, pp. 15-17.) "*It seems manifest that the township is a better unit for the organization, maintenance and management of schools than the independent district. There are few towns in the State whose children could not be accommodated in six school-*

houses judiciously located. Nearly all towns in the settled portions of the State could support so many schools without burdensome taxation, and would furnish pupils enough to sustain interest in the schools, and to stimulate teachers to do their best work. Enthusiasm is born of numbers, and a full school is an incentive to high endeavor. Under present arrangements there are seven or eight independent districts and twenty-one to twenty-four school officers in nearly every town. The attendance in many of these schools is so meager that ill-prepared and inefficient teachers are thought to be as good as the district can afford, or the needs of the schools demand. Systems of government are never perfect, but in many ways school interests would be benefited by making the town the unit of school organization. It can scarcely be doubted that the school affairs would be managed more economically and more intelligently by a central board than they are now managed by eight or more independent boards. School taxes would be uniform, and the poorer parts would be aided by receiving more than they contributed to the general fund. This would be in harmony with our general system of government. Schools are established and maintained for the common safety and the common welfare, and it is right that individuals and communities should be required to contribute to their support according to their several abilities. Under the independent school district system the poorer districts are heavily taxed to support indifferent schools, while the wealthier ones are able to support better schools with a lighter percentage of taxation. Under the township system a course of study could more easily be adopted and followed, text-books and other material appliances would be more nearly uniform, people would send their children to the most accessible school-houses and the endless friction arising from the alteration of district boundaries would be avoided, and more efficient supervision would be secured. The town is the smallest unit in our political system excepting the road and the school district, and it is notorious that town affairs are managed more intelligently than are those of road or school districts. Experience shows that such a change in the administration of school affairs, however desirable, cannot be expected from the voluntary action of the towns themselves. Men of their own accord do not relinquish opportunities of even slight preferment. The tendency of thought to continue along well-worn grooves is patent. The indisposition of people who are untrained in the conduct of public affairs to change existing methods of procedure is well known. But these are obstacles that lie along every pathway of progress. Conservatism is baneful when it resists needed reforms. It is admitted that country schools have shared but slightly in the progress that marks every other educational agency. The margin that separates the wayside school from utter failure is dangerously narrow."—Oliver E. Wells, State Superintendent.

(See, also, extracts from Report of U. S. Commissioner of Education, 1870, '71, '72, '74, '75, '77, '84, '86, '87, '88.)

III. EXTRACTS FROM REPORTS OF THE COMMISSIONER OF EDUCATION.

(Reports of the U. S. Commissioner of Education, 1867, pp. 70-86):

1867, p. 415.) "The school district system then established had for its object the welfare of every precinct and district hamlet in the land. This measure, though energetically denounced by some modern educational functionaries, was approved universally at the time of its adoption."—Rev. Charles Hammond (extract).

(1870, p. 112, Illinois.) "The adoption of the township system is believed to be the only effectual remedy for the evil."

(1871, p. 162, Iowa.) "The township system is advocated, and the experience of other States cited in its support, while many independent reasons for adopting it are given."

(Page 173, Kansas.) "In our own State just now peculiar obstacles lie in the way of this township system of districting. The civil townships are irregular, and rarely coincide with the congressional townships. The school districts are formed without any reference to either civil or congressional township lines. The settlements are chiefly along the valleys and water courses. * * * All that the people can hope to accomplish at present, therefore, is an approximation towards the concentration and co-operation which the township system is designed to effect. To this end, two, three or four school districts could often consolidate for the purpose of maintaining a district school with the very best results."

(P. 276, New Hampshire.) "The district system works unequally and unjustly, giving the rural districts slow, poor schools, when four-fifths of the children of the State receive no further education than is afforded by the district school. The superintendent, Anthony C. Hardy, warmly urges the entire abolition of the district schools."

(P. 356, Vermont.) "Letters upon the subject are also submitted from town superintendents throughout the State, showing a general feeling in favor of the town or municipal system."

(P. 372, Wisconsin.) "The evil is one which can be remedied only * * * by the general adoption of the township system."

(P. 200, Mississippi.) "Each county constitutes one school district, but any incorporated city of more than 5,000 inhabitants constitutes a separate district. * * * The board of county supervisors and the city council of any incorporated city of more than 5,000 inhabitants, appoint six school directors in each district, for three years, who receive three dollars a day for actual service. They are made a corporate body, with power to sue and be sued."

(P. 253, Ohio.) "It is believed that the present mongrel system should give place to the purely township system."

(P. 291, Vermont.) "An enumeration of some of the prominent obstacles in the way of the efficiency of the schools, embraces fifteen different items, ten of which at least, if not more, are evidently owing to the prevalence of the district system of supervision instead of the town system."

(P. 302, Wisconsin.) "It is believed that as soon as the system is clearly understood, it will be adopted by a large number of towns, and will prove to be a great improvement upon the present system."

(1872, p. 120, Kansas.) "This [congressional township system of districting] is one of the great reforms essentially necessary to secure a harmonious and uniform

operation of the public school system of Kansas. No State which has once tried it if willing to go back to the old independent district system."

(P. 141, Maine.) "The excitement kindled a year ago by an apprehension of the loss of 'ancient rights' in the restriction of school district privileges, has largely given place to consideration of the superior value of the town plan. Lewiston, Auburn, Lisbon, Orono, and a few other towns, have abolished the district system and adopted the municipal form, with the happiest results, and with especial advantage to the outlying rural districts. Such has been the consequence wherever the change has been made—better school-houses, superior teaching, larger schools."

(Pp. 219, 220, New Hampshire.) "In June, 1870, an act was passed enabling towns to abolish school districts in certain cases. Under this act the town of Milford has adopted the town system with marked success."

(P. 271, Ohio.) "It is no wonder that a system so cumbrous [as ours] and complicated should prove a fruitful source of neglect, perplexity, misunderstanding and litigation."

(P. 336, Vermont.) "The town system is advocated by all the teachers of the State, and by a majority of the town superintendents, and the leading educational sentiment of the State is decidedly in favor of it."

(P. 352, West Virginia.) "An indiscriminate organization of independent districts is believed to be at variance with some of the prominent features of our system, and otherwise injurious."

(P. 358, Wisconsin.) "The general drift of intelligent opinion in this, as in other States, has been toward a preference for the 'town system of school government.'"

(1873, p. 40.) "Within the past year several towns have adopted the union district system. Only one town that has given it a trial has abandoned it. One has both renounced it and returned to it within a year. The erroneous idea that it cannot be advantageously introduced except in compactly-settled towns is slowly disappearing. Two towns of quite limited and scattered population have recently adopted it."

(P. 117, Kansas.) "The system of graded schools has been adopted in nine of the principal towns and cities of the State."

(P. 194, Michigan.) "The union or graded schools are exerting a very general influence over the educational interests of the State * * * It is believed that the system, in a somewhat modified form, may be introduced with great benefit in the more thickly-settled farming districts by forming the schools of the township into one under the direction of one board of officers."

(P. 235, Nebraska.) "The objectionable features of this [district] system are admitted, but it is remarked that 'in a sparsely-settled State it would be nearly impossible to adopt the township plan.'"

(P. 248, New Hampshire.) "The only effectual way to improve these schools is to abolish the district and adopt the town system."

(P. 263, New Jersey.) "A still further reduction in the number of officers can be made by adopting the township system. This change, it is believed, would strengthen still more the general school system and add greatly to its efficiency."

(P. 300, North Carolina.) "The school districts should be laid off not less than four miles square."

(Pp. 310, 311, Ohio.) "The recommendation made in the last annual report, that 'the number of local directors in each sub-district be reduced from three to one, and that the management and control of all the schools in each township be transferred to the township board,' is repeated."

(P. 354, Rhode Island.) "The board of education expresses the belief that the district system is unfavorable to the school interests of a town, and recommends that it be abolished."

(1874, pp. 156, 157, Maine [Orono.]) "In conclusion, allow me to add that I consider the workings of the 'town plan' eminently satisfactory to our people generally."

(P. 220, Minnesota.) "There can be no doubt that great advantages would result to our schools, could the purely township plan of school management be adopted."

(P. 230, Mississippi.) "It would greatly simplify matters if the separate district system were abolished, excepting in towns and cities of over five thousand inhabitants."

(P. 266, New Hampshire.) "A majority of the town superintendents and the best teachers of the State are in favor of the adoption of the town system."

(Pp. 318, 319, North Carolina.) "In each township there shall be biennially elected

by the qualified voters thereof a school committee of three persons. * * * The school committee of the several townships shall lay off their respective townships into convenient school districts, consulting as far as practicable the convenience of the neighborhood and the wishes of persons interested, and disregarding the township lines where convenience requires it; * * * shall have authority to employ and dismiss teachers of the schools within their townships, and shall determine the pay per month to be paid the same."

(P. 397, Tennessee.) "In accordance with a provision of the school law, the school districts of the State have been incorporated as towns for the purposes intended."

(P. 410, Texas.) "One of the greatest difficulties in the administration of the public school system has grown out of the disposition of directors to create a multiplicity of independent school districts, thus weakening the power and efficiency of the system by innumerable divisions. To obviate this difficulty the superintendent suggested the annulling of all former action in this matter, and the division of counties into school districts corresponding in boundary with the magistrates' precincts. In order to preserve the representative spirit of the law, it was recommended that the legal board of trustees for each district appoint, as coadjutors to themselves, three local trustees for each school in operation. In most of the counties the directors were ready to adopt the plan suggested, and their action has, with one exception, given satisfaction."

(P. 417, Vermont.) "The [township] law should be so modified as to make it binding upon all the towns of the State, at least for a term of years sufficient to give it a fair trial, or else it should be repealed."

(P. 450, Wisconsin.) "The wretched condition of the district system is not a question. It is a proved and admitted fact."

(1875, p. 377, Rhode Island.) "The commissioner, therefore, recommends the passage by the Legislature of such an act as shall grant to every town the right, by vote of the citizens thereof in legal town meeting, to abolish its districts and make such changes and transfers of property as shall be useful."

(P. 453, Wisconsin.) "The superintendent gives an outline of a scheme of such a system as he thinks will accomplish the desired results. The main feature of it are * * * the township system of school government."

(1876, pp. 78, 79, Illinois.) "Then [1837] * * * an act * * * made provision for * * * the election of five township trustees of schools in place of the three trustees of school lands; * * * for their subsequent superintendence of 'the business and affairs of the township in relation to education and to schools generally.' * * * February 26th, 1841, came a complete revision of the school laws, restoring the three township trustees of school lands. * * * As many of these schools as the inhabitants should desire were to be established in each school district, and for each school organized three trustees were to be elected, to have a general supervision of its management. The rather anomalous provision, almost peculiar to this State, of three school directors to be elected in each district of an incorporated township for a term of two years, was also introduced into this law; these directors to be additional to the three trustees of each school and to the five township trustees of schools, and to have the care of building school-houses, supplying them with furniture, employing teachers, visiting the schools, making regulations for them. * * * [The law of February 15th, 1855,] retained * * * the same township and district school boards. * * * The system thus inaugurated continues, substantially, the State system to this day."

(P. 154, Maine.) [By the law of 1821] "in each town and plantation there was to be chosen, at the annual meeting, a superintending school committee, * * * whose duty it should be to examine school masters and school mistresses proposing to teach school. * * * For each school district there was to be chosen, at the annual town meeting, an agent, whose duty it should be to hire duly-licensed school masters or school mistresses. * * * The several towns and plantations were authorized to determine the number and assign the limits of school districts. * * * Districts were to determine for themselves, at a duly-called meeting, as to the erection, repair, furnishing, purchasing, or removing a school-house."

(Pp. 179, 180, Massachusetts.) "It was in the revision of 1789 that, in 'consequence of the dispersed situation of the inhabitants of several towns, making it difficult to collect the children in any one place for instruction, such towns were authorized to determine and define, in a town meeting called for that purpose, the limits of school

districts. A supplementary law of the next year allowed the further privilege of district taxation for school-houses. Both these concessions were merciful allowances to people in embarrassed circumstances, and the kind spirit of them is deserving of respect; but they proved to be the germ of a miserable district system, from which Massachusetts has only recently escaped, and which, too generally adopted elsewhere instead of the better township system, has been the fruitful parent of ungraded, ill-managed and poorly-instructed schools."

(P. 214, Minnesota.) "The remedy consists in abolishing the petty districts."

(P. 222, Mississippi.) "With slight amendments in 1836 and 1839, and the Revised Code of 1857, the system thus outlined [acts of 1818, 1821] seems to have prevailed until the approach of the Civil War. * * * The township trustees appear to have been the chief managers, and academies as well as common schools were aided by them in their work."

(P. 241, Nebraska.) "September, 1858, * * * the separate district plan was abolished and a township plan adopted. * * * In his first report to the Legislature, January 4th, 1860, he [William E. Harvey, State School Commissioner] says: 'Much difficulty has been experienced in the organization of our common-school system from the indefiniteness of the word "township" in the law, and as there are no civil or municipal townships in the territory, and no law for their organization, but little could be done outside of the incorporated cities and towns.'"

(P. 254, New Hampshire.) "Down to the present century the town was the school unit. * * * But in 1805 (December 28th), again following the lead of Massachusetts, an act was passed to empower the towns to divide into school districts. * * * And so, for the sake of having schools within easy reach of the pupils, a system has come in which has hindered proper grading, has divided schools almost into nothingness, has made it impossible to secure for half of them good teachers, and has given over the supervision of them, in a great degree, to such persons as could be had, rather than to such as would be most desirable."

(P. 277, New York.) "The Superintendent believes that the necessity for the present system has ceased, and that the schools would be materially benefited, the quality of the instruction improved, the attendance increased, and supervision made more thorough by adopting the township system."

(P. 412, West Virginia.) "This system [of 1863] embraced the officers before mentioned, with township boards of education, and, after 1866, district trustees appointed by those boards. * * * The law [of 1873] retained * * * the township boards of education, but as embarrassments had grown out of having three trustees in the districts into which townships had been divided, only one trustee for these was now allowed, and he to be elected by the people of the district instead of being appointed by the township board. The township, too, was now again made the one school district, as it had been originally under the laws of 1863 and 1865, and former districts were made sub-districts."

(P. 268, Wisconsin.) "Any town in this State may, by a vote of the inhabitants, adopt the township system. * * * 'That portion of the people of the county [Chippewa] who conduct their schools upon the township plan, are well satisfied with them. On comparison, it must be admitted that these schools excel all others. The fact is undeniable.'"

(1878, p. xl.) "In Ohio, very active measures are in progress for the improvement of the district schools. * * * President B. H. Hinsdale presented three public reforms as calling for speedy legislative action: (1) The creation of the township system."—John Eaton, Jr., Commissioner.

(P. 130, Minnesota.) "The superintendent advises the adoption of the township system"

(P. 150, Nebraska.) "As a remedy for the evils often resulting from a too minute division of districts an amendment to the law is suggested providing that before a district is divided there be a two-thirds majority petition to that effect required, instead of a simple majority, as at present."

(P. 157, New Hampshire.) "Many towns are agitating the question of a consolidation of districts, and this consolidation, it is believed, will eventually come."

(P. 173, New York.) "In his efforts to secure * * * the general adoption of the township system, which would do much to effect the improvement sought, the superintendent [Mr. Gilmour] has been only partially successful."

(P. 191, Ohio.) "The remedy for these evils, Mr. Barnes believes, is to place the schools of a whole township under control of a board of education."

(P. 205, Pennsylvania.) "The township is the ideal rural school district, but independent districts, composed of parts of townships, are allowed."

(P. 234, Texas.) "The two features which distinguish it from similar laws in most other States, namely, the community instead of the district system, and the plan of general appropriation instead of local taxation, are favorably regarded by the people. The community system, not unknown in other States, though differently designated there, is one which allows of a voluntary association of contiguous families for the support of a school or schools, and the education of their children, without regard to the customary district lines."

(1879, p. 15, California.) "Owing to the incapacity or frequent neglect of local school officers, one-half of the school money is wasted, a difficulty which he [Superintendent Carr] thinks might be obviated by substituting the township system of supervision."

(P. 104, Massachusetts.) "Secretary Dickinson * * * urges the maintenance of the town system."

(P. 167, New York.) "The superintendent is satisfied that educational interests will be promoted if this [township] system prevailed throughout the State, but he considers that it would be unwise to make sudden radical changes, and suggests that the Legislature pass an act conferring on legal voters in towns the right to change from the school district system to the township system"

(P. 238, Vermont.) "Quotations are given from eminent educators to show the superiority of the town over the district system, and the superintendent [Edward Conant] gives it as his opinion that the latter system is a hindrance to the maintenance of good schools and to the improvement of all that makes them good."

(1880, p. 90, Iowa.) "The same law [of 1872] authorized the formation of independent districts from the sub-districts of a township whenever desired by a majority of the electors. In 1876 provision was made for the substitution of the township system for that of independent districts, at the will of a majority of the voters in the civil township."

(P. 126, Maine.) "In 1870 a law was passed authorizing towns to abolish the school districts and conduct the schools on the township plan, but it does not seem to have been extensively acted on, the district system still largely prevailing."

(P. 318, Vermont.) "In 1870-71 towns were authorized to abolish their school districts."

(P. 326, Virginia.) "In 1877-78 arrangements were made to determine the boundaries of sub-districts for white and black schools."

(1882-83, p. 95, Maine.) "The abolition of the outgrown, wasteful, inequitable and iniquitous school district system, is said to have made slow progress during the year; only two towns having changed to the town plan."

(P. 109, Massachusetts.) "The only notable legislation of the year was an act to abolish at the close of 1882 the district school system, which for many years has been an incubus on progress in the little country neighborhoods where it had survived."

(P. 193, North Carolina.) "The State Superintendent says that the people demanded a division of districts into smaller ones, each one wanting the school near his house; that the county boards, yielding to the pressure of petitions, divided a district already too small into two."

(Pp. 200, 201, Ohio.) "A very suggestive comparison in the State report shows that it costs more by two dollars and forty-six cents per pupil to educate the children of Ohio than those of Pennsylvania for the same time. About the same proportion is shown by a comparison with Indiana and Wisconsin. The commissioner [D. F. De Wolf] repeats the recommendations of last year for new legislation: (1) to place the schools of each township under a single board of education"

(1883, '84, p. xxxiv.) "The experience of the country showing the advantages of the township system over the district system has been constantly noted in these reports. The movement in favor of the former is extending. Mr. Patterson, of New Hampshire, observes that several towns have adopted the system, and, so far as he knows, are pleased with the change."—John Eaton, Jr., Commissioner.

(P. 12, Arkansas.) "To remedy all this the superintendent [W. E. Thompson] urges: (5) a township system, instead of, or with the district one."

(P. 90, Kansas.) "The superintendent [H. C. Speer] says that the weakness of the school system lies in the independent districts. He suggests two remedies: organize the State on the township plan."

(P. 99, Kentucky.) "In Article VII. [of the new edition of the School Laws of 1884], which provides for 'reforming and laying off districts,' sections are added defining the area of the new district and the number of children to be included."

(P. 112, Maine.) "And the fact that Maine is thus steadily descending in the scale of school towns suggests the inquiry whether the district system, which is largely responsible for it, cannot be overthrown as it has been in other States, and the more effective township system be adopted in its place, as has been often recommended in reports from this State."

(P. 128, Massachusetts.) "The minor school districts, always a hindrance to great educational success, having been abolished in 1883, towns now form the units of the State school system."

(P. 266, Vermont.) "There was a diminution in school districts, resulting from a substitution of the town system, with its graded schools and better pay for teachers. * * * Nearly every town superintendent reporting advocates the town system. * * * At the session of 1884 it was enacted that each town in which the district system exists shall, at the annual meeting of the town in 1885 and 1886, vote upon the question of adopting the town system."

(P. 282, Wisconsin.) "Sixteen towns adopted the township system in 1882-83; four more did so the next year."

(1884-85, p. 5, Alabama.) "New legislation. * * * Three township trustees in a number of counties are provided for to have immediate supervision of the public schools in their respective townships; in some instances these are elected by the people, in others appointed by the county superintendent."

(P. 13, Arkansas.) "New legislation. (4.) The county court is given the right to form new school districts, or change the boundaries of existing ones, on a petition from a majority of all the electors in the territory of the districts to be affected by the change."

(P. 19, California.) "March 3d, 1885, the Code was amended to the effect that no new district should be formed unless the parents or guardians of at least fifteen census children (5-17), resident in such proposed new district and residing more than a mile from any school-house, present a petition to their school superintendent setting forth the boundaries of the new district asked for."

(P. 34, Connecticut.) "And that, consequently, there is need of a better organization of the school system by transferring the power of district meetings to town meetings, and by uniting the powers of school visitors and district committees in the hands of a town committee."

(P. 70, Indiana.) "The plan of school management by town trustees, conferring, as it does, large powers upon one man, has, in the case of a few trustees, proved a temptation to fraud too great to be resisted."

(Pp. 108, 109, Maine.) "Eight towns abolished the district system at their last annual meetings, and two which voted to abolish last year decided to return to the old system; so that the net gain in this direction was but six. This, the superintendent [N. A. Luce] thinks, does not express the full measure of the growth of the sentiment in favor of the abolition of the system. * * * An act of March 6th, 1885, makes the abolition of the school districts carry with it an abolition of all minor districts that have been formed by such towns in concurrence with other towns, and all districts that have been chartered by act of the Legislature. Districts thus abolished may not be re-established within three years following."

(Pp. 176-179, New Hampshire.) "The public school system of New Hampshire has entered upon a new era, inaugurated by the new legislation since 1883. The most important feature of this is the change from the old district system, which has been abolished, the town being the unit. This change was widely called for and is fully approved."

(P. 240, Rhode Island.) "Under the permissive law of 1884 one town has changed from the old district to the town system, and public sentiment throughout the State was slowly but surely changing in that direction."

(P. 265, Vermont.) "An encouraging condition of the educational condition continues to be an increasing number of towns adopting the town system."

(1885-86, p. 25, Arkansas.) "The superintendent recommends the abolition of the present school district, except those organized under the special act for cities and towns, and the making of each civil or political township a school district, under the control and management of three directors."

(P. 28, Illinois.) "The superintendent of public instruction earnestly recommends the change from the present district system to the township system in school administration."

(P. 29, Indiana.) "At first every school district was independent, with a school board of its own. This plan was found to be ineffective, wasteful and extravagant. All the districts of the township were, therefore, united into a school corporation under a responsible trustee. This is a great step in advance. Order began to prevail, and some life appeared in the schools."

(P. 30, Maine.) "The State Superintendent suggests * * * (3) a law summarily abolishing the school district system in all the towns of the State."

(P. 30, Massachusetts.) "It is the towns, and the towns alone, that can properly be entrusted with the education of its children."

(P. 33, New Hampshire.) "An act, approved August 13th, 1885, to abolish the district system and establish the town system, went into effect March 1st, 1886. New Hampshire is the third New England State to adopt this system. * * * No one can fail to see that the new law, while it may slightly restrict the privileges of a few, is framed in the general interest, and especially of the sparsely-settled districts."

(P. 37, Texas.) "Among the improvements made in the school system may be mentioned as the one of greatest importance, the 'district system,' which has been provided for a large number of counties. A great portion of the State, however, is so sparsely populated as to make the district system of doubtful feasibility, but it has been demonstrated to be superior for the well-populated counties."

(P. 37, Vermont.) "The question of 'the town system' of public schools has excited more interest during 1885-86 than any other pertaining to school matters. There is a deep conviction that the success of the common schools and the progress of education in the State depend very largely upon the decision of this question. It is greatly to the credit of the town system that it has proved a success in nearly every town that has given it a five years' trial."

(P. 39, Dakota.) "Eighty-three counties of the Territory are included in this report, sixty-eight of which are under the 'township' and fifteen under the 'district' system. * * * By reason of the imperfect and unsatisfactory condition of each of these systems, many independent districts have been created, and quite a number of the cities, towns and villages are organized under special laws, all of which tend to carry confusion into the general school system, and present difficulties in the way of its satisfactory administration. There are some very earnest supporters of the township system in the Territory. The feeling in favor of the district system, however, has grown most rapidly, and is said to be strongest in counties where the township system has been tried."

(P. 53, Arkansas.) "Any incorporated city or town in this State, including the territory annexed thereto for school purposes, may be organized as a single school district."

(P. 117, Mississippi.) "No school district can contain less than twelve square miles, nor less than forty-five educable children, except where too great distance or impassable obstructions would debar children from school privileges, in which case a district containing not less than twenty children may be established. Any incorporated town of 750 or more inhabitants may constitute a separate school district, if the mayor and aldermen so elect."

(P. 124, Nevada.) "Each county is divided into school districts, but each village, town or incorporated city constitutes but one school district."

(P. 185, Wisconsin.) "Every town which is now or may hereafter be organized in this State is hereby declared and constituted one school district for all purposes in this chapter hereinafter described. * * * The clerks of the several sub-districts * * * shall constitute the town board of school directors."

(Pp. 193-195, Dakota.) "Every organized school township is hereby declared a distinct municipal corporation for school purposes, by the proper corporate name of school township. School townships may be organized in any county, whether townships are organized for civil purposes or not. School townships may or may not

conform in respect to their boundaries to those of civil townships, and may or may not bear the same name. All civil townships now organized shall become school townships by the election and qualification of the officers thereof as hereinafter provided. * * * Hereafter all school district officers shall qualify as herein required for township officers in all respects. Officers of school townships and of school districts shall hereafter be deemed township officers within the provisions of the political code. There shall be no districts or sub-districts or any territorial subdivisions of a school township. * * * The adoption of the system herein provided * * * shall not have the effect to discontinue, abolish, and render null such school districts in their organizations as they may now exist in any county, but they shall continue to exist and their officers to act as such until all matters between the district and the township are adjusted and the property delivered."

(1886-87, p. 117, Connecticut.) "A bill was introduced at the last session of the General Assembly, providing for the control by every town of the schools within its limits."

(P. 119, Dakota.) Refers to modification of township school system.

(P. 151, New Hampshire.) "The town reports, with hardly an exception—and many of them were prepared by boards hostile to the law when elected—comment favorably upon the results of the new system. There has been a more equitable distribution of educational opportunities than formerly, and, as a rule, better teachers have been employed and more careful supervision given to their work."

(P. 170, Wisconsin.) Provision is made for organizing independent school districts when a town having the township system votes to abolish the same.

(P. 208.) More accurate and reliable statistics under a township system.

(P. 132, Kansas.) Unsatisfactory operations of the district system.

(P. 140, Maine.) Inefficiency of district system.

(P. 144, Michigan.) Objections to district system.

(P. 165, Vermont.) Laws relating thereto.

(Pp. 173-175.) Discussion of, chiefly by State Superintendents.

(1887-88, p. 93, Arkansas.) "If the directors were chosen from the entire township, much better officers could be selected, and there would be less probability of designing men getting control of the school affairs in order to defeat a school tax or give a teacher's place to some dependent relative, as is too frequently the case at present."

(P. 97, Dakota.) Township system recommended.

(P. 101, Delaware.) "The efficiency of the schools would be very much increased by abolishing the school districts, adopting what is called in the Western States the township system."

(P. 115, Michigan.) "A resolution was presented and unanimously adopted at the State Teachers' Association, that the highest interest of the schools demand that the township be made the unit of the educational system instead of the district."

(P. 117, Minnesota.) "The present school district system should be abolished and township system adopted."

(P. 125, New Hampshire.) Good results following adoption of township system.

(P. 151, Vermont.) The adoption of township system advocated.

(Pp. 157-159.) Discussion of by State Superintendents and others.

(P. 430, Michigan.) Township system desired.

(P. 1098, Illinois.) Township system favored.

(P. 1104, Maine.) "By making the change [to township system] equality of taxation, better teachers, better supervision, better school-houses, economy of taxation and longer school terms would be secured, and many unnecessary schools would be abolished. A large majority of intelligent and influential citizens of the State are in favor of the change."

(P. 93, Arkansas.) Abolishment of district system recommended.

(P. 97, Dakota.) Single argument in favor of.

(P. 142, Rhode Island.) Abolishment of district system desired.

(P. 152, Vermont.) Abolishment of district system desired.

(P. 155, Wisconsin.) "Superintendent Fair thinks that it should be considered whether the schools are not failing to accomplish what should be expected of them on account of their adhering to the old district system—a system which may have served a useful purpose, in its time, but which is now being abandoned in many States."

(1888-89, p. 642.) Here are given a number of strong arguments favorable to the township system, as the result of actual trial.

(P. 703, Connecticut.) New legislation in Connecticut.

(P. 704, Dakota.) "Another disadvantage has been the lack of uniformity in school system; seventy-two counties operating their schools under the township plan, and sixteen under the district system. This has been a cause of much annoyance, but it is very probable that the township plan will soon be generally adopted."

(P. 711, Iowa.) "The adoption of the township system of organization is strongly urged. It is remarked that if the people of the State would be made to understand how much time and money and strength is wasted in carrying the present complex system into effect, and how much the efficiency of the schools could be increased by the adoption of the civil township as a unit, they would demand that the Legislature take immediate steps toward accomplishing that result."

(P. 731, New Hampshire.) "The number of small schools under the town system is still increasing. The last year twenty-one were dropped. As a consequence the number of graded schools is increased sixteen and the number of high schools two."

(P. 715, Maine.) "Seven more towns have discarded the district system and adopted the town system instead."

(P. 742, Rhode Island.) "The board of education renews its former recommendation, which was also indorsed by the Governor in his message to the Legislature, that steps be taken to secure the abolishment of school districts. All the school officers of the State, as well as every State superintendent in New England, speak in favor of the change."

(1890-91, p. 1076.) "Never for a moment have I doubted the wisdom of the township law, or of its ultimate success, for if we can gain time for prejudice and partisanship to subside, the majority will usually support the right."—State Superintendent Patterson, Maine. "While many persons hold to the theory that the town system of school management is a good thing for the schools in some towns, but not in all, that for purely rural and sparsely-settled towns the district system is preferable, yet such theory is not backed by actual experience. There is no class of towns in the State that have not their like among the 142 towns whose schools are now managed under the town system; and among these towns there is not one, how rural and sparsely-settled soever it may be, whose schools are not, on the whole, better and in the way of more rapid improvement than those in similar towns still adhering to the district system."—State Superintendent Luce.

(New York.) "I have no hesitation in saying that it is my belief that if the township system of schools were once in operation, it would greatly promote the efficiency, as it would more equitably distribute the cost of our rural schools."—State Superintendent Draper.
